with the intent to transmit on that "Commercial Frequency" would
illadvised. Commercial Radio Services like Marine, Aviation, Land
Mobile, Public Safety, ect, REQUIRE that the equipment be
"Type Accepted" by the FCC to be used in the US. Type Acceptance
is designed to make sure the radio in question, meets ALL the
Hardware and Emission Requirements, of the 48CFR Rules for that
Radio Service, which may or may not be different for each Service.
Some Radios may be Type Accepted for multiple Radio Services,
but not in others, depending on requirements of each Service Rules.

A couple of minor points here. The term, "Type Acceptance" has not
been used by the FCC for several years. It is now called,
"Certification."

And make that CFR47, not CRF48 http://wireless.fcc.gov/rules.html

Other than those two points, you are right on target.

3662. Programming Yaesu FTH-7009??

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-07 23:15:28 UTC
From: mike <spamme0@go.com>
Message-ID: <kQPBg.5468$hj4.1623@trnddc03>
Source record: 8048
Cross-posted to: rec.radio.amateur.equipment,alt.ham-radio.mods

I need to reprogram a Yaesu FTH-7009 handheld.
Downloaded vertex.zip
Found several schematics for radio interfaces, but
they disagree on whether to invert the return data or not.
Tried both.
Microphone socket seems to be three-pin, with mic on tip, ground on
ring, ?? on shield. Tried several variations of hookup.
No joy. SW just sez "problem with connection".
Scope shows nothing on the line...yes, used digital storage, I didn't
miss it.

Of course, the websites are Russian. Pasting into a translator
didn't help.

Can someone supply the schematic for a working interface with
exact details on wiring of the radio plug and what, if anything,
has to be done on the computer side to make the rs232 port open?
thanks, mike

An interesting question.

I'm sure it's OK to modify commercial radios to transmit in the ham
bands. I do not think the reverse is true.

A good example is a ham modifying a 10 meter amplifier to use on
CB...this is certainly NOT legal.

An email to ARRL should verify this. I recently got a very concise
answer to a question regarding antenna height and airports.

<snippety>

Actually, that latter part is NOT accurate. I speak as one who has
been in the land/mobile radio service field for 10 years, and an active
hamateur for 27.

In order to be 'legal' to transmit on commercial frequencies (those
governed by FCC Part 90 regs), the rig involved must be 'type accepted'
by the FCC. This means that its overall design is reviewed by the
commission's engineers, and is certified to operate correctly under Part
90.

Among the other requirements of this part, it specifies that the
radio involved cannot be easily reprogrammable by the user. This means
that frequency programming via front panel keypad, for example, is a big
no-no.

The one exemption I know of is that of modification to transmit on
MARS or CAP frequencies. Since the requirements for the former are
dictated by the military, and the latter by the CAP themselves, the FCC
does not get directly involved.

So, in summary: Operation of a non-type accepted (read: amateur)
transceiver on commercial frequencies is indeed illegal. However,
operation of a commercial radio on amateur frequencies is perfectly
legal, as long as one holds an appropriate amateur license.

Operation of an amateur radio on MARS or CAP frequencies is
probably OK as long as you're authorized for such (as in being a MARS or
CAP member), and your radio meets the technical standards of MARS or
CAP. Someone from one of those organizations would be a better one to
ask.

> If so, can someone point me to a website, whether on the FCC's site or
> ARRL's site or someplace else that shows this? Again, I assumed it was
> not legal to use a modified ham radio on such non-ham frequencies, but
> I've heard from others that it is. Just wanted to clear the air.

Of course. The section that you want is 90.203. Here's a link.

http://frwebgate.access.gpo.gov/cgi-bin/get-cfr.cgi?TITLE=47&PART=90
&SECTION=203&YEAR=1998&TYPE=TEXT

Or, if that one screws up due to its length...

http://makeashorterlink.com/?P1425178D

Happy researching.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

We've moved SolderSmoke to a new web site host (please
let us know what you think of the new host):

http://www.soldersmoke.com

Topics discussed in SolderSmoke #29:

-- A PC board box for Bill's FET final
-- Richard Feynman video clip
-- Mike's amazing Octopus oscilloscope aid
-- Another plea for graphics help (SS logo)
-- Overcoming podcast tech difficulties
-- FIRST EVER SolderSmoke EM wave poetry:
from The Moody Blues
-- SolderSmoke Mailbag: Tony Fishpool and the GQRP
club

Listen and download at: http://www.soldersmoke.com

Background:
Tired of listening to Led Zepplin or NPR on your
I-Pod? Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in
London, England meet regularly on the ECHOLINK system
to discuss their homebrew radio projects. We are
making them available as PODCASTS.

NEW RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software. In order to subscribe to
SolderSmoke, point your podcast software to:

http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your

computer.

http://www.soldersmoke.com

That's the new the homepage for our show. All our programs are available there.

We hope you enjoy the program. Please send us feedback.

Mike,
I have a working interface and the vertex s/w works just fine.
Mic socket - I use a miniature 2 way, data on tip, ground on sleeve.
On computer I just use COM1, no set up required.
Mail me off list if you need any more info.
Regards,
Eddie

It's likely legal to modify the radio. It's pushing the transmit
button that would be illegal.
mike

3670. FS: Very rare National MB-40-L

I'm not getting any younger and it's time to clean out the stuff
that's not going to get used anytime soon.

This is a National multi-band tank circuit that tunes 80-10 meters
with one turn of the shaft, without a bandswitch. Ideal for tuning
the input of that big linear, incorporating into a low-power antenna
tuner or whatever.

I believe these were originally rated for 10 watts, but I think it
should handle more than that from the looks of it.

Photo at: http://www.k6mhe.com/n7ws/MB-40-L.jpg

Asking $50 and I'll pay the shipping in CONUS.

Email n7ws@yahoo.com

73,

Wes

3678. Winding some RF coils and transformers - scramble-wind??

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-09 04:46:58 UTC
From: "patrickantoun@gmail.com" <patrickantoun@gmail.com>
Message-ID: <1155098818.598858.120350@p79g2000cwp.googlegroups.com>
Source record: 8064

hello everyone,

i'm trying to build a transistor theremin by following an article
written by dr. bob moog in 1961. the only problem really is the RF
coils and transformers; he gives specific instructions on how to make
them by winding them yourself.

you can see the schematic here:
http://moogarchives.com/there61b.htm
http://moogarchives.com/there61c.htm

first he says to wind the coils on 1/2 inch diameter slug-tuned coil
forms. can anyone tell me where i can find these or if there's
something i can use instead.

next he mentions that some of the windings need to be "scramble wound".
could anyone please explain to me what that means or show me a picture
of what that looks like.
also if anyone has some general information or tips on winding rf coils
and transformers, i'd greatly appreciate it.

thank you so much,

patrick

"scramble wound" means just what it sounds like.
uneven placement of the turns across the coil space
as contrasted with careful placement of the wire in
nice neat layers.

3685. Problem with 3-500 Filament Pins

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-10 02:26:05 UTC
From: David Thompson <thompson@mindspring.com>
Message-ID: <1PwCg.2290$Qf.1237@newsread2.news.pas.earthlink.net>
Source record: 8071

I have a LK 500NTC (no tune) amp that ran well for several years. Now one
of the 3-500Z's (both Eimac)
filament pins came unsoldered.

K4DLI helped me resolder the pin with a torch and silver solder. Just for a
test I swaped the tubes and within a week the other tube had unsoldered.

I had this problem in a Henry 2K with the tube not fully sitting in the
socket but the 3-500Z's are firmly in the socket. I have a new tube socket
to install but is this the only problem? I really see nothing wrong with
the old socket. Filament voltage is 5V as it should be
on all pins.

Ideas?

Thanks in advance.

Source record: 8073

Hi David from Ken in the UK,

This is a common fault with these valves (tubes).
It's due to heat built-up over time.
The only solution that I know of is to blow cold air up around the valve pins.
One final point, to extend the life of the '500Z' is to lower the heater voltage to around 4.75v. This will save the valve from premature filament failure.

Hope this helps, cheers, Ken, G4KIR.

Seems like you already know if the contact in the socket is "leaking" the
filament pin will get hot. It's not hard to check.

3688. Drake TR-4CW RF TUNE problem.

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-10 17:34:11 UTC
From: Bent J�rgensen <bjoe@post5.tele.dk>
Message-ID: <44db6e16$0$20344$edfadb0f@dread16.news.tele.dk>
Source record: 8074

Hallo

I got a problem with my drake TR-4CW.
Hopefully someone can help.

It is not very much used.
But suddenly it was not possible by help of the RF tune control to get maximum noise or signal when it pointed on " 12 o'clock'' +/-. No resonance.
The problem is on 20 and 10 mtr.
No problem on 80, 40 and 15 mtr.

The problem is not only on receive , but also in transmit mode.
That means I can not use the transc. on 20 and 10 mtr. before this is solved.

Testpoint "TP" related to ground:
80m: 1.26V DC
40m: - 1.60V DC
20m: 1.26V DC
15m: - 1.16V DC
10m: - 0.8V DC

What do these values tell you?

Thanks for good advise.

Best regards

OZ5ZD, Bent

3689. For Sale: Swan, National, Kenwood, Heathkit, Ten-Tec and More

Here are some items for sale. Prices do not include shipping. I will
ship overseas.

Swan 600R Custom Receiver with SS-16B Filter....$350 plus shipping
This radio covers 80-10 meters and matches the Swan 600T transmitter.
The custom model comes with the Noise Blanker, Variable Notch Filter,
and 16 pole SS-16B SSB filters.The radio is in excellent condition and
receives well. The insides of the unit are also very clean. The power
transformer has been replaced and the new one can be seen in the last
photo. The only other issue is that one of the disks is missing from one
of the knobs.
http://members.cox.net/radiodx3/swan600r.JPG
http://members.cox.net/radiodx3/swan600r4.JPG
http://members.cox.net/radiodx3/swan600r3.JPG

Rareï¿½ National Radio NC-45.............$125 plus shipping
This is an 8 tube receiver made from 1941-1945 covering 550 kHz to 30
MHz. Most models made were made the NC-45 which is an ac/dc receiver.
The NC-45A has a transformer operated power supply. This radio does work
and receives signals on all bands but it really need to be recapped and
aligned. Cosmetically OK but also needs to be cleaned up. It has all of
the correct knobs and I do not find any extra holes. The insides look
OK but also need to be cleaned up. One interesting thing that I noticed
is that the main tuning and bandspread knobs are both weighted, rather
heavy and appear to have come from the factory that way. I do not have a
manual but they are available from several sources on the web. I will
include a schematic.
http://members.cox.net/radiodx3/nc45rcvr.JPG
http://members.cox.net/radiodx3/nc45rcvr4.JPG
http://members.cox.net/radiodx3/nc45rcvr6.JPG

Kenwood TS-520 Transceiver..............$120 plus shipping
The unit is in very nice shape cosmetically and is compete. The receiver
works very well but the transmitter is not working. The insides are
complete and in good condition.
http://members.cox.net/radiodx5/ts520.JPG
http://members.cox.net/radiodx5/ts5204.JPG

Motorola 51X19 Wooden Table Radio-Brown Plaskon Grill...$100 plus shipping
This is a 5 tube radio from 1942. New electrolytics and most of the
paper capacitors have been replaced. The set plays well. Cosmetically it
is in in nice shape although their is a small chip out of the top near
the edge which can be seen in the photo and the plaskon grill has been
carefully glued where it had cracked.

http://members.cox.net/radiodx5/motorola51x19.JPG
http://members.cox.net/radiodx5/motorola51x194.JPG

Ten-Tec Power Mite PM3 and Matching AC Supply.....$200 plus shipping
TenTec Power Mite and Matching AC Supply with instructions and original box. This is a late 1960's - early 1970's 2 band QRP transceiver that covers 40 and 20 meters, CW only. Output power was measured at a couple of watts. The radio works and is in pretty nice shape with a few small scratches.
http://members.cox.net/radiodx5/tentec_power_mite.JPG

Harman Kardon A-10 Allegro Vintage Hi-Fi Amplifier....$60 plus shipping
This is a mono unit with a pair of two 12AX7's driving a pair of 6BQ5's. The rectifier tube is a 6V4. I powered up the unit and it has bad hum so it needs new electrolytic caps. The unit is in nice shape and includes the original box but no manual.
http://members.cox.net/radiostuff9/allegro_hk.JPG
http://members.cox.net/radiostuff9/allegro_hk3.JPG

Heathkit IM-10 VTVM.....$20 plus shipping
The unit is working. It does not include test leads. The test lead uses a standard 1/4 inch plug which is included and banana plugs which can be obtained from Radio Shack.
http://members.cox.net/radiodx3/heathim102.JPG

Big Steel Louvered Cabinet - 19 inch Rack Panel for Homebrew xmtr or Linear Amp.....$50 plus shipping
This enclosure has a hinged top also. The dimensions are 22 inches long by 10.5 inches high x 16 inches deep. The size of the front panel that will fit this is 19 inches wide by 8.5 inches high. Other than some dust, this is in excellent condition and would be a great enclosure for a homebrew ham radio transmitter or linear amplifier.
http://members.cox.net/radiodx3/big19inchcabinet.JPG
http://members.cox.net/radiodx3/big19inchcabinet2.JPG
http://members.cox.net/radiodx3/big19inchcabinet3.JPG
http://members.cox.net/radiodx3/big19inchcabinet4.JPG

Steel Project Enclosure for Transmitter or Receiver....$15 plus shipping
A steel box which would make a nice enclosure for a homebrew receiver, transmitter or antenna coupler. The dimensions are 15 inches wide by 9 inches high by 11.5 inches deep. Their are no dents or dings, it just needs a cleaning.
http://members.cox.net/radiodx3/box2.JPG

Systron Donner Digital Multimeter Model 7241A (DVM).....$20 plus shipping
This unit will measures ac and dc voltage, dc and ac current and resistance up to 20 Mohms. This is in nice shape and is working. I checked it with a dc power supply and a resistance decade box and the readings look good. It also has a tilt up stand. Uses a standard computer type power cord which is included.
http://members.cox.net/radiodx5/systron_dvm.JPG

http://members.cox.net/radiodx5/systron_dvm3.JPG

General Electric YGA-4 Audio Oscillator.....$20 plus shipping
This has been tested and is a working unit.
http://members.cox.net/radiodx3/ge_audiogen.JPG
http://members.cox.net/radiodx3/ge_audiogen2.JPG

73 and thanks for looking......Dave

Nice older 2-meter multimode. CW, USB, LSB, AM and FM transceiver.
Min. 10W output. I've used this rig with external amps to run meteor
and tropo scatter and EME.

Been keeping it to get back on EME but health issues are preventing
the construction of new antenna.

Asking $225 including shipping to CONUS.

email:n7ws@yahoo.com

Thanks and 73,

Wes

Regarding your filament problem. Look for the November and December 1990 QST, "Circuit improvements for the Heath SB-220 Amplifier Part 1 and Part 2." Your answer is there. For example: One weakness in the SB-220's cooling system is that the infared radiation (heat) reflected back into the tubes from the bright aluminum surfaces adjacent and parallel to the anodes shortens tube life. This deficiency is easily corrected: After removing the tubes, apply black liquid shoe polish to the vertical aluminum surfaces near the tubes. In the design of your Amplifier, are the filament pins facing each other so the air from your blower is creating the maximum cooling? Does the blower direct the flow of air above and below the chassis at the same time? These criteria are important. The fans have to be lubricated at least once a year with thin non gumming oil such as Hoppe's no. 1003. A drop or two will do, more oil is not better, just messier. 73, Bob, VE6RI.

Hello,

When my 790 receives on the subband and i transmit on the main VFO
then audio from the subreceiver is leaking to the main-vfo into the
transmission.
I tried to receive on different VFO's but nothing helps.
I know that there's is a fix for it but i do not have the link anymore.
Any suggestions ?

I heard a rumour on the air that Kenwood is quitting Ham Radio.
Can that be possible true? The TS-480 was truly excellent and
the TS-2000 really an innovation.

Would be a sad loss.

I still use a TS-450-sat and love it. I also sent them an e-mail. We
shall see.

That would be a shame. Their rigs have always offered
good performance and value. Wouldn't suprise me if
they did leave the market though. To say its a limited
market is an understatement.

Well, ARRL is pushing ICOM, as Icom is "sponsoring" stuff for them. Looks like
old fashioned kickbacks to me, but it seems unfair to the competition.

I owned an ICOM......once.

IMHO, Kenwood makes the best HF rigs, and Yaesu makes the best V/Uhf stuff.
but then I have only been licensed since 1984, so what do I know.

I have always been an Icom person, but there are some things Kenwood
has that Icom doesn't have anything close to. In particular, the
TM-D700A, the TH-D7AG and the TH-F6A. I have all three.

I don't think Kenwood has anything close to the Icom-7800 for HF. Of
course for $15,000 one would expect a lot.

I have been licensed since 1951, so you're probably right. :-)

The big differance is that Kenwood produces other electronic items, but Ten Tec's only produce ham related items as far as I know. TT has to keep doing somethig to sell the rigs or go out of business all together.

Amateur radio equipment is a small part of Ten-Tec's
business. Their radio equipment line also includes
commercial and military applications. In addition.
they sell a lot of enclosures, as well as tool and
die equipment.

3725. FS: AN/GRC-215 Military Radio HF SSB Shortwave (NOT posted on Ebay)

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-14 19:21:00 UTC
From: scr300 <scr300@comcast.net>
Message-ID: <sd6dnfmQstmCUH3ZnZ2dnUVZ_tKdnZ2d@comcast.com>
Source record: 8011
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.swap,rec.radio.swap

Hello. I have for sale a military HF shortwave SSB transceiver, military designation AN/GRC-215

The radio covers 2 MHz to 30 MHz in 10 Hz steps, using a high-speed DDS synthesizer.
It is capable of USB, LSB and CW as well as data.
It comes with EVERY interconnect cable and runs directly from 110V AC or 220V AC. RF output power is 500 watts+, produced by four leisurely-running parallel RF amplifiers using two MRF150 MOSFETS each, with phenomenal linearity and carrier-to-noise performance.

The GRC-215 was developed for deployment in the Western-European Regency Net (in wartime called the FAN or Flaming Arrow Net). This net was targeted to be a tactical "nuclear hardened network", based on shelterized mobile units to maintain shortwave communications on the battlefield when all else has failed (read: After a nuclear conflict). See also
http://www.fas.org/man/dod-101/sys/land/regency-net.htm
Needless to say the radio therefore is built like a battleship, it probably has cost the taxpayer hundreds of thousands of dollars, and it shows.

The regency network was supposed to be deployed in Europe at the end of the eighties but when the wall came down and the Cold War ended, deployment never happened, and the equipment was surplused.
As such, my GRC-215 is NOS, unused.
If you are into collecting military radios, look no further. You will not find a better military HF radio. Only the best components have been used throughout. To give you an example, EVERY RF path in the transceiver is switched using high-speed Kilovac vacuum relays, in both the receiver and the transmitter. There must be like 30 of these relays used throughout the radio, NO switching diodes are used anywhere in the RF paths. The use of these vacuum relays allows fast frequency hopping under full power conditions, but also normal single-frequency operation is possible

It has a microprocessor controlled RF pre-post selector that gives a very narrow RF passband for any frequency selected in the operating frequency range, with phenomenal out-of-band rejection BEFORE the mixers. This pre-post selector allows multiple GRC-215 radios to operate in near-vicinity at maximum power and as close as 10% of the set frequency, without mutual interference. As such, not even the Icom IC-7800 comes close to the large-signal handling performance that the GRC-215 offers.

The receiver uses two cascaded Collins mechanical filters for the ultimate selectivity. The transmitter has its own mechanical filters.
I can go on and on about the quality of this radio, but I will limit myself here to a list of the included components:

- C-11670/G control head using direct-entry keypad and green plasma display
- RT1512/G receiver-exciter (can be 19" rack-mounted)
- TN612/G Pre-Post selector (19")
- AM7296/G quad MOSFET RF power amplifier under CPU control and full VSWR protection (19")

I think that Kenwood is going away of the amateur-market.
The production of the TS950 and the 790 is ended a long time ago and is
replaced with the TS2000 ... says enough for me i think.....

Other than the D-Star radio? I don't know. Since all three major
Japanese vendors have recent models already on the market, I'd wouldn't be
surprised to not see something else about to marketed just yet.

Thanks for the info Bob. I had not looked to see what TT has produced in a while. From what I saw I still doubt that TT could make much of a go if they quit the ham business.

Cross-posted to:
rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.homebrew,rec.radio.amateur.equipment

I frequently see postings in the ham radio related newsgroups for items currently being offered on E-Bay.

All to often I that items will be shipped only to the lower 48 states, leaving hams in Hawaii, Alaska, and Canada out of the picture. What is the problem. In Canada we are well served by FEDEX and the United States Postal Service. Amateur radio equipment crosses the border with out any problem. I realize that Hawaii and Alaska may be a bit far from the "lower 48" but the same delivery services are available even though surface transportation may be a little bit slow. In the US you also have UPS, the folks in Brown which we Canadians prefer not to use because the often make the border crossing more difficult than it needs to be and we don't like getting stuck with brokerage fees.

So why the discrimination, if the buyer knows that delivery may take a little longer and is prepared to accept the fact then it becomes a non problem. If the seller is intimidated by the prospect of complicated paperwork, he needn't be. Please leave it up to the buyer to decide whether he wants to bib or not.

I can not speak for shipments to Europe, Africa, India, China, or the South Pacific but for fellow Americans, or friendly northern neighbours, I think that people should be prepared to deal with us.

Thanx for letting get this off my chest and I realize that I have cross posted this to four different newsgroups but I wanted to get to a broad audience.

Paul

Don't feel too bad, Paul. You'll often notice in the same listings that
(even if they ship solely by USPS) they will not ship to US military APO/FPO
addresses, either. We get left out in the cold even more often than any of
the above named locations. So much for supporting the troops as it were.--

USPS Air to South Africa takes 4 days from California. Customs is handled by them and it is extremely easy to use. Great service.

Americocentric sellers maybe?

Hmmm???

Hawaii is too hot?

Canada is too big?

Alaska is just right!!

But this doesn't respond to the hypothesis.

That's because shipping to an an APO/FPO is no longer a service provided by the U.S. government. At one time mail to an APO/FPO was delivered to a U.S. millitary post office that then shipped it using U.S. milltary transport, There was a good chance that the mail would actually arrive and it would be undamaged. Now APO/FPO mail is sent via the regular postal system, but the U.S. government picks up the tab.

Now, the chance of the mail arriving is much less as it stands out.

As for Paul's comments, they really don't hold any water. Small sellers don't ship outside the continental U.S. because they don't want the risk.

If an item is lost, stolen, damaged, or takes a month or two to get delivered, they can't afford to replace it, or "eat" the loss. Paul even has more problems because Canadian customs may hold an item to determine its value, or if it can be legally imported as long as they wish. They can also assess the value for sales and other taxes.

Obviously he never has had any experience clearing an item through customs. If he had he would have praised the low fees, speedy processing and general reliablity of the courier services.

Considering the general quality of things sold on eBay, the sellers are actually doing you a favor. While many of the sellers will attempt to keep you satisfied, if you have to wait a month for something to arrive and in Paul's case pay GST (general sales tax), import duty and customs clearing fees, then have to send it back, he would loose a lot.

Besides paying for shipping both ways, he would have to pay customs clearing fees at the U.S. border and prove that the item he is sending back was actually being returned to the U.S. as a defective purchase and not scamming the customs people by claiming it was.

This means that some items both of you either have to keep or pay for and never get no matter what it costs. Where do you draw the line? $100, $200, $500? If it costs $100 to ship a radio to you and $100 to send it back, it does not make much sense.

Geoff.

Been here six years, and have NEVER had anything shipped to me USPS that
hasn't gotten here, and if it was properly packed, it has always gotten here
in one piece. I pay for Priority Mail shipping, which now is only a dollar
or two more than Parcel, and I get it here in a week to 10 days.

And actually, the USPS takes our mail as far as San Francisco via regular
channels, and from there it's shipped commercial air (just like any other
air mail) to our local APO hub, and then to the mail rooms.

I have been sending to an APO for several years as my son's family is
in Europe. I agree that the USPS service has been very good. They
once lost a Jeep wheel for 3 months, but eventually it too made it to
the destination.

I see all kinds of companies that won't ship to an APO. I think they
just don't want to deal with the customs forms. It can be a PITA. In
spite of using USPS for years to ship to the same APO, about half the
time I end up with the wrong form, and have to fill out another one
after I get to the P.O. I even wrote to USPS to ask how I can tell
for sure which form to use. Their very lengthy and convoluted answer
didn't help a bit. It still ends up as a case-by-case basis on
whether to use the short form or the long form. I can fully
understand why people and companies don't want to ship to an APO.

Dick

The only possible problem is loss or damage. USPS air delivers in a few
days and for a reasonable border fee, most of which is sales tax at this
end. If the customs declaration is made out properly, stating that the
contents are amateur radio equipment and if the eBay auction price is
stated as the value, there is rarely any problem unless the merchandise
is misrepresented in the first place. There is no duty on amateur
equipment entering Canada from ANYWHERE, just sales taxes.

* High Performance! NOT High Cost
o A replacement solution for conventional
power meter and sensor.
o Simple USB connectivity to laptop or PC.
o Multiple sensors on same PC
o Light weight and easy to use.
o Good for all manufacturing and I&M needs
o Robust construction with high reliability
o No reference calibrator required.
o Measurement range from -50dBm to +20dBm up to 18.5GHz.
o Future products to 40GHz.
o Currently comes in two frequency ranges
http://www.satori-technology.com

We will be on stand 426 at the European Microwave Exhibition in
Manchester, UK, from
the 12th to the 14th of September. Come a long for a chat and see a
demonstration of our
ST series Power Meter.
We look forward to meeting you there.

The issue is cost, I believe.

For some reason sellers dont want to pay the cost to the last two
states, EVEN IF THE BUYER IS FRONTING THE FEES> DOnt know why.

I have shipped to Hawaii several times with no issues at all other than
time.

I have had no problems with Canada, other than time. Sometimes it
takes an inordinate amount of time . But you can accept that if BOTH
parties are good communicators.

Ran into a certain well known cheap-assed ham
radio bastard operator today. Everyone in the local
clubs know him. He stinks, has greasy hair, bathes
monthly (?) and is known to crash ham widow's estate
sales the day after they plant the SK. In short the guy
is a true F-N low life pig. (...you prolly already know
just whom I am speaking of eh...? grin) Drives a beat
up old car with 10 antennas on it.

Today I caught this bastard ham stinkball rooting thru the
battery recycle boxes at the local office supply store.
He dug out two Dell laptop batteries and quickly shoved them
into his dirty overalls pockets he was wearing. (The store is
staffed by college age kids who don't give a s--t anyway
so they let him clean out the recycle bins of
batteries, toner cartridges, old cellphones and other similar
stuff as it's less work for them.....good point I guess.)

Apparently this guy has already hit every recycle bin where ever
he could get away with it, and is hoping to claim all these dead
Dell batteries as his own on their recent Laptop Battery Recall Program
that's been in the news of late. Then when he gets the replacement units
he plans to re-sell them at a profit online. Talk about a cheap
opportunistic
scrounging bum! Only a smelly ex-hamfest bum who used to sell crap at
hamfests
and now scams people on e-Bay could think of something like this....

3742. FS Dentron MT-3000A Antenna Tuner

This pertains to the RUMOR that has been circulating for the last 7
years about Kenwood getting out of the amateur radio business.

Kenwood is fully committed to amateur radio and we have no plans at
this
time of closing our amateur division. Kenwood continues to design and
manufacture amateur radio for our customers. Though the market has
some
what slowed down a little, we continue to put 100% of our time, effort
and engineering skills in our amateur division and we look forward to
the continued support of these products.

Some how there's been a rumor circulating in the amateur world of
Kenwood getting out of the business. For your information, this is NOT
true at all, please pass it along to anyone who has made mention of
such rumor or comment.

3745. New Picture Gallery Additions on Elecraft Site

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-15 21:33:35 UTC
From: "Eric Swartz - WA6HHQ, Elecraft" <eric@elecraft.com>
Message-ID: <ebteau02vfh@enews4.newsguy.com>
Source record: 8031

We have just updated our Elecraft Picture Gallery with a super group of new customer pictures.

The pictures include custom machined paddles for the KX1 by WB9LPU, homebrew SO2R control boxes, SOTA mountain toping, FYBO KX1 Pics and K2 based DXpeditions to VK9X, VK9C, St. Martin, Key West, 8R1 and a host of other locations. Also check out our two featured pictures, including one of the newly discovered 'Cafe K2' in Sweeden. :-)

They reached via the 'Picture Gallery' link on the upper right side of the main page at http://www.elecraft.com

Special thanks to picture submitters: DL2KCD, DF4KV, DL3KMS, DL3ALX, DL7KCM, DL8BAG, SM7KJH, WB9LPU, DL1JET, K1EV, 6Y5/KN5G, 8R1ZUM (K7ZUM), DG2KAL, OE3ZK, DG8KAD (and bird), KD0RC, DL7JF, F5VJC (GM3SKN), KF6C, K1JD, KI4DGH, KT5X , K7TQ, KA3IXF, HB9AFI, N6IZ, N8XE, NY9H, PA3VBT, T32QS (N6TQS), W1TF, W6IZT, WA5KPA, WA7CS, SM5CBC, WH7N, W0YG (VK9CG, VK9XG) and DL2DE.

Great stuff guys! Thanks again for sending these pictures in to us.

73, Eric WA6HHQ

I don't know about any Dell recall, but I routinely go through the recycled battery boxes when I see them. I often get NimH batteries which after being reconditioned (discharged/recharged) a few times are perfectly good.

Geoff.

I recently recieved three packages, one from the US via FEDEX GROUND,
another from the US via USPS, and another from Canada via Canada Post.
They all arrived in less than a week, and I paid no customs. There are
no customs duties for ham radio equipment.

Of course the original post was "I heard there was a rumor" which means
just about anything (or nothing at all).

But, given that people are buying into it, it makes sense to counter
with more authority.

It's not clear whether you are posting as Kenwood (in which case
it would make a lot of sense to indicate that), or relaying something
you got by email or on their website (in which case you really ought
to indicate where it came from).

>

Several years ago I had a pack and ship business. one of my customers had a VCR he wanted mailed to his son some where in Alaska. The post office used a contract air carrier to deliver the mail to the island where the son lived. As the package with the VCR was being off loaded from the seaplane it was dropped overboard. It took over a month to receive payment from the USPS (he did insure the package).

As for canada, there is a problem with tracking. At least a couple of
years ago, the cost of tracking a package, when possible, was
horrendously high. In the case of the US mail or Fedex, it was
impossible. I shipped to canada and the buyer said he didn't get it.
He sent a very impolite letter the day I noticed all other items
shipped that day arrived. I know he received it and later admitted
that it was shipped to the wrong address, which I know better.

Not being able to track makes for a risk that I was unwilling to handle at the time, so I cut out shipping to canada.

As for hawaii and alaska, tracking and shipping costs were terrible to those places as well. Some items can't be shipped by air and would be shipped by ship requiring a time delay in which, again, thieves take advantage of and get their refund.

The combination of eBay and Paypal creates a haven for thieves in those areas and others. They favor the buyer and it will ultimately cost the seller more in the long run.

APO and FPO can't be tracked either. Tracking is a requirement for the eBay/paypal so-called protection.

I was once a gi. Gi's move. Sometimes it takes a long while for the gi to receive mail that has to follow him/her.

I realize that the problems are caused by the 'few', but they create a risk or null out certain protective clauses in contracts. SOme businesses can afford to go through the extra effort, wait the extra time or live with the occasional loss. A business that loses one sale in a hundred can afford the loss better than an individual who stands to lose one in the only one or two sales they make.

Ebay/paypal is too protective for the buyers and not the sellers. The law is too difficult to motivate for most of the little sales that originate from ebay. Thieves know this and take advantage of this at every opportunity they can.

>costs to Hawaii/Pr/Alaska etc I give them the deep six.
> Joe

But the costs are extra to those businesses. shipping to those
states/territories are higher than cross-continent shipping.

Only a month? Not bad, really. USPS is notoriously slow with insurance claims (but then, aren't they all?)

The tracking is not a problem, FEDEX tracking works across the borders
and the USPS and Canada Post tracking systems interface with each other
using the tracking number issued at the point of mailing.

yea, don't believe FedEx when they say they deliver to Alaska....They
only deliver to Anchortown, Fairbanks, and Juneau..... for all the bush
villages and towns, FedEx gets turned over to the USPS in Anchorage
for delivery, and there is NO Tracking after that..... FedEx SUCKS
for Alaska delivery..... Lost a Laptop to there system, no refund,
or claim was ever paid. got a letter from the Manager saying,
"So Sorry for your loss, I feel your pain." I'd like to give him
a bit of my pain, right in the ***........

3791. Matching Log-EQF CT9 software with IC756pro3 CIV interface

I have several items for sale from an estate that I am helping close out.
Items include:
1. AEA Model PK-88 Packet Controller/TNC, no manual or power supply, $20;
2. Si-Tex Model 950 Scan Marine Transceiver with mic and power cord. Works
and
puts out around 40 watts into my dummy load, Price is $40;
3. Kenwood MC35S Mobile Mic, very nice shape, works great, $35;
4. Yaesu FT-64 440Mhz Mobile Transceiver, no tone board, but outboard tone
boards are
still available. Works, with mobile mic and power cord, see e-Ham reviews.
Price $45.
All prices do not include shipping. Shipping costs will be actual from
79602. No handling fees.
Thanks, Charlie Hugg, K5MBX

Paul,

The reason is very straightforward. This is a boatanchor newsgroup
and it's mostly geezers who deal in old radios.

Geezers live in the past; WE don't think critically; the same tired
thoughts cycle through our heads. Even worse, many of us
hallucinate and make up reasons. You'll see several in this
thread.

Many geezers (to be fair, not all) are Xeno-phobic.

To them, Hawai'i is FAR away and never having been there, geezers imagine that it's a foreign country with different laws a strange language. In their minds, it's a not that far from Hawai'i to, say, Nigeria or Pakistan. Even if they could call the Honolulu police to report a deal gone bad, they would not be able to speak to them with finding a translater.

On the other hand, a geezer thinks, OK, I'm in Virginia, if a $30 deal in Kansas goes bad, I'll just get in the Biscayne and drive over there tomorrow, demand my money. I have that recourse.

People! As Paul says, Hawaii and Alaska are U.S. States.
They have senators in Washington. They vote for the president. As far as the U.S.P.S, FedEx, and UPS are concerned, those states are, like, right over there.

To Sprint and other fone companies, after 7 or 8 PM, just pick up your fone and those places are a free call. If you pay for wired service, it's 5 or 7 cents a minute.

Here are some actual numbers from www.fedex.com

2 day service - 20 pounds

Virginia to Kansas - $61.85
Virginia to California -$65.83
Virginia to Hawai'i - $66.87

2 day service - 60 pounds

Virginia to Kansas - $151.93
Virginia to California -$166.63
Virginia to Hawai'i - $169.24

About the same price for 2nd day service.

FedEx Ground service - 20 pounds

Virginia to Kansas - $12.70 - 4 days
Virginia to California -$16.03 - 4 days
Virginia to Hawai'i - $48.22 - 7 days

FedEx Ground service - 60 pounds

Virginia to Kansas - $28.40 - 4 days
Virginia to California -$39.08 - 4 days
Virginia to Hawai'i - $114.63 - 7 days

Three days longer and more dollars going ground to Hawai'i. But then Buyer Pays Shipping!

The same tracking and return receipt, the same laws govern the business deal. It takes about the same amount of time.

The reason that they say "lower 48" is that they think it's still 1936. It just comes out. There's no reason other than old

thoughts cycling in old heads like regeneration in a triode.

It's like hollarin' out,

Kids these days!

You call that music!

Dag-nabbit!

I've bought items from Canada and sold to Canada. One thing I don't like about it is that it's expensive to ship across the border. In fact, it's cheaper to ship though Canada to Alaska.

But then, buyer pays.

I just had the experience of buying from China, a DEGEN DE1103. If you don't have one, go over to the Bay and look up the seller LIYPN. $44 for the radio and $24 shipping and insurance. Took about 8 days to get here.

This is the best pocket shortware radio. Check out the reviews on the web. 1 kHz readout, better than 1 uV sensitivity, stable, 4 and 6 kHz filters. Covers 100 kHz to 30 mHz continuous so you can listen to AM broadcast, 160 meters, everything!

I can sit in my car, pull out the whip antenna and copy 7040 CW in the evening. I heard W1AW CW the other day, this is in Virginia.

SSB sounds good. Well, mostly good. I still can't understand the hollarin' on 27,000.

While you're buying and enjoying the DEGEN, think about global commerce and the fact that you just traded with a real foreign country.

Unless something goes wrong. The abuse of international
transactions is legendary. Even eBay, PayPal, et.al. seem
to acknowledge it. As another poster observed, if you are
a large-volume commercial vendor, you can "eat" the
occasional transaction gone wrong. But if you are selling
one-off things (boat-anchors or not) on eBay, etc. it has a
significant chilling effect, no matter what generation you
represent.

I have two Eimac 3-500Z tubes for sale.They belonged to a friend who replaced them with two RF Parts 3-500Z. They are guaranteed to have 80 to 90 percent output. They do have some time on them, but are still good. They are missing the heat sinks on the tops. If you have a pair of bad tubes, you can remove the heat sinks on them to use on these tubes. They will be shipped in the foam cushioned boxes used for the RF Parts tubes. Price is $100 for the pair. Or $60 each plus shipping. Thanks, Charlie Hugg, K5MBX

I ship to anyone that wants to pay for it. I do avoid APO/FPO shipping, and not because of scams but because of very very poor delivery chances on anything not a 1 ounce letter.

I sent several boxes of supplies to friends serving in Iraq with the US Marine Corps...most of the boxes languished in a warehouse in Germany for about 4 weeks before being hauled to Iraq...then it was another 2 or 3 weeks befire they actually got the stuff. Needless to say, never ship a puppy or kitten to a war zone. I have one realative that was in Iraq for a year (the last time). I mailed him a Christmas package at the end of October. He got home in February and still hadn't received it.

I ship DX but the buyer has to pay for the shipping.

Yes, shipping to OIF/OEF is very very slow. This is because nobody wants to
go in there. Regular fuel shipments can take 2 weeks to cross the country.
Shipping to APO/AE (Europe), APO/AA (Americas) and APO/AP (Pacific region)
is fairly steady, at least going by Priority. Parcel Post or Media Mail go
by SAM (Space Available Mail) and can take months to get ANYWHERE within the
military postal system. This is because EVERY other class of mail gets
priority over SAM, and some of those parcels don't leave the mil hub for
weeks (stateside).

Source record: 7997

Hi
I have a Collins 75S-3C Round Emblem, and it has worn paint on the
left side of the Gain plate. Its right next to the bandswitch. Not
the grain on front panel, the worn paint is on the plate. Looks like
the person before me, turning the knob back and fourth had his thumb
always rubbing against the plate and that worned it out. The letters
on the top plate are fine and the right side is fine.
So, does this plate come off and I can get another?
Which would make it alot easier.
Or I have matching paint and I can respray the gray on that side. Not
sure how it will match? And the 5 white indicator
lines, how would I get those back on. They are not fully gone. The
beginning closest lines to the knobs are there,
but when they extend to where the outer end where his thumb rubbed are
gone.
Sorry for the long discription, Rich

Source record: 7850

Hi,
Many Thanks for reading this request,
Can anyone provide me with a copy of the instructions for a Microwave Modules MML-50-100 50MHz (6m) linear amplifier.
I have just bought one 2nd hand which didn't come with the usual (if anything like the 2m linear amplifiers I've owned) single page instruction sheet.
Principally I would like to be sure of the power supply requirements, fuse ratings etc.
So if anyone can oblige I would be very grateful.
Many Thanks
Robert GM0CSN

1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

2: The passing score for written exams needs to be raised to 85%.

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

4: Make the no-code license one year non-renewable.

3824. you mean let kill the ARS

might be a good idea but only if we go one class of license o make
deffernt test to renew
>
>
> 2: The passing score for written exams needs to be raised to 85%.
mayebe ok
>
>
> 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.
killing the service off
>
>
> 4: Make the no-code license one year non-renewable.
and cuting numbers by 50percent insuring the end of the ars within 10
years

5. No more "multiple guess" code test. One minute solid copy with
lots of numbers, punctuation, and intentional misspellings

6. No more VE sessions. Re-establish testing at FCC Field offices,
and train test administrators in the mold of Jules Finkelman.

7. No more pass the theory one day, the code another day. If you
expect to be a ham, you should know both the same day.

8. No more transceivers. Separate receivers and transmitters,
preferably with tubes, that you have to tune separately. For first
year of license, crystal transmit frequency control only.

9. Fill in the World Trade Center hole, re-establish the old grid of
streets, and re-establish radio row on Courtlandt Street.

The council of VECs has already eliminated the multiple choice test. Now
it's fill in the blank or get solid copy.

Why? Is Amateur Radio a memory test? Make it a lifetime license and
reduce the FCC's workload.

> 2: The passing score for written exams needs to be raised to 85%.

Why not 100%? Are you saying it's ok to screw up 15% of your operating?

> 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Why should anyone be tested for code proficiency if they don't plan to
use it? I can see testing for basic knowledge (dit dah = A), but why
any particular speed? Should people be tested for speed talking before
using voice modes?

> 4: Make the no-code license one year non-renewable.

All licenses should be no-code. Does the FCC test for speaking ability?

I don't think you have thought this through very well. Go take a nap
and come back after some extended cogitating.

Bill, W6WRT

They don't make a counter that goes high enough to number all the
Freaks on CB.

You would have a scanner if it weren't for hams. Ever tune 144-148 or
420-450? Good stuff Maynard.

3850. Need advice on 6 meter mobile antenna

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-24 12:35:07 UTC
From: k5dh@raytheon.com
Message-ID: <%1hHg.1$qJ5.0@dfw-service2.ext.ray.com>
Source record: 7886

Hi all,

I find myself in need of a 6 meter mobile antenna. I intend to use it for SSB at the low end of the band. I have no interest in 6m FM or repeaters. It must be a whip antenna rather than a loop for aesthetic reasons (XYL would kill me if I installed a Squalo on the truck!). I don't care about cost. I'm flexible on what type of mount is required. I presently have a 3/8"-24 mount installed, but it's easy to change to NMO, UHF, etc. My previous 6m antenna was a helically-wound piece of junk from Iron Horse, which literally fell apart. I want something that is built well and will last. My mounting location will be the right rear corner of the aluminum toolbox on my F-150 pickup.

I'm interested in hearing about YOUR personal experiences with 6 meter mobile antennas: what worked well for you, and what did not. I am not interested in "My buddy says..." or "I think I read somewhere...", 'cuz that's worthless hearsay. I wanna know what worked for YOU.

Thanks and 73,
Dean K5DH

The only thing I have ever used for 6-meter mobile is a full-size
(54") whip. I have tried loaded antennas, but you just can't beat a
full-size whip. For many years, 6-meters was my only mobile band. We
also had weekly transmitter hunts on 6-meters. With that said, most
SSB work is going to be horizontally polarized, so you would be better
off with a Squalo.

I am using an Antenna Specialist "disguise" type cowl mount whip that I cut for 6 meter FM. These antennas were quite popular in the 70's when police agencies used the VHF low band frequencies. I use a Standard tri-band (6m, 2m, 70cm) in the car which runs 45w,50w,30w out respectively. I have a single coax connection on the back of the radio which goes to a diplexer that sends the 6m transmit to the cowl mount antenna and the 2meter and 70cm, signal to a dual band antenna on the roof. The dual band antenna is a low profile cellular look-a-like antenna, so at first glance it appears I have an AM/FM antenna and a cell phone antenna mounted on the car. The 6 mtr antenna works fine and the performance is what you would expect from a 1/4 wave whip.

I know you didn't want any second hand stories but I have friends who have successfully used Larsen 2 meter 3db base loaded antennas on 6 meters. Interstingly enough they turn out to be resonant on 6 meters as well as 2 meters. If you are looking for an NMO antenna, that would be the way I would go. You could essentially be getting a "dual band" antenna for the price of a 2 meter base loaded antenna.

Go down to Rat Shack and get you an 8 ft stainless whip, pop the ferrel of
the end, cut it to the correct length, then silver braze the ferrel back on
it. It worked for me.... now that whip is on top of my Tarheel screwdriver
antenna :-)

Ok.... and lose 99% of the available operators when another Katrina
hits..... We needed *ANYBODY* that had a radio and a license for almost a
month after the storm. My town took the direct hit from Katrina..... even
though we are 60 miles north of the gulf, I still had 110mph sustained winds
at my house.

=======================================
Suggest you go to www.mods.dk select manuals select Yaesu You'll
find manual and circuit diagramme somewhere down the bottom of the list.

Unless you support the site financially you can download ONLY 1 document
each day .

Good Luck

Frank GM0CSZ / KN6WH

My Larsen 2M 5/8 wave whip has a good SWR in the 6M band. I haven't used it
to operate 6M mobile because I don't have a rig for that in the car.
73,

Nice older 2-meter multimode. CW, USB, LSB, AM and FM transceiver.
Min. 10W output. I've used this rig with external amps to run meteor
and tropo scatter and EME.

Been keeping it to get back on EME but health issues are preventing
the construction of new antenna.

Asking $150 plus actual shipping costs.

email:n7ws@yahoo.com

Thanks and 73,

Wes

Total active individual licenses as of May 14, 2000:
Novice - 49,329
Tech/+ - 334,254
General - 112,677
Advanced - 99,782
Extra - 78,750

Total all classes - 674,792

Total active individual licenses as of June 30, 2006:
Novice - 24,877 (-49.57%) (-24,456)
Tech/+ - 320,242 (-4.20%) (-14,012)
General - 132,758 (+17.82%) (+20,081)
Advanced - 71,753 (-28.13%) (-28,029)
Extra - 108,184 (+37.38%) (+29,434)

Total All Classes: 657,814 (-1,405 since the March 2006 reporting
period)

Total all classes (5/14/00) - 674,792
Total all Classes (4/21/03) - 687,860
Total all classes (9/6/04) - 674,788
Total all classes (6/30/06) - 657,814

Total loss of 16,978 since 5/14/2000 (Was 674,792)
Total loss of 16,974 since 9/6/2004 (Was 674,788)
Total Loss of 30,066 since 4/2003 (all time high of 687,860)

We lost:
842 Novice
1,088 General
1,157 Advanced
3,087 Total

We Gained:
1,258 Tech/+

424 Extra
1,682 Total

This is an overall 1,405 decline since the March reporting period
and averages 467 per month for the quarter.

For the months March April and May the new licenses issued
break down as follows.

6,999 Tech/+ 89.3% **
627 General 8.0%
217 Extra 2.7%

Total new licenses issues during the period - 7,849

** These numbers come from the very interesting and comprehensive
website of Joe Speroni, AH0A http://www.ah0a.org

Numbers of US population and the number of hams at the start of each
decade from 1930.

Year Population # Hams Growth Rate
1930 123,202,624 19,000
1940 132,164,569 56,000 194%
1950 151,325,798 87,000 55%
1960 179,323,175 230,000 164%
1970 203,211,926 263,918 15%
1980 226,545,805 393,353 49%
1990 248,709,873 502,677 28%
2000 281,421,906 682,240 36%
2006 657,814 -3.6 %

The 2006 number was as of June 30, 2006.

I just read the latest QST. In "How's DX?" the author notes that ham
radio "used to be" the prime communication from and to Haiti. But now,
with cell phones, satellite, etc. it is no longer as important.

This is the real world. Morse is NOT the issue.

Relevance (is that the correct spelling?) is the issue.

Ham radio really WANTS to help in emergencies. This is very
commendable. I think, though, we've been sidelined.

We're still there "when all else fails". Morale of those involved remains high, from what I hear / read.

However, in a typical emergency, ham radio is not nearly as primary as it used to be. It's OK. We can still contribute.

Communications have been "universalized"...anyone can use a cell phone. It's natural that communications-specialists see their need waning.

It's OK.

As a hobby, ham radio has a LOT to offer. When I mention to others that I have re-entered ham radio, many people ask "Is that still around?"

Man, of COURSE, it's still around.

If you discuss ham radio with others, do you mention contacting the Space Shuttle? ham radio satellites? weak signal work in VHF/UHF? Sporadic E? Tropospheric Ducting? DX???

How about EME?

You don't have to be doing these things yourself, you just need to let everyone know what the ENTIRE hobby is about.

Morse, data, SSB, FM all have a place.

Ham radio is NOT dying. Hams are. Share our hobby, in ALL its forms, generously with those you know. The rest will take care of itself, for better or worse.

Change 5/14/00 to 4/2/03 - ***13068
Change 4/2/03 to 9/6/04 - -13072
Change 9/6/04 to 6/30/06 - -16974

What a perfect example if ignoring evidence that doesn't back up your
argument. There was no change in Morse from 5/14/00 to 4/2/03, yet we
GAINED over 13,000 hams, so how is a Morse requirement decreasing the
number of hams?

3875. ANTENNA TUBING ANTI-SIEZE

Hi,

I just got a used Butternut HF6V in great shape for a great price. What type of anti-sieze do I need to put between the sections of aluminum tubing ??? Is automotive anti-sieze OK ??? I don't think that it is electrically conductive. Do I need something like electricians use when they connect the aluminum service entrance cable to the breaker box ??? I think that stuff is called Penetrox. Is something like that available at Home Depot ???

Source record: 7918

You probably wouldn't get that far anyway. In order to remain within
the law, most GMRS/FRS radios can't use external antennas in
order to make the 500 mW erp rule. So, if you reduced power to FRS levels
and use the built in, not removable antenna on the FRS channels. it is short
(really short) range.
Option 2 is to go and get your GMRS license. Then get a handheld
that puts out the FULL 5 watts AND has a removeable antenna. Read over the
rules as to power output (EIRP) allowed. Set up an external antenna with a
max height of I think 20 feet above an existing structure(again check rules
on this figure) Take into account antenna gain, cable loss and ACTUAL
transmitter output to figure ERP. This is considered to be a Small Base
Station according to the rules AND is fully legal to interopreate with FRS
radios. The higher external antenna is almost guaranteed to quintuple your
coverage area from base to FRS handheld.
2 base stations with directional antennas(again watching erp) would be
really reliable.

> number of hams?

Hi Al -

Although it may be true I'm not arguing that the current Morse
requirement decreases the number of hams. However, two elements of the
OP's proposal were:

3: Code elements should be 13 wpm for General, and 20 wpm for Extra.
4: Make the no-code license one year non-renewable

My point was that increasing the code requirements beyond those in place
as of 2003 would likely reduce the already declining rate of enrollment
of new hams.

Couple other names Ideal Noalox (about $5 at home
depot) and , found at a swap meet - Jet-Lube SS-30
copper high temp (cost unknown, got MOST of container
for $ 2.00!) Also, several antenna companies sell
their own versions, relatively CHEAP! Jim

OK.... taking a poll....

By replying only in CW, either text dit-dah, or periods and hyphens......

How many people actually read that, and what is your analysis of the report?

I am running a script to see how long it takes you to click reply, enter
your response,
then click send. Your effective scaled-score code speed will be calculated
from those particular
clicks, along with the character count of the message. You will be made fun
of, according to your
CW speed. Anyone less than 24wpm will be required to take the new FCC
remedial code speed
Enzyte Exam for phallic phlops.

Gentlemen, gud luck.
rb

Huh? You mean there is something besides CW?? Man, don't you know CW saves lives?!?!?

Listen, Weak signals are for CW work on HF while boats are burning.
Contacting the space shuttle is just pointless unless you're correcting their keplerian elements for the return flight path or asking if they really drink Tang, Sporadic E [aka EMF bombing] is really pissing off the Condensation Entities that periodically enter the atmosphere to scan for intelligent life, and tropospheric ducting is a lie. I happen to have the control codes to several am-sats and I randomly change the freqs all the time, and you suckers fall for it without fail....
And DX? Hello....? Internet....?
:-)

3915. Anyone parting out a TS-520?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-08-28 15:24:32 UTC
From: Steve <zarco@sonic.net>
Message-ID: <44f30ab3$0$96147$742ec2ed@news.sonic.net>
Source record: 7751

Just bought a cosmetically nice TS-520. Unfortunatly it had
been converted to 11 meters, and the original 10 meter crystals
are gone. If anyone is parting out a TS-520 (any version), or
TS-820, I'd be interested in buying these crystals or the whole
board. TIA

Steve

++++++++++
Fire Chief was the regular grade sold by Texaco. Their premium was
Sky Chief.

In the 1950s, Sunoco sold only one grade of gasoline, which was
supposed to be a "near premium". Its gimmick was that it was dyed
blue, whereas other gasolines were yellow to red. In the 1960s, its
super-premium was Sunoco 260 from the "custom blend" pump.

++++++++++
I know a Tech who refuses to attempt to upgrade until code is dropped.
Yet he claims to have "very conservative values". He also believes
that hamfests should carry more non-amateur radio related things, like
old movie VCR tapes and Glenn Miller recordings.

He refuses to attend any amateur radio club meeting or gathering. He
wanted to have a non-amateur radio related picnic gathering of radio
amateurs on the Saturday of Field Day.

Nobody around here considers him to be a ham. We consider him to be a
"CB-Plus".

becuase the ISP will not retrain the trollss anymore which means the
troll crosspost everything every where

this set is relitively mild and at least is confined to radio NGs

Hey,

This thread is about CW and ham radio. You no-codes stay out of it.
Go find some CB'ers on 11 meters to listen to.

Do you listen to amateur radio repeaters on your scanner? Yes?

Well talk to Mark. He can tell you how to become a no code Tech. He is an expert at that because he's been a no code tech forever.

73, Happy to Help

Sweet Jesus!! Man, are you crazy??? Do you know how many hammies are gonna
see that and
what kind of search and rescue operation you've started....
Now lives will be lost and thousands of dollars wasted because of that
little trick.
I hope you're proud of yourself.

Actually, in all seriousness... my advice is to never put a d-cell maglight
in your front pocket on a 3am call.....
No good can come from it.
rb

Piggy-backing off this thread, please: When I was an EMI technician some years ago, we used conductive anti-seize on (most) hardware that was in a conductive path, such as grounding straps. I was surprised to discover that some/most anti-seize is non-conductive; you can daub some kinds on the benchtop and stick ohmmeter probes in it -- nothing happens. I figured with its metal content, surely it would all be conductive, but not so.

I have no idea what implications this has for the OP's Butternut and would welcome comments.

Yes, but he has a point - the original person posted this same request
on a VK board on the 24th, was pointed towards mods.dk, but still
keeps on asking the same question!

I think he wants someone to do it for him........and burn a CD, and
mail it to him.....

Andrew VK3BFA.

I got a tube of GB Ox-Gard OX-100 to coat the sections of my Butternut HF9V vertical as I assemble it. I looked on both the tube, the packaging, and the GB website, but none of them indicate whether the product is silicone grease based or petroleum grease based. Does anyone out there know ???

Soak a bit up with a piece of paper or cardboard and light it with a match, and you'll have the answer in seconds. Petroleum based grease will burn like crazy but silicone based grease won't.

But why do you need to know?

Go here and look for the Heathkit you want.

http://bama.edebris.com/manuals/heath/

Seems to be about a 14 meg download for the hw100. The SB series is almost
the same rig except for the VFO .
YOu might look at the sb-102 as I think it has a few improvments such as a
hotter tube for the first RF amp in the receiver.

Manual is available at http://www.mods.dk

more specifically, at http://www.mods.dk/index.php?ListManuals=kenwood

As far as getting crystals, any of the old reliable crystal manufacturers have the data to provide crystals for the frequencies you specify. I used ICM (International Crystal Mfg) since the 60s, but gravitated towards Sentry Crystal Mfg. Co in years later.... I think I preferred the accents of their Southern Bells <G>. In either case, they provide quality crystals, and there are many other sources too.

thanks for the info. I'd already downloaded the mentioned file. It
was not what I wanted. That file is a 2200G and mine is the 2200A.
There are enough differences to make a difference. I don't have a
tone knob on the radio but in the mods it says you can put a resistor
pair in and achieve it.

thanks

Correction, Mark, Blow Code likes lots of BS. :-)

He also wants lots of attention and might want to be the
successor to that military impostor Robeson.

>> BTW, I didn't know we lost ham radio and need to take it back.
>
>his idealogy lostcotrol of Ham Radio completely about 20 years ago with
>the introduction of the No Code license

Actually 16 years ago (1990) but the movement to end the
morse code testing for AMATEURS had begun much earlier than
that.

Prior to the opening of the Internet to the public in 1991
the ARRL could retain attornies in DC to promote Hiram
Percy's ideals of morsemanship. [paid for by ARRL
members] However, no-code-test advocates did manage to
get their Petition into the NPRM stage in 1990. That
passed into LAW in 1991 and the rabid morsemen have
been frothing at the mouth over it ever since.

Interestingly enough, the ARRL had to retain a lobbyist
organization after the Internet went public...in addition
to the law firm on retainer. [also paid for by ARRL
members] The competition for the FCC's ear had grown
now that amateurs could "talk" to the FCC directly instead
of being filtered through the ARRL. Rightly so since the
ARRL membership has never been more than a quarter of all
licensed US radio amateurs. Democratic principles in
action for this republic, not the monopolistic pseudo-
"representation" of a minority group organization.

>he is going to whine for another 50 year or till he drops dead

Has Blow Code ever identified himself by callsign?

Blow Code is more likely just one of the 'others' under
a new pseudonym. Either that or the pro-code-testers are
just all parroting the ARRL dicta (or is that "papal

encyclical'?) from the Church of St. Hiram in Newington.

>> Blow Code, think before you type will you? You spend entirely too much
>> time on the computers. Get on the radio and talk to all the old timers
>> on CW will you? They are lonely and need you there.
>
>thinking? I realy don't thik he can do that he seems to be one of those
>fellows for whom Narrow Band OOKed RF causes brain problems

My take on that is the monotonic beeping did it. :-)

Rabid morsemen reject all communications outside of their
very tight little RF spectra and sing praises of their
very narrowband mental viewpoints. Maybe that's what
they think is "intellectualism." :-)

Or, it may be some undiscovered malady in their brain
which also keeps them from advancing beyond their mental
youth. They can't think "outside their box" but then few
morsemen can think inside the box containing their radio
circuitry. It seems that anything other than their
twitching fingers carressing their code keys is some
mysterious, alien "force" in those radio boxes, a deep
mystery to them. The signs pointing to that are their
inability to talk technical other than parroting (again)
the ARRL information spoon-fed them. That lack of self-
confidence or insecurity may lead to their defensive
"we are better than you!" shouting about their beloved
psycho-motor skill of morsemanship.

Gotta love their LACK of technical details, all the time
praising to the skies of their narrowband signals yet an
almost utter lack of understanding Shannon's Law, the
universal relationship of message rate, random noise,
information error, and bandwidth. Maybe they can't
THINK faster than 20 to 40 words per minute? :-)

US amateur radio appears to be quite alive and well today.
That despite the ARRL's insistence that all amateurs
should emulate the standards and practices of the 1930s.
Instead of trying to take a neutral, hands-off policy on
code testing, the ARRL ought to look at itself and the
reason they can't get membership from the three-quarters
of all amateur licensees in the USA. That majority IS
the future of US amateur radio, not the frozen-in-their-
youth delusions of some olde-tyme morsemen.

the problem with makig an ID is that so many of of tem were stamped out
of the same warped mold

I doubt it. Robesin has a peculiar format in his text and shouts
denigrations to others too much.

That mold isn't so much warped as just OLD. It was fine in 1930
but 1930 is 76 years ago.

it is warped if nothing else from doing that muchstamping even if it
fit all though years ago

indeed I supect it bent abit some 30 years when it tried to put it
stamp on ME
>

JDB, You're back.

Did you get tired of playing with your model Cho-Cho trains? You could
try stamp collecting for something else to do, but you might not be smart
enough to figure out what side of a stamp to lick.

Cross-posted to: alt.radio.amateur,rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.amateur.swap

I have for sale from an estate a Ten Tec Scout with the 40m and 15m modules. Also included are the following: cables, mic, manual, 607 keyer paddle, 937 power supply, mobile mount, and 1203 dummy load kit (I haven't found the instruction sheet for the dummy load kit). It appears that the radio and accessories have never been used. The cables, mic, and mobile mount appear to be in original packing. I believe that it has the noise blanker installed as the instruction and installation instructions for the noise blanker are included. I would like to sell the entire package, if possible. I'm asking $450 for all. If interested please contact me via email or telephone at 972-231-7511. I'm in the Dallas, TX area. If you are in the Dallas/FTW area or reasonably close I would be pleased to meet with you and let you inspect the items.
Thanks...Fred Z. (W5HTR)

I have two Motorola SyntorX9000 lowband mobiles.
30-50mhz 110 watt with dual control, complete.
These units can be converted to work on both 10mtrs and 6 mtrs with the
proper software. I can NOT program them. I'm looking to sell or trade these
units for any reasonable offer.

I'm looking for:
VHF Spectra 110watt A9 Head
VHF Spectra 50 watt dash mount.
VHF Spectra 50 watt remote mount.
Yaesu FT8900R quad band mobile
FT8800R dual band
Alinco DR605TQ
Or similar equipment. Equipment must be complete and in good working order.
Please email direct

I won't suggest stamp collecting for you Mark. You would probably whine
that the little boxes where you paste the stamps are too small and you
won't go any further until the post office makes bigger boxes, and that
the problem is the big stamp collectors want stamp collecting to be like
a frat house and squeeze out the little guy.

4005. FS HP3586B Frequency selective level meter VLF receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-05 00:38:34 UTC
From: **THE-RFI-EMI-GUY** <rhyolite@nettally.com>
Message-ID: <eG3Lg.22571$bZ6.12784@tornado.tampabay.rr.com>
Source record: 7841

For Sale: HP3586B Frequency selective level meter VLF receiver

This unit has the high stability oscillator and is excellent condition. No dents, no scratches, and no dust inside whatsoever. I believe it was rack mounted at an environmentally controlled site and seldom used. I don't have the feet and the small blank panels (where the rack ears normally go) but these are common size. This unit works fantastic and has a new NICAD memory battery installed. I replaced one of the jacks in front with a BNC (easily reversed mod that screwed in). I also put a nice black anodized aluminum spinner knob on the VFO shaft encoder for ease of tuning. It makes for a very sensitive VLF receiver and can measure extremely low levels with great accuracy. By the way, there is an RF output jack on rear which enables you to sweep filters etc.

The service manual is included.

$495 plus shipping from central florida

Description :

HP 3586B Selective Level Meter 3586B: Meets North American Bell requirements, 50Hz to 32.5MHz frequency range with 75ohm unbalanced signal input, 4kHz to 1MHz frequency range with 124ohm balanced signal input, 4kHz to 1MHz frequency range with 135ohm balanced Input

Source record: 7699

I have some motorola gp88s that I use for two way in a motorsports application. I recently got two vx500 vertex radios that I want to use as a backup system. However I need to change the connector end on the car wiring harness in order to make this work. The accessory jack of the two radios is different.

Questions:

1. Where can I buy these connector ends? Are they called a specific name? I've found different names like x00 or s1 connector or x03. And I'm having a hard time finding a place that sell just the end.

2. Is there an adapter made to make this work? From motorola accessory jack to the vertex?

Thanks for any help

JAson

FS Alpha 87A Amplifier NICE!!!!
Non Smoker and looks GREAT!!!
I use it every evening. And of course it will do Legal Limit and
more.
I don't abuse it, so tubes are 100 Percent!!!
ETO Alpha 87A
I can't say enough about this amp, alot of built in protection etc.
Will be packed very well.
Price: 4200.00
ritchi50@optonline.net

Don't be fooled by the watchman, in reality he is Norman P Triantafilos
KB9YGD
2634 Warren Street Lake Station IN 46405 he has many Aliases so he can
hide,

I know old Norm the Nose personally, where do you think he got that
name "Norm the Nose" draw your own conclusions. Scarlet Charlotte was a
transvestite that Norm the Nose befriended, makes one wonder what
frindge benifits ole Norm the Nose received from Scarlet Charolette,
you know that old saying about the Greeks, and Norm the Nose has a
Greek heritage, ah ha ha.

Ole Norm the Nose was a CBer with the handle "sugarman", or "Mr. Norm",
he always talked out of band, (27805mhz on his illegal modified cobra
2000 GTL) to his girl friend Peggy Lou, imo she was a prostitute he was
pimping,(yes he drove a Cadillac)Norm the Nose was an alcoholic who
stayed drunk most of the time, he lost his license to a DUI in Lake
Station,In.

Mr. Norm had a wife once upon a time that was , imo she was
undesireable, couldn't keep her hands off of ole Norm the Nose friends
when they would go on an alcoholic pill popping binge, she had a
daughter that old Norm the Nose had a little trouble with, draw your
own conclusions too.(it's on record).

Now ole Norm the nose is a memorized no code Ham with a general license
fouling up the airways, you should have stayed with cb it was more
fitting, Norm the Nose would get drunk and use the lowest of langauge,
cb ops would taunt him all night, he would cuss and spit in the mic,
the stuff Norm the Nose said would make a sailor blush, he would talk
about boogering CBer's in the rectum, the worst of sexual acts toward
the good citizen band ops, some were female ops that couldn't defend
themselves, but he didn't care it was the alcohol and pills that drove
him.

That's it for now but more to come!!! next I'll expose his arest record, ah ha ha (when you have skeletons in the closet what goes around comes around)

it's Hammertime, ah ha ha.... (it's not slander when it's the truth)

4021. FS Excellent Icom IC-781

Newsgroup: rec.radio.amateur.equipment

From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <VhNLg.5436$B14.2659@dukeread03>
Source record: 7707

I have decided to sell my Icom IC-781. It is in excellent condition and comes with the manual and the handles. Also, I have installed the Sherwood Fan Kit to keep the power supply cool. It has a very bright and clear display. It is all original and has never given me a single problem. It has low hours of use. Pictures are available upon request. Price is $2100. Thanks, Charlie Hugg, K5MBX

4022. Bio-TERROR in America: The Government of Torture!

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-07 17:10:57 UTC
From: nanodesigns_usa@yahoo.com
Message-ID: <1157649057.339024.241020@d34g2000cwd.googlegroups.com>
Source record: 7708

AMERICA IN DANGER of its own out-of-control Bio-Terror:
Is 1984 here? God help us, blinded!
Originally Secret Bio-Aerosols are misused to HARM and Torture in
U.S.A.

Our government needs TORTURE in U.S.? See details
below...
It has your VOTE, support? Abused...

CRITICS (political/social/cultural) are harassed and secretly
persecuted
along with their KIDS in schools/colleges, especially, during
tests/exams
(Think: Guantanamo "stress-positions" in the context of
1984-technologies)

Bio-Aerosols and aerosolized chemicals are used to cause:
- severe colds/coughs turning into bronchitis, eye irritation
- bacterial pneumonia/other pneumonia, shortness of breath
- surges of severe headaches, migraines, dizziness, etc.
- fainting collapses by symptoms-mimicking aerosols
- severe stomach pains (sharp, burning, nausea, etc)
- chest-wall pains, heart-muscle inflammations/trauma, etc.
WORSE:
- heart attacks under cover of second-hand smocking
- car crashes/accidents by Vertigo-causing aerosols
- liver/organ failure by small-dose toxins (trace-less?)
- cancer-causing/facilitating - months-long assasinations
This "Yushchenko syndrom" CAN destabilize NATIONs
Waste, Fraud, Cronism and Abuse in HomeSec/FBI

U.S. mail IS polluted in "anthrax-like" manner to HARM critics
Libraries, airplanes, hotels, offices, buses, trains - all polluted!

A network of Secret Gas-Aerosol Rooms operated in US
(in Philadelphia, Narberth, Lower Merion, PA)
(in Wilmington and Newark, DE)
(in Hampton, Williamsburg and Richmond, VA)
AND ELSEWHERE.... details below...
Bio-aerosols used to hurt and simulate panic attacks, etc.!
Soviets locked critics into nut-houses, now WE do the same!
Symptoms-mimicking aerosols do HARM, weak or ill people.

Say "Stop, I care" - call Senate (202) 224-3121
House of Representatives (202) 225-3121
What IS going on in America? *Print and Post*

Fabrication of Fear to grab Power by Fabrication of Believable Info

Big Brother spins protection...
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Looked at this?!! Go to Google/Yahoo newsGroups:

TORTURE IN USA: Secret Aerosol Rooms

US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA) and other places. Highly volatile aerosols with and without bacterial content cause dry cough, airways a...

Full text was at:
http://buyit.philly.com/findit/search/results.jsp?catId=krd_philenqda...

This was a new on-line ad placed in Philadelphia Inquirer and Philadelphia Daily News on www.philly.com (see full text below)
It was about the secret aerosols rooms in US. One could find it by searching "secret", say, in the ad section of philly.com.

Democracy can not function effectively without the informed public. As a former NASA Langley scientist working in the area of nanotechnology and nanoscale particles, I have been recently exposed to the establishment of secret gas-aerosol rooms inside of United States, at least in the Mid-Atlantic region (from Philadelphia to Virginia). First, the highly irritant aerosols have surfaced at the NASA Langley Research Center in several safety accidents. Investigations were blocked, probably, because of lack of Congressional approval for such financially-lucrative research at NASA. Later, these aerosols had been encountered outside of NASA in Virginia, Delaware and Pennsylvania
.
This points out to yet another proliferation of originally-sensitive technologies into domestic American life to hurt and harass people without a proper oversight and much control. This amounts to torture, extra-judicial prosecution and authoritarian intimidation tactics. The use of such irritants and the operations of the secret gas-aerosol rooms are gross violations of human and constitutional rights of American citizens and various domestic and international laws.

------------------Full text of an ad from Philadelphia's philly.com--------------------------
TORTURE IN USA: Secret Aerosol Rooms
US Scientist needs legal help dealing with the secret aerosols rooms (SARs) operated illegally in Philadelphia area, Newark (DE), Hampton and Williamsburg (VA). Highly volatile aerosols with and without bacterial content cause dry cough, airways and eyes irritation, chest pain and inflammation. FBI and Homeland Security associates are likely operators of SARs, while collaborators may be hotel staff and

landlords, who get financial/material or other incentives. US citizens
and kids are victims.

Torture is any act by which severe pain, whether physical or
psychological, is intentionally inflicted on a person as a means of
intimidation, deterrence, revenge, punishment, sadism, or information
gathering. At times, medicine and medical practitioners have been drawn
into the ranks of torturers, either to judge what victims can endure,
to apply treatments which will enhance torture, or as torturers in
their own right. http://en.wikipedia.org/wiki/Torture

America in Danger!

America in danger -
The vice is NOT impeached.
America in danger -
The public trust is breached.

Big Brother spins protection
And fear is used to clamp.
Democracy needs action!
On which side do you stand?

Which side are you on, boys?
Which side moves you on?
Which side are you on, girls?
Which side did you wrong?
(Chorus after F. Reece)

Your church is burned by haters.
The priests to go to jail?
Your dreams are cheyned by traitors,
But hope still shines through veil.

Dust rooms came back to gas us
With neo-Naz (or Con) embrace...
New immigrants do make US!
And not the SSuper-race...

***

The Government of Torture

Our government needs TORTURE?!
It has your VOTE, and, now, support?
But peace (not vice) needs steady nurture
And trustful words of calm rapport.

Beware of loud, but FALSE, ideas
That flame a thirsty hellish torch.
Protect the old and true ideals
And Constitution's civic urge.

Yes, torture IS a hellish torch -
In bloody hands, a blinded sword,
With Constitution used to forge
All laws on rights as mere absurd!

Remember victim's silent cry
And SEE the Christ in all of us.
Don't let your government to spy
And torture with some bio-dust.

There is NO good use for evil torture!
No matter how the need is spinned
By Nixon's men, as bloody sergeants,
While truth is painfully re-skinned.

V. Haryk-Bukovynsky © VMH

4025. Basic info needed (longish)

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-08 01:54:29 UTC
From: Twiddler <twiddledee@jotjet.net>
Message-ID: <1157680469.334756.51780@e3g2000cwe.googlegroups.com>
Source record: 7711

My brother-in-law was a radio hobbyist and passed away a few months ago. I am helping my sister sell his equipment but I am not very knowledgable and I want to understand more so I can get what it is worth for her. He had no life insurance and she has two children to support. I am worried that I will not describe the equipment fully and not sell it for its true value.

He had several Icom IC-W2A hand-held radios. From what I've read these are fairly old but I think they may be desirable because you can enable them (via the keypad) to scan a wider range of frequences (800 ~ 900+). I think that newer radios have this capability disabled? He also had an AOR AR 1500 that I think has similar unrestricted RX frequencies. Is it legal for me to advertise these exteneded ranges on Ebay listings? There seems to be some secrecy to this kind of thing as I try to research it.

The IC-W2A radios can also be set up as as dual band repeaters. I don't really understand why you would want to do this unless you are providing a repeater service to other people? This seems odd for a hand-held radio.

I have also seen mods for these radios that enable MARS/CAP. He was a very accomplished electronics technician so I would expect he has modified these radios. Besides taking them apart, can I check to see if they have been modified some other way -- maybe tuning to a particual frequency and listening? Again, is it legal to advertise this feature if they have been modified? There doesn't seem to me that there would be much activity on Military Amatuer and Civil Air Patrol but there seems to be a lot of references to MARS/CAP modifications around. He had an Icom IC-207H with a label of "MARS/CAP" on it. It was on his bench and connected to one of five large roof-mounted antennas. I think this was probably one of the radios he used the most. Are there other mods I should look for on it?

He had several GMRS hand helds (Radio Shack and Maxon 210+3) and CB radios (Radio Shack and Uniden). Is there any unique enhancements I should invesigate on these? The Maxon 210+3 radios (he had several of these) also are older models but they push 5 watts. Is that unique to the older radios? Since he had several of this one model I think there must be something unique about them.

He also had a Magnavox D2999 PLL World Receiver. He had modified it for an external (roof mount) antenna. I was thinking about re-connecting the built-in antenna on it before selling. Anything else I should look for on it?

I would appreciate any help or advice you folks can provide. If you have any questions or any tests you can walk me through on these radios I will be glad to give them a shot.

Thanks,
Twiddler

4026. Advice on Oscilloscopes Sought

Newsgroup: rec.radio.amateur.equipment

Being relatively new to ham radio, I am considering some form of
oscilloscope. I am intrigued by PC-based systems (eg., BitScope Pocket
Analyzer)

I've read a few NG posts about used HP scopes and a few negative remarks
about PC scopes.

My question:

Given my neophyte status and the likelihood that I would use a scope for
anything more the basic / with learning, moderate/ complexity,
... is the PC-based scope a good choice for me?
Cost is under $400, not incl. a $40 analog probe.

Geez I bought an almost new 50 MHz Tektronics 2225 for $35 and that was with probes. You can get a decent bench scope for not much money.

You don't say what you want to measure with a scope, and it is very important with a digital storage scope.

Nyquist's theorem says that if you are sampling at 2x the highest frequency present, you can determine that frequency. My experience with digital storage scopes is that you want at least 5x the sample rate and 10x is better to look at a waveform. As a result, a 20 MSample/sec scope is useful up to 2 - 4MHz of input bandwidth. Beware, some of the digital storage scopes specify a "repetitive sweep" bandwidth that is equal to the Nyquist rate. If you are looking at a repetitive signal, you actually can approach this rate. If you are looking at a one-time or rare event, the usable bandwidth is much lower. Exceeding the bandwidth of an analog scope gives you a distorted view of the amplitude and possibly the waveshape. Exceeding the Nyquist rate on a digital scope becomes outright deceptive in amplitude, waveshape and frequency.

Unless you need a DSO, I would suggest you look for a good used analog scope. Tektronix made some really nice analog scopes and the 465 is one of the best. HP's analog scopes were always a disappointment to me, but their digital scopes are first rate. As a solid scope, for learning and genearal utility, analog scopes offer a lot more bang for the buck.

Good Luck,
Bob

This evening the GF noticed that the remote control wasn't working & was hot.
I pulled out the extremely hot AA batteries.
It looks like the spring contact in the remote control, on the negative side had worn away the plastic covering on the side of the battery & shorted the side metal battery casing to the negative contact, thereby causing the overheating.
In my many years of battery dissection, I've never seen the side casing of a battery being positive before!
These were "Golden Power" alkaline batteries, made in China.
They were the original batteries that came with the remote (for a Shaw digital cable box).
Anyone ever seen a positive case AA battery before, or is this a new (dumb) idea?

oops..my mistake ..it looks like Maxell amd Ikea (made in Germany)
alkaline batteries are all the same..a positive side casing.
When the hell did they stop making the old negative zinc sides?
Only with Alkalines? What a PITA!
My apologies.

BTW: Ikea batteries come from Varta. Better price than original Varta
labeled and the technical performance is good. Duracell is better - even
useable as AccuCell.

I've seen many Alkaline batteries with the outside casing connected to
the 'tit' on top as the positive and the bottom flat connector was
insulated from the body of the battery. alkaline batteries have
different chemistry from carbon zinc resulting in an inverted
construction. This may actually be the norm, but in the larger sizes
the plastic outer wrap hides the details. Just looked at a DuraCell
"D" and it is of the inverted construction, but the insulation of the
battery bottom (-) terminal from the case of the battery is hidden
under the plastic wrapping.

4051. The James Rogers Story Part 1...

The Life & Times Of A Looser...

Ah ha ha... I think that you are talking about yourself...sounds like
you are the guy that did all that stuff and now you are feeling guilty!
Hameertime is a small minded bigot who is in search of himself yes he is so insecure.And
dont be fooled by his alias of hameertime he is in fact James W Rogers 270-825-3503

65 N Russell Dr
Madisonville, KY 424315854

He is so ignorant that he posted to the usenet with his wifes (maria rogers
mariablazer2002@yahoo.com) yahoo email account.All his life he has been abused by people
parents included it seems this is why he is the way he is today.. a person to be
pitied.K9KXQ is his amateur radio call sign and he give so many people in local government
a hard time that they run him and the rest of his unschooled bunch out of the city of
hobart indiana yes its true he was the laughingstock of the airways for miles around.No one
liked James Rogers when he was a cber in hobart indiana called JR because he would get so
drunk and was high on drugs he got from his old cb buddys and liked to throw carriers on
any one he could while they were talking.James has a retarded brother named frank and they
had a bunch of other lowlife scumbag freeloaders move in with them at 1040 rand street in
hobart indiana but like allways they just couldn not pay the house payment and lost
it...the rogers would move fr
om one house to another several months after moving in it was their style...ya know typical
ignorant southern trash.It will be only a mater of time when James Rogers gets run out of
madisonville KY to... His old friend Mike got a sexchange but broke Jims heart when he/she
moved to California so now he lost mike and scarlet to and was heartbroaken...But as things
were he had gotten fired from the e.j.&e. railroad in gary indiana and went to work for the
IHB rr where at lunchtime they would go to a tavern downtown and there he met his wife and
they both being lowlife scumbags and of course both hardcore drug users and drunks for many
years hit it off fine.Its funny how this guy and his family lives all they want is
something for nothing and to cheat someone out of something...Its their way of life like a
bunch of traveling hillbilly gypsies ah ha ha ha.. and how this guy did some of the hams up
in indiana is another story for chapter two of the JAMES ROGERS SAGA....Be sure t
o read Part #2 all you USENET users!

Since it's the cathode that gets eaten in whichever reaction is used for the
battery type, it might make sense to have the anode as the case.

I could have done with this 25 years ago when I got sent abroad for work for
three of months and came back to find that the transistor radio batteries had
leaked all over one of my (expensive) loudspeakers :-(

Hi,
I am looking for a schematic for an Icom IC-290A
I have the manual but it is short the P.C. Board Layout and the
Schematic.

I was wondering if anybody knows of a place online that I can download
the schematic or might be able to send me one via Email?

I would like to have the P.C. Board layout as well but it isn't a must.

Any Help would be greatly appreciated
Thank You

Poor old Norm the Nose,(KB9YGD) no one ever liked you, they all made
fun of you when you were in your drunken stupor, you remind me of the
drunken Southern Hillbilly that pulled your CB radio through your
window and made off with it, is there such a thing as a Greek
Hillbilly? if there is you fit the description

I don't know about Mike, haven't seen him/her in 10 years but you seem
to know quite a bit about he/she I've got a pix of you with him/her
dressed up as a woman at the PCARC meeting, you two are very close in
that pix, from what I understand you and he/she went to these meetings
together all the time, I never seen Mike/Michelle at those meetings
when I went, only after he became a she accompanied by Norm KB9YGD

I hope you have at least changed your habits of hygiene or do you still
stink like a rotten sewer especially from that hole in your face called
a mouth, take a bath and give the good people of PCARC a break from the
stinch of your bad body odor that oozes from your presence.

Got your coax cut did you, and the Lake Station Police were called out
to cite you for interference to your good neighbors entertainment
systems, my my, the good neighbors have had enough, they are walking
the streets on Vigo,Vermillion and Warren getting a petition signed to
get you out of the TV's, phones and stereo's, you are a bad man and no
real ham, only a "real pig".

have a good day, I am. ah ha ha ha

there's no time like Hammertime

> John
> AB8O
Download one of the programs that turns your sound card into a low
frequrncy scope. You can do audio stuff, spectrum analysis, etc.
You can learn a lot without spending any money.

If you have a specific application and know what you're doing,
a card that plugs into a PC can be useful. For most of us,
it's not a viable option. It's a real PITA to go find the mouse
and click a bunch of menus when you could have changed the gain
on your standalone scope with the turn of one switch.

Next, join your local ham radio club or get friendly with the folks
on a local repeater. Ask your question there. Most hams are helpful.
We also have more scopes than we'll ever use and can often be talked
into loaning them out. Try to borrow something like a TEK 453 or 465.
They're plentiful and won't give you a hernia carrying them out to your car.

If you work in electronics, go convince the service manager that it
would be a company benefit to loan you an old scope. About 15 years
ago, ISO9000 made it a requirement that every piece of equipment on the
production line have a current cal sticker. That got so expensive
that management had all the little-used stuff pulled and sold or put
in storage. I'll bet there's tons of scopes in storage that will never
be used again. Shine up that silver tongue and see what you can unleash.

Rule number one...don't get in a hurry to buy something.
Good deals come along. Visit some ham radio swapmeets, club meetings
etc. I've been able to snag 2GS/S 4 channel DSOs for free. Be patient.
A silver tongue and brown nose will take you far ;-)

Try to get probes with the scope. Typically, probes will cost you more than the scope did. Ditto for manuals.

I'd recommend a limit of $20 for your first scope. That $400 scope will still be there later when you're experienced enough to decide if you can use it.

If you get some experienced help evaluating the possibilities, a scope that's not fully working can be a great deal. Just be aware that some types of problems are more difficult/impossible to fix than others. Older scopes are fixable...newer ones, not so much...you just can't get the parts.
That's where the experienced help comes in.

ALWAYS assume a used scope is busted. I've never bought one that was fully functional...and the seller anways assured me it all worked...right!! If you buy it at a busted price, you won't be disappointed. I just bought a TEK 7K scope with plugins. "Sure it works.." Well, I beg to disagree. Looks like they took a busted mainframe and filled it with busted plugins. Busted price and I can fix it, no foul...
Get help.

I don't like EBAY for scopes. Surely there are many good deals to be had. I just haven't figgered out how to tell which ones. Beware of anything that says, "no way to test it." I once had an interchange with an ebay seller on that subject. He slipped up and replied from the corporate email of the largest refurbished equipment dealer in the world. When I challenged his inability to test it, he vanished. Hmmmm...wonder if it was repairable?

Unless you can get a real deal, stay away from a digital scope for your first one.
For most of us, a DSO is a VERY useful tool in a VERY limited number of situations. I find it mostly confusing. I use mine mostly for troubleshooting because it gives me a digital readout of the DC voltage. Most of us don't need a $20K low resolution digital voltmeter.
But a free low resolution digital voltmeter ain't so bad.
If I don't see the waveform I expect, I always dig out the analog scope. I've been confused more times than I like to admit. For most GP applications, you should get a DSO with WAY more bandwith than you think you'll need. That often puts it into the "can't afford" category.

A fellow ham suggested I visit www.qsonet.com. Here is a summary of what I found.

Are you tired of buying or building amateur radio equipment? Perhaps putting up an antenna isn't fun anymore. Maybe straining for DX is taking too much effort. Well don't despair - there is an alternative.

You need to consider becoming one of the "next generation" hams. Communicate around the world using your computer and special "radio" software. Traditional VoIP programs like eQSO, Echolink and Skype don't make you feel like a "real ham". You need to take the next step and use the Virtual Ionosphere and the CQ100 Transceiver. Call CQ, twiddle the knobs, send CW and RTTY, use ham lingo and make contacts around the world. However, you will need a ham ticket and $89 (after the trial period) in order to use this next generation "radio" simulator.

Geez - I hope this isn't a glimpse of the future. I think I'll just keep building stuff and be a "relic" ham.

> What is the ohmic value of the Heath SB 604 speaker?

Lee-

Apparently the SB-604 matches the SB-104 transceiver. I don't have any
more detailed info on it, but the SB-104 operation manual shows a "4 Ohm
Speaker SB-604" connected to the SPKR jack on the back of the transceiver.

In another place, the manual indicates that the SB-104 can be connected to
any speaker in the range of 3.2 to 16 Ohms.

Here's what I found:

doesn't work on Win98

Bad concept too. Probably work a lot better if the interface was a
cobra GLT148 and you had 40 channels. No seriously, IMHO it would work
great as a virtual CB set.

Why on earth do they ask for scans of licence documents when there is
absolutely no connection to RF?

Just my 2p.

Are there still any CBers left now that the sunspots are low and there
is little if any "skip" for them?? In order to appeal to CBers you
would have to add a linear amplifier option to the program.
>
> Why on earth do they ask for scans of licence documents when there is
> absolutely no connection to RF?

Because they want to restrict use to people with a ham license in an
effort to keep out the general riff-raff. Scanning the license and
waiting for approval makes it feel more exclusive and special. Once
they get CW working they can even start restricting band privileges and
have a nasty no-code debate on their forums!!

The "next generation" ham will think this software is great. No
problems with propagation for contest weekends. The server owner can
even add a little QSB and noise for those seeking a real challenge.
Why not add a QSL bureau (for an extra fee) and have awards etc.

Roger

Hi,
I am looking for a Manual(a schematic would be nice as well but isn't necessary) for a Instructokeyer Model- IK-440

It was built by Curtis Electro Devices,Inc.
In Mountain View California

Does anybody know of a place online that one can be downloaded from or maybe somebody could scan and email to me?

Any help with this would be greatly appreciated.
Thank you

No but there's millions of IRC and voice (skype etc) users who would be
on CB if the internet didn't provide the same thing. The CB metaphor
wouldn't be lost on them.

Positive can/case is standard alkaline cell construction. The correct
question would be "has anyone ever seen a negative cased alkaline cell?"

Hi:

Hypothetical situation: a PCM audio signal [24-bit and monoaural] is transmitted through an analog 3 Mhz AM carrier, an AM receiver on the other end [tuned to 3 Mhz] picks up the signal, and the reciever is attached to a device that can recieve, process, and decode the PCM audio back to analog and then send it to a loudspeaker. However -- in this theoretical situation -- the environment is filled with EMI, RFI, and heterodynes that affect all AM stations.

My question: Will the received PCM audio signal remain noticeably "clean" to the listener or will he/she notice the EMI, RFI, and heterodynes affecting the audio?

I ask because I think -- but definitely don't know -- that because the received signal is digital, it is less likely that the EMI, RFI, and heterodynes would cause noticeable auditory disruptions when compared to analog. Do I guess correct?

Thanks,

Radium

You guess correct, assuming that FEC is applied to the digital signal
before it is used to modulate the transmitter.

But you wouldn't do it that way anyway. Raw PCM is too bandwidth
inefficient. You'd use MPEG layer 2, or apt-X, or something like that
to reduce the bandwidth without noticeably degrading the audio quality.
You'd probably also multiplex several different channels (programmes)
together onto one RF carrier as well, to make better statistical use of
the RF bandwidth.

Cheers
Mike

Isn't 3 Mhz enough to transmit a data rate of 1.06 mbps?

44,100 X 24 = 1,058,400

Forward Error Correction. Google it :-)

> Isn't 3 Mhz enough to transmit a data rate of 1.06 mbps?

Yes - but the chipsets to compress the digitised audio are much cheaper
than the notional value of the bandwidth you would be trashing with
your 24bit PCM.

Cheers
Mike

Just to add to Mike's comment, FEC works by send the same message several
times- in simple terms, in the hope that one with get through correctly. It
is simple to implement, your recieving system just needs to be able to
identify a correct message and use it, not spot a bad message and initiate
either a request for resend or applly some sort of correction method
(assuming there is error correcting code in the message).

These comms are in one direction, so you don't resend a packet as there is no way to make such a request. In practice, the codes have both error detection and correction capabilities, so to the degree the coding allows, the signal can be corrected with the bits that were received. Note nobody mentioned a modulation scheme for sending this data.

As a bit of trivia, Reed Solomon encoding was invented without a way to decode it. That's what you get when you let mathematicians run wild. For absolutely nothing of any value other than bragging rights, name the guy who invented the decoding scheme for Reed Solomon. [Hopefully this isn't wikied someplace. I did one class in grad school on error detection and correction, and it was a pain in the ass if you get into the theory. Implementation is quite simple.]

With no FEC, your receiver would be more prone to those errors that you
were worried about in the first place.

>
> >

Just to amplify on this, anything that you can do to reduce the
bandwidth of the digital signal before it's used to modulate the
transmitter will help. One very big advantage is that you can wind down
the bandwidth of the receiver, thus reducing the level of background
noise in the system.

Why did you choose 3MHz? What's the application?

Cheers
Mike

FEC is generally used in applications where you don't have time to
request a retransmission of an errored packet, and/or where the
transmission path is simplex, and/or where there are multiplex
receivers for a single transmitter.

If you have the luxuries of time and a full-duplex point-to-point
environment, ARQ is better.

Cheers
Mike

> Why did you choose 3MHz?

44,100 X 24 = 1,058,400

1,058,400 bps requires that the frequency of the carrier be at least 2,646,000 Hz. To make it safe, use 3 MHz.

> What's the application?

Well, my application was more to do with reception than transmission.

I'd like to know what I would hear on a 3MHz AM carrier whose receiver [both the AM and the linear PCM part] is at its maximum bandwidth. The 3 Mhz AM receiver is attached to a linear-PCM receiver [once again, both receivers have the maximum bandwidth possible for them]. The linear-PCM receiver is attached to a DAC which converts the linear-PCM signal to analog. This analog signal [which was PCM] is then sent to a loudspeaker. Just to make things more interesting, the antennae and receivers are so sensitive that they can pick signals as low as .00000001 dB. Most likely, what would I hear?

It makes sense. The encoding software had to be ready to put into a probe
before the launch date. Once it was up it could not be changed.

Decoding software was another matter. Since they had years, maybe even decades
to decode the data, and it did not have to be real time, they could continue
to work on it.

All they had to do is not loose the tapes. :-(

Geoff.

> What would these errors sound like?

An error in a PCM system would manifest itself as a difference between what you put in at the analogue input to the transmitter, and what you got out of the analogue output of the receiver.

The magnitude and polarity of the difference would depend entirely on whether the bit error was the MSB (polarity would be wrong), or one of the LSBs (the amplitude would be wrong). It wouldn't "sound" like anything in particular.

Have a look here: http://www.imdb.com/title/tt0375210/ :-)

Seriously though, I have no idea. Why don't you try it and post the results here?

Cheers

I thought all of the carbon/zinc type batteries had negative cases. The little button on the top is the positive contact for the battery and the other end is essentially flat on most batteries today with some having a stamped bottom and sides in contact.

What about the heterodyne tones present on analog AM radio? Would they
be audible on a linear-PCM receiver that receives PCM signals on an AM
station?

Easy for you to ask. I doubt any store has the device. And the
equipment required to amplify .00000000001 dB to an audible level would
take up the entire room.

So the best I could do -- at least for the moment -- is guess.

I am aware though that just because the PCM-receiver is digital does
not mean its completely immune to heterodynes, EMI, or RFI. If the
heterodyne, EMI or RFI has a waveform that sufficiently resembles a PCM
signal, it may very well be picked up by the PCM-receiver that is

connected to the AM receiver.

Physically, the digital reciever is still an electronic device and hence it has some reception of EMI, RFI, and heterodynes. Its just not affected as much as an analog receiver would be.

In fringe areas, analog cell phones could be well understood despite the
poor signal-to-noise ratio. Digital cell phones in a fringe area just quit
working, or lose sync and you hear bits of other conversations.

According to Bob May <bobmay@nethere.com>:
> I thought all of the carbon/zinc type batteries had negative cases.

Most did -- but the zinc/carbon individual cells are relatively
rare now. An example of the zinc-carbon ones without a negative case
are the ones which were used to make high voltage batteries (even the 9V
ones) were a wax ring (shaped sort of like a tire) with a zinc plate at
one end and carbon at the other, with the sal-ammoniac (IIRC) in
between. All of the wax rings were joined end to end by melting the
wax, and this connected all the cells in series.

> The
> little button on the top is the positive contact for the battery and the
> other end is essentially flat on most batteries today with some having a
> stamped bottom and sides in contact.

The "little button on the top" was a metal cap over the end of
the central carbon rod which was the actual positive terminal.

However, the Alkaline cells use a different chemistry (I'm not
sure of the details -- but it could be looked up), and the positive
terminal makes the case -- which requires a strange form factor to deal
with all the equipment designed to orient the button properly as a
positive terminal. A standard flashlight would not care, but most
electronic stuff powered by batteries does care, which is why they
continue to shape things so the button is positive, even if it is
connected to the case. The common coin cells are different, because
there were never any of those with the button as positive.

Enjoy,
DoN.

4111. Icom Tuning?...Help Please

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-13 05:46:06 UTC
From: Clayton <Evans8119@aol.com>
Message-ID: <1158126365.996464.41560@e63g2000cwd.googlegroups.com>
Source record: 7697

Hi,
I have an Icom IC-290A that I am working on...The problem being that when I turn the tuning knob it doesn't change frequencies,it acts as if the knob is slipping.
After determining that it wasn't the knob slipping I proceeded to disassemble the front to get at the tuning potentiometer.
If your familiar with this unit you know that the potentiometer is continuous and has teeth that catch when you turn the knob to make tuning easier.
Now when I hook up my ohm meter to the wiper and to either end of the potentiometer all I get is an OL reading and when I turn the shaft the reading jumps around wildly. If I connect the meter to the wiper and to the case of the(I am assuming this is correct?) potentiometer I should get a reading of Zero ohms but again the only reading I get is OL.

Am I safe in saying that the potentiometer is bad?

If so how do I go about figuring out what type of potentiometer I need to replace the bad one?
The schematic doesn't tell me what value it is and there isn't a parts list or part number either.

I hope I have made myself clear enough to be understood,if not please let me know so I can try and make things clearer.

Any help on this would be greatly appreciated.
Thank you

If there is a decent SNR you are correct.
If the SNR falls below a certain value then
the reverse is true.

That radio shouldn't even use a potentiometer for tuning. IIRC, it uses a digital sensor similar to the one used in a computer mouse. On one side there is an infrared LED, on the other a photosensitive transistor or diode. In between is a wheel with many square teeth on it. As you turn the tuning knob, it moves the wheel and alternately interrupts the light from the LED from getting to the phototransistor. As this happens it causes a pulse that is sent to the tuning IC to change the frequency. On either side of the wheel to center should be a microswitch that tells the IC which way (lower or higher) the frequency should change.

dB is a ratio, not a power.

Hi,
Well,from what I can see this is a potentiometer.
There isn't any infrared LED or photosensitive transistor or diode.
Now you have me wondering what's going on...?

Thank you

I'm not sure what you mean by the "probe". The deal with Reed Solomon
is it is a non-binary code, which was a big deal at the time. The
buzzword is Galois mathematics. There wasn't any hardware that could
handle the code when it was invented.

Clayton,

Just looked at the schematic. It's definately not a potentiometer. It doesn't show the internal workings of the device, but it's definately an encoder of one type or another. One leg has +5VDC to it, the other two go to the logic board as connections SA1 and SA2. It's possible that it's nothing more than a momentary contact switch that sends pulses to the logic board for up/down frequency.

E-mail me and I can send you the schematic.

For Sale: Icom 25 Amp Power Supply

I have an Icom PS-125 I rec'd when I bought my Icom 746PRO, and I do not use
it (as I had a 20 A Astron in my shack).
So I decided to sell it.

I have not used it at all.

Price 145.00 Shipped to the 48

W8WCA

You really should not be working on this rig if you think tuning is
accomplished by a pot. This era rig has to use a mechanical or optical
encoder. Send it in to a repair location.

I'm thinking of taking my Collins 32V-3, 30S-1, 651S-1 to the Peoria swap this weekend. Asking prices are $2000.00, $1600.00. $1000.00 respectivley. I would consider trading for older US made dreadnought guitar by Martin, Taylor or Gibson or perhaps an older US made 5 string banjo. Also have a Cubic R3030 dual VLF, HF Rx; $2000 and a Drake L75 for $1000. Driving up from Tulsa. Any interest?

Easy. "dB" in general usually refers to acoustic power, where the reference
is some ungodly small power level (10^-12W/m^2 IIRC?).

I forget if there's a similar radio context used...

Tim

The answer is this:

It would be far more suceptable to interference than the AM equivalent.

The far higher bandwidth gives you a far higher noise bandwidth than the narrower AM equivalent.

So because of the large bandwidth, AM would beat it hands-down.

Sam

I think you need to be a bit clearer in your thinking. I see several people have commented on your use of dB and it seems Mike dealing with the digital side so I'll not pick up on those. I'd like to comment on " the antennae and receivers are so sensitive that they can pick signals as low as........" and your other comment about wide bandwidth.

Firstly, a "sensitive antenna" isn't a good concept, better to think in terms of gain.

However, more importantly, sensitivity isn't just about how "small" a signal your receiver system can "pick up"- you can (in theory) just add more and more gain. The issue is the ratio of the signal to the noise- that is the noise your receiver introduces and that which is "picked up" by the antenna. Winding up the gain doesn't help much with the latter- the noise in the available bandwith is amplified as well. Often a good way to get a better signal to noise ratio is to reduce the bandwidth so, before you get too hung up on having a wide bandwidth, think about what you need to do the job.

I also notice someone mentioned Galois- there was a thread some time back in uk.radio.amateur where I explained the maths behind these. I'd sure a search of Google Groups will turn it up.

You need to do a lot of studying on how to use the dB. Without a
reference, it is meaningless. The classic use in audio was 1 mW into
600 Ohms = 0 dBm, and yes, there are a number of RF uses for the dB.
Either in reference to one of several different reference levels, or as
an absolute ratio, such as the input to output level of an amplifier.

Because of phishing, trojans, and other very smart crooks trying to get
into my account, and also because of Paypal complaints that are legion,
there is no way I would link up my main bank account with Paypal. When
I sell something on ebay, I request payment by a money order, when I
buy something on ebay I pay by money order. If the seller wants Paypal
only, I move on to the next listing. I have noticed that more and more
sellers are glad to accept money orders, especially individuals who are
selling their own stuff. I have had no problems with Paypal but there
are just too many really clever scammers working the internet. I
maintain a tiny account in a different bank to handle fees: if I do get
hit by a crook, or by Paypal, the loot would only be about $5.00. In
addition, in Canada, interbank money transfers are safe and inexpensive.

The fact that it has a V+ connection suggest that it is a quadrature optical encoder. When you turn the encoder clockwise, channel A leads channel B; counterclockwise rotation, channel B leads channel A. That is how you get the directional cueing.
You need to check if there is 5V at the V+ terminal. Your wild meter readings tell me that the unit is outputting the 5V pulses when rotating. Get ahold of the schematic from mods.dk and go through the circuit. You could have a bad uP, in which case the radio is now trash. Hopefully, that isn't the case.

>> It would be far more suceptable to interference than the AM equivalent.
>
> Including heterodynes?

Theoretically, with optimal decoding, you require around 3dB C:N to decode an AM digital signal.

3dB C:N as opposed to the 20dB C:N that you need to get a good AM signal sounds to be a winner.

But AM would be about 30khz bandwidth, and this PCM signal would be 3mhz.

That means that the bandwidth gives you at least 20dB less sensitivity, so comparing the signal bandwidth-wise, you only require 0dB C:N across the same bandwidth to get the AM signal.

So you have a 3dB advantage for conventional AM over PCM.

Next, let us look at the nature of AM and heterodynes.

By the nature of audio AM, you will find that a single heterodyne can degrade the C:N to as low as 10dB before it becomes perceptible.

So therefore in the same bandwidth with PCM, you then have -10dB C:N, which is not enough to decode the PCM.

Therefore, PCM is inferior to AM, and you would not only be wasting precious bandwidth, and face considerable issues with other transmissions and the physical design of the antenna, transmitters and receivers, you would also find that it is nowhere near as effective.

Maybe studying something like GSM compression or MP3 compression formats, FEC and COFDM or similar may be your answer.

COFDM with a good FEC system is one of the most robust methods to transfer digital data in the presence of heterodynes there is. With the correct encoding and decoding techniques, you can have easily -80dB C:N because of a heterodyne some 80dB stronger than your signal, and the data would be still decoded correctly. Theoretically you could have hetrodynes thousands of dB stronger than the carrier, but unfortunately the reciever technologies are nowhere near that advanced yet, but even with cheap decoders, you could aim for around 80dB as a realistic goal under ideal situations (which is what you appear to advocate).

4146. Skype and Ham Radio

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-13 22:41:02 UTC
From: sailtamarack@yahoo.ca
Message-ID: <1158187262.707921.224640@b28g2000cwb.googlegroups.com>
Source record: 7532

A few days ago a local ham and I were discussing QsoNet (qsonet.com) and its effect on the future of ham radio. My posting on QsoNet in this newsgroup generated some interesting feedback.

There is no doubt that VoIP is having a big impact on ham radio. Early programs like IRLP were beneficial in linking repeaters and provided a cost-effective alternative to satellite, land-line or UHF connections. Next generation programs like Echolink and eQSO have RF connection capability but also allow PC based users to interconnect PC-PC, (a free telephone alternative). To me these programs appear to be the same as IRC, Messenger and all the other PC based VoIP software.

Then along comes Skype. People are signing up in droves and it is now owned by eBay. Recently I heard some hams on the local repeater talk about their Skype calls to other hams. The comment was that it was better than HF without all the noise, fading and interference. On one occasion they left the repeater for Skype in order to finish their QSO because it was more private.

I do not run Skype on my machine but my friend showed me the directory, listing all the hams (using their callsign as ID) that had signed up. I was a bit surprised to see how many fellow hams were now using this program.

My question to those of you reading this newsgroup is as follows: Talking around the world is now free, easy and noise free. Do you think Skype and programs like it (QsoNet, PC Echolink) are contributing to the demise of amateur radio? Is the mystery or mystique of radio communications evaporating due to these programs and "out-of-the-box" radios.

I think this is the future and I don't like it!!

Roger - a "relic" ham

Like Michael stated dB is a logarithmic reference-less ratio value.

You can use dB for things like amplifiers that have a gain or
attenuators that have a loss for example. The gain of an amplifier can
be expressed in dB because the reference value is the input value of
the amplifier, which will allow you to calculate the output value but
if you are speaking of a value of power or voltage by itself then you
need an absolute scale with a reference quantity.

Absolute scales would be dBV, dBuV, and dBm. In those terms the
reference is 1 volt, 1 micro-volt (0.000001 volt), and 1 milliwatt
(.001 watt).

The reason you need a reference value is noise prevents you from
measuring 0 Volts and 0 watts accurately so you need to use a small
reference value in its place and so everyone agreed to use these
values.

Definitions are:
dBV = 20 * log (volts / 1)
dBuV = 20 * log (volts / 0.000001)
dBm = 10 * log (power / .001)

So for example:
30 dBm = 1.0 watt
0 dBm = 0.001 watt (the reference value)
-30 dBm = 0.000001 watt

Most of the time in radio dBm, dBuV, and watts are used.

Given you are discussing use of the dB, I think the above leaves a bit out.
You can't use 0W as your reference because, given the definition of the dB,
you'd need to divide by 0 which, as I'm sure you know, isn't acceptable.

Hi Brenda Ann,
Ok,I got a closer look at the switch and it isn't a pot(not that I was doubting you)that's for sure.
Thank you for the offer on the schematic,I just got one downloaded.
Is there a way to test this switch(out of circuit) to see if its the culprit?
Do you think that this is even what could be causing my problem?
I did notice that if I turned the knob real fast I could get a 5-10 KHz change on the display but that's it.

Hi rEn,
I'm not seeing a lock feature on the rig or in the manual.
That would be great if that was the problem though,but I can get a a few 5-10 KHz change on the display when I turn the knob but that's it...its like its slipping in a way only everything feels tight.

Dale,
Your right,I probably shouldn't be working on it but there's no better way to learn. Plus when you don't have the money to get it professionally worked there's not much else to do.

Hi Pete,
Ok,I will put the encoder back in and check for 5 volts on the V+ terminal.
If I do get 5 volts then I might have a bad uP(what's that?)is there a way to test that as well?
I sure hope the radio isn't trash,I would really love to run it as it has a bunch of features non of my other radios have and I sure wouldn't be able to afford one with these features.

Thanks for the help everyone its most appreciated

Nothing, it's just indistinguishable from a 0db signal.

In other words it's about half the amplitide of a 3db signal...

It's a logarythmic scale.

Bye.

No, without a reference, its use is meaningless. He was trying to
use dB for an absolute signal level, not a ratio.

Your righteous indignation would probably have worked better if you
had provided a valid URL.

You are correct. That's what happens when one gets freally p*ssed off! The URL should be:

http://w2agn.net/qrparci.html

Thanks Chuck!

Chemistry lesson for the day:

Be careful what you call the cathode and what you call the anode.
Oxidation ALWAYS occurs at the Anode, and reduction always occurs at
the cathode. The oxidation process results in a chemical losing
electrons, and the reduction process results in a chemical gaining
electrons. (Mnemonics: "oxidation" and "anode" both start with
vowels; "reduction" and "cathode" both start with consonants. "LEO sez
GER": Loss of Electrons is Oxidation. Gain of Electrons is
Reduction.) In a cell delivering power, the ANODE is the NEGATIVE
terminal--the electrons given up in the oxidation chemical reaction
come out there. If you re-charge the cell, the roles of anode and
cathode are reversed. You feed electrons into the negative terminal,
and (with luck) cause a reduction reaction where the chemical at that
pole picks up the electrons and is converted back to what it was when
the battery was freshly charged.

Cheers,
Tom

So what is acoustic dB?
http://home.new.rr.com/trumpetb/audio/dBexamp.html
SPL, I should say.

There it lies, x dB on the left scale.

Tim

That is a SPL chart with the dB levels referenced to 0 dB SPL =
0.0002 ï¿½bar.

Sex? I didn't see any reference to sex. I did, however, look at your "blog," etc., and found the answer to my question.

You are not only a moron, but possibly a dangerous psychotic one.

You are going into the "delete without reading" filter.

No, but PayPal has always maintained that the "service" they provide is merely transferring money around, so if you have your bank charge-back something that went through PayPal they *will* dispute the chargeback, and since they can demonstrate that they transferred the money from you to a seller, it's highly unlikely the bank will side with you. As far as the bank is concerned, you sent Paypal some money and they then sent it on to someone else -- unless you can dispute *that*, you're out of luck. The bank doesn't care what "someone else" might have done with the money subsequently.

That being said, PayPal does have their own fraud protection system these days. IMO, dealing with PayPal isn't as safe as buying directly with a credit card, but it's *much* safer than sending a check, money order, etc.

And others don't like homophiles who walk around with a chip on their shoulder and get in everyone's face with their sexual preferences.

Homophilia is the other face of homophobia, and it appears that you suffer from the former malady. Stop looking at everyone else through the prism of your own sexual tension, and stop projecting your fears upon those who are different from you.

Your untrue and fearful cries of "homophobe" are a way of absolving yourself from any responsibility for your own life situation. It is the same thing that blacks do when they overuse the term of "racist," and most of us can see right through that kind of rhetoric no matter who uses it.

You, sir, are playing the blame game, but it doesn't work any longer. It's been worn out long ago. Come up with something real, or else continue to remain a newsgroup fool.

Interesting threads

What about setting up two checking accounts (main and secondary) - the secondary is not linked to anything (overdraft, credit card, savings, etc)

Then keep a small amount in the secondary account ($5 or zero)

Now when some one sends you funds - tell Paypal to send it to the secondary account - when received quickly transfer to your main account.

When you buy thru Palpal -- quickly deposit the required amount in the secondary fund

In both case -- keep track of things until the transaction is complete

Whatta ya think ??

CL -- been doing that for some time now

A scope on the encoder will tell you immediately whether it is working. The
mecahnical ones were much more prone to failure than optical encoders.
As Pete said, if it has +5 on it, it is likely optical.

73,
Dale W4OP

Problem is that if PayPal tries to take funds out of the account that aren't there, YOU get charge with NSF, including whatever outrageous fee your bank charges for NSF checks, and in some states (Idaho comes to mind) you can actually be charged with a felony.

>Golly Brenda Ann'
That could happen on your main account if you aren't careful (joint checking
accounts get really messy with two folks writing checks.)

The secondary account is strictly for Paypal - nothing else.
I said open up a ligit secondary account
I said when you use Paypal to purchase
First transfer the money to your secondary account
Both the money and the account are legit and there waiting for paypal
Of course you must give Paypal your legit account humber for the secondary

account

In other words - I don't want any one (not even my wife - we have separate accounts - keeps things in order) to have access to my Main account.

CL -- works so far. Crossing typing fingers.

I had the same problem with an Icom 735. The tuning knob turns an
encoder, which had stopped working. Icom no longer sold the encoder. I
found a repairman who figured out which diodes were burned out, and he
replaced them and got the encoder working again. You might look for a
good repair guy.

It's funny that when Clayton turns the encoder quickly there is a frequency change. I repaired a Kenwood R5000 a few months back that had the same problem. The cheap plastic disc inside of the encoder was slipping from the tuning shaft. I was able to super-glue the assembly back together and get it working again. If it was my own receiver, I would have probably replaced the encoder with either a Grayhill or Bourns optical encoder.

Pete

Hi Dale,
Well,unfortunately I don't have a scope(Yet...I know a scope is a must have when working with this stuff,that's why its at the top of my"Must Have List")so I am going to take a chance that the encoder is okay once I reinstall it and test for the 5 volts on the V+ terminal.

Hi Bob,
I wish that were an option,but right not it just isn't going to happen. This stuff has always been a big interest to me so what better way to learn.

Hi Pete,
Hey,I better take the encoder back apart(I had it apart once and cleaned it...there's not much to an encoder is there)I never thought to check and see if the disk with all the teeth was slipping on the shaft. I will check that before I put the encoder back in circuit.

You mention replacing yours with a Grayhill or Bourns optical encoder...If I find that my encoder is the culprit can you just put in any old encoder? as long as it fits the space and voltage requirements?

Here I go putting the cart in front of the horse again,I better check the things you all have mentioned first before I do anything else. I'll let you all know what I come up with.

Thank you everyone.

I buy components there all the time. Granted, they are not my
one-stop-shopping place, nor are they the first place I go to,
but when I'm in a pinch and need something now then they often
have very simple, common components (an opamp, led, connector,
pot, etc.)

> I think this is the future and I don't like it!!

"demise of amateur radio"? Perhaps it depends on how we
define "amateur radio". If it is simply a way to communicate
with others, I think you may be right. OTOH, people who have
been though disasters that destroyed "conventional" communication
channels know that anything dependent on the internet (whether
landline-based, or even satellite-based which are still depenent
on terrestial terminal facilities) is completely unreliable except
under ideal circumstances. I fear that as hams are attracted to
this shiny new, easy, "free" mode of communications, our
ability to use "old-fashioned" point-to-point RF (by whatever
mode) will atrophy.

What's a credit rating? I haven't used credit for anything for over
20 years. Its been cash up front, or nothing.

You might not care about your credit rating but you will care when a
lien is placed against your home.

And if you were as financially astute as you like to think you are, you
would know that companies and the Government use your credit report to
decide whether they will hire you, give you a security clearance,
determine the rates they charge you...and many other issues that affect
you.

Your credit rating matters.

And I also note that many of those who are bad credit risks deal in
cash only...because it is the only way others will deal with them.

Ironically, your credit rating will actually be "less than perfect" then! :-)

Assuming you don't need a new mortgage any time soon, I suppose you're set.

Do you have a credit card? I know it's possible, but it sure seems like a
pain to live without one these days... especially for things like renting
cars.

Hi there i just have a question. I am considering getting a kenwood ts450sat because it's a solid radio I know and cause it's already set up for a blind ham, a major plus to me, not to mention I already know how to use it :) anwyay I have noticed that the ability to find mods and info has about dried up, all I see nwo is ads for crap on ebay that bear no resemblance to what I search for, even ham radio mods newsgroups seem to be gone, so i taught I would ask here if someone can post a goo site or sites that have all the mod info for all mods available to the radio
thanks

I'm hoping it'll soon be illegal for companies to use credit reports in determining whether or not they want to hire people. I'm pretty conservative myself, and I have excellent credit, but making it harder for someone who has bad credit to *get a job* strikes me as absurd: Sure, most people have bad credit due to spending too much on HDTVs or fancy cars or whatever and *not* on baby formula and generic brand blue jeans, but even so, the humanitarian in me says it's better to let these people at least get a job and *try* to get their monetary affairs in order than keeping them jobless and forcing them onto the welfare rolls. From an economic point of view, I'd rather have individual companies bear the purported risk that those with bad credit are supposedly more likely to steal, defraud the employer, etc. than foist all those people onto the taxpayer's teat.

For security clearances looking at credit reports seems reasonable... I'm told that for security clearances at a high enough level the feds go all the way back to your childhood to dig up dirt on you that could be used in a blackmail setup.

For interest rates... well... hard to say; I can see more of a legitimate risk there than with hiring.

The Watchman is:
Norman P Triantafilos
KB9YGD
2634 Warren Street Lake Station IN 46405

Poor Norman, you really done it this time, sending that shit to my friends, they all forwarded it to me, it is no wonder you have no FRIENDS, your just a mean nasty old bastard that no one likes.

For a man who is 60 years of age it would seem by now you would have some sort of sense about you, but you know some people stay suck on stupid all their life, like you.

Hey just to let you know I have a copy of that picture you sent me of Don K9RRG sleeping on the train that you doctored up (very nasty) you are shamefull Norman no wonder Don took all that crap to the Verizon Telephone Company and turned it in to them, I hope they prosecute you to the fullest extent that the law allows.

Anyone who reads this listen to Norm KB9YGD on 146.520 simplex and sometimes on 146.775 repeater and in the evening 3955 he usually leaves before 10:00 cst this simplex frequency is in NW Indiana, also 27.365 (channel 36) cb that's where he truly belongs.

Poor Norman, I told you to stop sending that stupid ignorant crap to me, you wouldn't listen, only a MORON would do the things you do, I've filed a complaint to Bellsouth about these natsy pictures you send, I knew as stupid as you are you would start some kind of shit that would backfire on you.

The PCARC will see some of the emails and nasty pictures you have sent, I've made plenty of copies to pass around at the meeting, I'm getting Bernie to come so we can tell a little ditty about you, ah ha ha ha you'll be the talk of the town, that's what you wanted ain't it to be the center of attention?

Hi Clayton,

You should be fine with any Quadrature encoder. 32 pulses per revolution is about right for the type to order. As long as you have V+ and ground hooked up properly, it will work. The only mistake that can happen is if Output A is interchanged with Output B. In that case, the receiver would tune backwards.

Pete

But we need to improve the operators first.

Step 1: No more automatic renewals. Individuals must retest and
pass all elements required for their license class.

Step 2: The passing score for written exams needs to be raised to 85%.

Step 3: Code elements should be 13 wpm for General, and 20 wpm for Extra.

Step 4: Make the no-code license one year non-renewable.

Email these to President Bush and tell him you want to help with the war
on terror. Thanks.

FS: AS NEW Icom IC-720A HF transceiver. This transceiver is as new, used a very few hours and stored. There is not a mark on it. Comes with Power Cord, copy of the manual, and Icom IC-HM-7 mic.
This radio works, but the volumn control is scratchy and the Band Switch/Relays need cleaning.
I have to rotate through the bands a couple of times to get it to work right on each band.
There can not be any wear. It has to be a cleaning problem. Price is $275 plus shipping from 79602
I can send digital picture upon request.
Thanks, Charlie Hugg, K5MBX

I had quit following this mundane thread for a while, looking in only on occasion. I must wonder - it is being "recommended" "apparently" by "slow code" to raise the CW rates to 13wpm General and 20wpm Extra.
DUH - we "were" there already.

I've said before and I'll say it again. I'm not a "code" lover, but I've learned it and used it and sometimes listen to it. Will it save a life? Probably not - but still - the chance is there just the same as for any other mode. You use what you have available. CODE did NOT keep the crap off the ham bands, so to put it back in or KEEP it in, is sort of useless to argue about. While "I" think 5 wpm is about as easy as you're going to get - it seems far too many still cry about it. Yes, you could make the written tests tougher - but that sucks too - because in a sense - they're "not" any tougher when you're being given the answers in a book. And most of those books cover "just" enough to pass the exams - they by no means "teach" you electronics. In days gone by - you had to have at least a basic grasp of electronics to be able to pass the exams. I'm not saying you had to be a "Technician" with years of experience - I'm saying you had to know more than these books teach. At that time - you had NO clue what the FCC would ask. I've still got sample study guides sent by the FCC if asked - and they were "vague".

CODE, EXAMS - nothing will keep the riffraff off the bands. This is a lawless society anymore - people do as they damned well please. CB got quiet in many areas not due to Cell Phones - it happened long before. It happened in many places based on what I've learned - because of the garbage. Ham will be the same way if it isn't respected. We're in a NO WIN situation.

I find it amazing, people with illegal amps and radios will defend them to the hilt - like a murderer caught with a smoking gun - claiming his/her innocence. If the government agency deems them illegal - then they are - no

excuses. Just like the speed laws - if the road is marked 25, that is what it is - plain and simple. If we all took responsbility for our actions - maybe things wouldn't be so damned bad. I know lots of cbers who got out of cb BECAUSE those with the illegal amps and radios "splashed" so bad, they couldn't even talk on the radio. So, tell me again - how those illegal radios and amps are helping? Hams have a rule of using the minimum necessary to carry out the communications. IT DOES WORK! QRP (Low Power) is part of the challenge! 500- 1000 watts or more - any dummy can do. If you want to be known as an "Alligator" station - ALL mouth and NO ears.... keep using that garbage. Who wants to talk to them? That is as irritating as static on an AM radio station. Listen to Channel 6 on the CB - there is a guy who constantly talks - HOW he hears anyone is beside me. I think he talks just to hear himself talk. AND being he is in the south, he has to be running some power. If everyone operated like that, the bands would be total chaos, no one talking to anyone - only to themselves. How the FCC hasn't busted him yet - is amazing.

Just my 2 cents.

Remember the "No child left behind" policy of our educators of some years ago? What you are seeing today is largely a result of that philosophy. No responsibility, accountability or respect for others or oneself.

I worked as a radio dispatcher in the Air Force during my Sixties tour. That was the foundation of my radio experience. I owned a CB set for a year before I actually transmitted. The style was so alien and "cutesy" it made me want to barf. Then the syntheisized 40 channel rigs came out and everyone could afford one. End of CB for me.

I then went on to get my commercial ticket with radar endorsement. A year later I got a ham ticket and two years later I got my Extra. Code does not come easy for me. It was a constant uphill battle to pass the 20 wpm code test. But eventually I passed it.

Turning on the radio today, there are still some good folks on ham radio and not all of them are old timers. But a lot of the same types that ruined CB and now ruining ham radio. I can't remember the last time that I actually transmitted with my station. I'm about ready to sell it off and chalk it up to history.

Amplifiers are not intrinsically bad. Abusing amplifiers is bad. If you work 75 or 80 meter telephony, an amp is an absolute must have, especially if you have a less than full size dipole at a decent height.

I enjoyed ham radio more when folks knew a bit about electronics. It gave us something to talk about that we all hand in common. Ditto CW. No one had more trouble learning CW than me, believe me. It still gives me a headache to operate CW for more than a few minutes, but I wanted that Extra Class ticket and that was the only way to get it back then.

I honestly can't tell whether you are being facetious or not, but you've struck upon my rawest nerve.

Whatever happened to personal property rights in the US? Since when can't a person do anything within reason on their own property? CC&R's were originally meant to keep people from stacking trash a mile deep or parking junk cars on their lawns in perpetuity. This is fine. When they started telling people they couldn't have a TV antenna, satellite dish or ham/cb antenna, as well as what color they could paint their house and whether they could have a tacky lawn gnome, I think they went too far. People are far too easily offended by the stupidest things these days. Grow a SKIN, folks. It's a free country (debatably).

Good luck with it. :) You'll find CW is fun, rewarding and will add to
your overall enjoyment of ham radio. See if there are people in your area
that do on the air code practice sessions. If you have an HF receiver, you
can tune in CW transmitions on lower portions of the bands.

Believe me, I'm not "knocking" amps, just the "evidenced" misuse (abuse) of them. Yes, they "do" have their use and place. But most of those using them "THINK" they have to "rule the airwaves" to converse. Their splattering ruins it for ALL.

Source record: 7577

In spite of being a ham for 50 years, radio operator in the Coast Guard and an Extra, I have never been able to copy code in my head. My brain crashes after 3 or 4 characters. Take away my typewriter and I might as well be a CB'er.

I see MFJ has a gadget they claim you can set next to the speaker and read the text.

Seems like a great tool to assist the memory.

Do they work?

I just downloaded a program called GetCW and glad I didn't have to pay for it. If this works, I would like to talk to someone who can help me get it going.

Thanks,

Jack NR9Q

Yes it works if the code is well sent and the signal is reasonably strong.

>
> I just downloaded a program called GetCW and glad I didn't have to pay for
> it. If this works, I would like to talk to someone who can help me get it

>

Yes this program works. Again the code must be well sent and the signal
reasonable strong. I personally think it works a little better than the MFJ
code reader as you can set the filtering level.

With the free version, you must go into the setup menu everytime you start
the program and specifically select the sound card. It doesn't "remember"
what you set the last time or what the default is and you cannot save the
setup in the free version.

From what I have read on "head copy", one needs to start hearing the group
of letters that form the words not try to string them together out of
individual letters. I can't do this yet myself as I don't work it enough.
However I do hear "CQ" as a group and instantly know what it means without
even having to think about the individual letters. And I do some
contesting, I hear the abbreviation "test" as a group and recognize it as a
"word" without having to think the individual letters.

You may want to go here and try another free program. Some of the multimode
programs are suspose to work well.

http://www.muenster.de/~welp/sb.htm

Didn't they call the ones with a typewriter a ditty bobber or something like
that ? Didn't really learn the code or how to type but when the characters
were sent the finger hits the correct key. Not putting you down, just the
way I heard the military taught the code to some.

A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.soldersmoke.com

Listen at: http://www.soldersmoke.com

SolderSmoke #32 (September 16, 2006) is now available
on http://www.soldersmoke.com

Topics covered in #32:

-- HW-101 FT101 Hybrid Rigs.
-- BNC and RCA phono connectors.
-- Changing the clutch and oil on an HW-101.
-- Third order intercept rules of thumb.
-- Modular circuit boards.
-- Babbage difference engine.
-- Hardware to crack enigma.
-- Bills video of his DSB rig.
-- MAILBAG: KC2IGJ, G4GOY, WL7M, D. Gaskill, Gary
Beach

Tired of listening to Led Zepplin or NPR on your
I-Pod? Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in
London, England meet regularly on the ECHOLINK system
to discuss their homebrew radio projects. We are
making them available as PODCASTS.

RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your
computer.

http://www.soldersmoke.com

All our programs are available here.

We hope you enjoy the program. Please send us feedback.

Bill included rec.radio.amateur.misc in the list of newsgroups he posted the original message to. Since rram seems to be reserved for flames, discussion of amateur radio is evidently off-topic.

..

>> SolderSmoke!
>> A SHOW FOR ELECTRONICS HOMEBREWERS!
etc etc
==========
Oh ,I see, the Professor is selling (partly illegal)CB Power amplifiers.
Probably no solder smoke on his premises ......just carton boxes filled
with equipment ,ready for shipment to truckers' watering holes.

Bill , I enjoy listening to your podcasts ....keep up the good work.
Just ignore the above junk seller ,who apparently is NOT capable to
produce any civilised and intelligent response.

Frank GM0CSZ / KN6WH

When I was HL9ACT, mobile operation was disallowed in South Korea. All
ham radio was disallowed in North Korea.

Under FDR, amateur radio was Disallowed in America.

Every on-topic post helps rram, even if only a little bit. Keep these
posts up. I added soldersmoke to my bashpodder list, and will be
listening to the podcast to see what it's all about. Number 32 sounds
very interesting so far.

Interesting. Liberals looks at drug abuse as a victimless crime, just people need some help, free needles, methadone, and billions in drug counseling and counseling centers.

All their rock and roll heroes and hollywood legends are stoned all of the time.

But when Rush avails himself to to these legal views that the liberals have put into place...

"he's a drugged-out loser."

The crap on news:sci.electronics.misc is crossposted from
news:sci.electronics.policy, which is a watering hole for the biggest
idiots on usenet.

Rush absolutely should have taken the same deal that the dems set up
for themselves and their "drugged-out" loser children. Wonder why jobs
go overseas? Few in America can pass a drug test.

NORMAN TRIANTAFILOS Story Part A. (The Story of a Coward)

Norman was born in Gary Indiana he is now 60 years old, it would seem with age you get a little more intelligence, but not the case with old Norman, he just gets more psychotic.

Norman resides at 2634 Warren Street Lake Station IN 46405
Phone number is 219-962-8416 a little shack garage that's converted into living quaters that imo should be condemed.

Norman has many alias, why because he is psychopathic; psychoneurotic with the mind of a criminal, Norman suffers from dementia praecox, a severe mental disorder characterized by some, but not necessarily all, of the following features: emotional blunting, intellectual deterioration, social isolation, disorganized speech and behavior, delusions, and hallucinations.

Norman has a general class amateur radio license with the call letters of "KB9YGD" he characterizes himself as "The Real Ham" in reality he is nothing more than a whinning child, he is dangerous and carries a gun (9mm auto pistol) with him at all times due to his insecurities, be aware that he could snap at any given moment and cause harm to himself or others.

I have informed the Lake Station Indiana athorities and they are well aware of this criminal and watching him, they have several reports on him from neighbors who live close and in fear of his psychotic manners, he especially hates blacks and uses the word "nigger" he imho is a racist and may be a card carring KKK member.

WA9TSQ Bernard S Gawronski of 951 N 100 W CHESTERTON IN 46304 was receiving threating emails from Norman over a dispute at the PCARC meetings, all were sent in an annomymous reamailer from Norman Triantafolis, this I have proof of.

Norman was an alcoholic doper who stayed high the majority of his life, he claims he has reformed, but one has to wonder if he still is on the booze or drugs from some of the posts he submitts here on these groups, he lost his job at the E,J & E Railway for reasons unknown, I have heard but can not verify he was fired for reasons of a mental disorder.

"DISCLAIMER" These are my opinions, some are facts and some are speculation, you decide for yourself....

Nah, they're ALL drugged out losers. Some have lost more than others. Rush
is fortunate in that he got busted before he could do more damage to himself
than just his hearing loss. Most of the rest are at least half brain dead.

Hmmm. A radio personality who railed against drugged out hippies and
"tree huggers" is caught in the act of illegally obtaining drugs for his
own use. Purchasing drugs in a parking lot with shoe boxes full of cash
for his local pusher.

Who is hypocritical? Linearity is a curious concept when applying it to
this obese fraud.

Al Franken had it right: "Rush Limbaugh is a Big Fat Idiot".

If YOU'RE offended that's YOUR problem.

"10 Meter Amateur Radio Band Coverage (26-30MHz)"

Prima Facie Illegal. They can't be sold IN the United States, or TO
the united States.

Next time you want to talk about the law, read it first - you'll look
less foolish and less crooked.

4281. FT-1000MP MKV headset sound level

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-18 11:44:05 UTC
From: Thierry
Message-ID: <450e868d@news.vo.lu>
Source record: 7467

My FT-1000MP MKV-Field has a problem. May be could help me before I contact a dealer.
The control button of my headset exits A and B (below left of the rtx) doesn't produce any effect (or show both the same level of audio). The sound is now loud and no more softy as before in the speaker. So I can more adjust the sound.
Is there a device or component that blew out or a cabling or menu to check ?

Thanks
Thierry

As I recall a Mill is a all caps typewriter used to copy messages and radiograms by the Military.
On our Navy transport planes, we had such a device at the Radio Operators position.

See URL:
http://www.telegraph-office.com/pages/wireless_gallery.html

But Mill has historical reference -- see Henry Mill - URL:
http://inventors.about.com/gi/dynamic/offsite.htm?site=http://www.maxmon.com/1714ad.htm

CL --- hunt and pecking

4293. Convering HW-101 to 17 and 30 meters

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-18 20:24:17 UTC
From: Rocketeer <cscholl@izzy.net>
Message-ID: <1158611056.991430.207340@i42g2000cwa.googlegroups.com>
Source record: 7479

Hello the Group!

I have an Heathkit HW-101 that operates well on 80/75/40/20 and is useless on 15/10 meters because of all the higher frequency junk in this area. The Area is Ann Arbor/Ypsilanti near the WAAM antenna group.

I want to sacrifice the 15 meter and one of the 10 meter positions for the 30 and 17 meter bands. From what I can see on the diagrams and the crystals being used, I think all I would need are crystals in the proper cans at the frequencies 18.895 for the 30 mter range and 26.896 for the 17 meter range.

I realize that just changing out the crystals may not be all that is

needed, however, this is the first step. Any Heathkit resources out there?

And are the crystal cans of the HC6/U variety or the HC33?

And, it appears not to comply with several specific FCC regulations:

- It has gain through the CB frequencies (violates 97.317 (b)) and is thus not eligible for certification, which is required for amps operating below 144 MHz. The FCC may be about to relax or eliminate the 97.317 rules about external amps operating in this frequency range, but for the moment this reg is still part of the law.

- Its second- and third-harmonic distortion levels are roughly 10 dB too high to meet the -43 dBc requirement (violates 97.307 (d)).

Are you sure you wouldn't rather sell the '101 and use the money to help
fund a radio with the bands already built in? The crystals are part of the
necessary changes, but you'll also have coils and caps to change or modify
on the switchboards, perhaps finding new taps on the output coil. Looking
at the manual, it seems that some of the switches appear to be sliding
shorts, so you may have to reposition the 20M band components.
This will reduce whatever value it may have and when you're done, it will
still be a 20 to 30-year old radio with a non-standard modification.
That being said, go for it! There are various ways to get information,
manuals etc. Use a search engine. Sorry, I think crystals are HC6, but
can't be sure. It's always possible that a change was made after I got
mine, in early '70s.

> and fine example of why we need to end code testing soon

Code testing should NOT be thrown away. It is the one thing that keeps SOME of the lazy bastards off of HF. At least off HF legally! I hated to see the 13 and 20 WPM requirements lifted. I took the 20 WPM right off the bat. 5 is easy... there are 6 and 7 year olds, and 60 and 70 year olds who pass that. 13 isn't hard either. 20 just takes some practice. I went from no license, to extra in 1 year... when I was 15 years old. I went from knowing no code at all, to 20 WPM in 3 weeks of 2 hours per day listening to code tapes and copying the ARRL bulletins.

Code is a tradition. And don't try and compare code to slavery or something completely ignorant like that. They are apples and oranges.

Now, im sure you will all want to attack me for what I have said. So, go ahead. It doesn't matter to me. I have my extra. So, I really don't care either way. Quite honestly, I don't even operate anymore. The mentality of the people on HF has dropped so badly, I hardly ever operate except to speak to a family member once a week that is in Canada. And I talk on 440 simplex to a couple people here locally.

Reading this newsgroup reminds me of why I don't get on HF anymore. 75 meters and this newsgroup and many things in common.

indeed the floks like Wisemen and Slow code Heil and Robeson inheritied
the ARS from people of some vision and and have slowly had it pried out
of their hands.

they have failed to adapt and change with the time and thus lostthe the
place of the ARS in techinical inovation (wether that can be regained I
don't know) the have lost control of the ARS now. sadly the Nocoders
have not manged to fully grab control either

Received my License in 1977.

Funny I don't feel like I've lost anything, I've gained a lot since I
started, but haven't lost (well maybe the 220mhz
theft by lying scum of UPS but that's another story)

Curtis-

The heterodyne crystals are HC6. I have one for 40 meters in my
collection, although it is probably the bad one I saved. I think it was
soldered into the PCB. If so, a wire-lead version should work as well.

Be aware that the heterodyne oscillator is one of the weak points of the
radio. It requires a very high-Q crystal or it won't oscillate. You may
be able to modify the circuit to increase feedback, and improve its
performance.

According to my notes, the 20 Meter and 15 Meter heterodyne coils are the
same part number. I don't know whether they use the same one for both
positions, or have two that are individually tuned.

Considering the problems you face, it might be easier to convert 20 Meters
to 30 and to convert 15 Meters to 17. Converting one of the Ten meter
positions will be more of a challange.

73,
Fred

> That may be a little more acceptable. HAHAHA

I remember when RRAP was respectable, then Mark morgan came back and Woger found someone he could pick on with ease, like taking candy from a baby. It doesn't help for Mark to admit he doesn't have anything against homos, and Woger teases him about it. I have to admit I've got caught up in it too when the only reason I came back was to try to make the group respectable again and try to get usenetter hams to support keeping the code requirement. But with Mark here now and not enough good folk left in the group, I'll probably just bow out, and the stupid and lazy can take over ham radio.

SC

4330. Ham radios don't come with kill-filters or plonk buttons.

Newsgroup: rec.radio.amateur.equipment

It's written tests and CW that keep the sick, lame, and lazy, out of your receiver, not a plonk button or kill-filter. Don't degrade receiver performance. Support keeping CW, and increasing the speed requirement, and make the passing score for writtens 85%.

TNX, 73 de Slow Code :-)

I remember Marks stupid ass posts in the late 1990's and when he left I
hoped he would give up on ham radio and stay on CB. But he came back and
now him, Llooydie, and Woger have wrecked usenet and ham radio. I hope
they're happy.

As a reader and frequent contributor to the rec.radio.amateur.antenna newsgroup, I see a large and increasing volume of messages cross posted to a large handful of groups which have nothing to do with antennas. Not surprisingly, I don't see any of the regular contributors to this newsgroup participating in the endless arguments about Morse code, testing requirements, and what it takes to be a "real" amateur. These threads seem to be increasing in number daily, involving the same participants, and have grown to the point that the signal-to-noise ratio of rec.radio.amateur.antenna newsgroup is getting seriously degraded. It's becoming necessary to fish through multiple off-topic threads to find the postings involving antennas.

There's no point in including rec.radio.amateur.antenna in the list of newsgroups you send these postings to. There are certainly groups whose readers are much more interested in participating or reading about these topics.

So my request is: Please don't include rec.radio.amateur.antenna in the list of newsgroups you send the original posting to. And when replying to a thread whose topic doesn't involve antennas, simply delete rec.radio.amateur.antenna from the list of newsgroups receiving the reply, before clicking "Send". This won't detract in any way from your discussions, and will be a relief for rec.radio.amateur.antenna readers and participants.

Thanks and 73,
Roy Lewallen, W7EL

such power you credi t me with but real SC i must decline the honor

the wrecking of Ham radio as you choose to define it is your own doing
along with Heil Robesonn Jim old posters like Yo Doc and MD you killed
the hamradio you sought to save, basicaly by trying to ram it down the
throats of the rest of us

in the 1990 the NoCoders would like have settled for something wht
Canada has in place now, presreving a lot of what you wanted

Sure!

I guess that you were not around during the heyday
of the 14.313 and 75 Meter Jamming Wars of
the late 70's and 80's.

ALL of the QRM'ers involved had a General or better
and in those days you had to pass a 13 WPM code test
to even GET ON the HF spectrum.

Your argument is as pointless as your ball-shaped fart head.

My request is: Please learn about kill files, and please learn how to take action yourself by killing all posts crossposted to groups other than rec.radio.amateur.antenna. You'll have a much greater chance of changing yourself than you will of getting everyone else to do your bidding, and you'll be a whole lot less frustrated once you do figure that simple task out.

I have a theory about hams who can't even master a news reader, but I'll leave that discussion for another thread.

Chris, we don't mind using the filters. The problem is they (you) are
changing the subject every single day so we are constantly making new
kill filters. THATS the problem.

No, YOU are the problem. A proper kill filter will kill all crossposts,
no matter what the identity of the poster may be. If you really knew
how to use a kill filter (and you obviously don't), morphing posters
would present no problem at all.

You also top post, and that makes it obvious that you have a lot yet to
learn about Usenet.

Kill filters are helpful, but only to a certain degree. I have 6 kill
filters for the "slow code" gang, but they have so many aliases, a lot
of the crap still gets through. And the same crap is inundating many
of the other amateur radio news groups. Some of the responsibility has
to be put on the duds who have nothing better to do all day long than
contemplate their slow code navels.

You should make sure that you have a proper news reader and then configure it as has been outlined in the news.answers FAQs for the last 20 years or so. If Thunderbird won't cut the mustard, then you should drop it in in favor of one of the other three or four *free* newsreaders which can do the job.

Usenet users should take responsibility for their own environment and stop asking others to do it for them. Too many people have a cheesy newsreader (such as Google Groups) and are too lazy to find a good one. They are often the people who complain the most loudly about crossposts instead of doing something about it themselves.

(Hint: People using newsreaders which can filter on the Newsgroups header should develop a filter which uses that header. If an article is crossposted, there will be at least one comma in that header. To kill all crossposted articles, kill all articles with a comma in the Newsgroups header. You can also use the Xref header to do the same thing by searching for two or more colons.)

You may want to read up on Viterbi, Sequential, Turbo Product Codes
(TPC) and Low Density Parity Check (LDPC) forms of FEC to see how they
work and see if that statement still holds true!

It's truly amazing how many errors Turbo codes and LDPC codes can
actually correct even with only an additional 5% of error correction
coding on top of the data stream in some cases!

Poor old KB9YGD Norman P Triantafilos 2634 Warren Street Lake Station IN 46405
Phone 219 962 8416

Norman lives in a garage shack, he owes back Federal Tax of around 30,000.00 he hates America, he is Greek so don't turn your back on him.

Norman is being watched by neighbors, he has no friends, we use to call him crazy Norm, he has one child out of wedlock (bastard) that he never does anything for him, the kid looks just like him (poor kid).

Norman keeps all his money in his home, he can't put it in the bank because the IRS would levy on it due to the back tax he owes.(he has lots of bucks stashed in his house)

Norman's cat Tiggy just croaked (thinks more of a damn cat than his own kid) now old Norman is all alone with his pistol, he is very insecure and dangerous to himself and neighbors, they are keeping an eye on old crazy Norm.

Norman get some professional help, you need it. Norman has lots of Ham gear and tools in his garage in the back, the neighbors have cut his coax a couple times for ripping up their tv's and phones, poor Norman he is a recovering alcoholic, I use to smoke a little pot with him but he couldn't handle it and the booze together.

Now Norman claims to be a saint, a reformed drug and alcohol abuser, ah our past eh Norm, remember that black whore who took your 30.00 bucks, ah ha ha I got some of that pussy in the back seat of your caddy and you got ripped off, or did you pay to just watch, ah ha ha, you freak.

See Norm, when you talk about me it gets back, remember we were friends and I know plenty about your personal life and the years we worked together at the EJ&E RR, I'm not ashamed of anything I have done in my life, it was all a great experience and I wouldn't trade it for nothing, I have enjoyed my life, some good some not so good, at least I'm not a lonely old bastard who hates as you do, I have a wife and a nice home that's almost paid off from my settlement, 5 more years and I'm on easy street, I can go and buy anything I want at anytime, I have not lost anything especially myself as you have, I have friends and relatives close, I have grandkids that adore me, what do you have? you are such a miserable old bastard who is so paranoid someone is going to get something you have.

Wake up Norman life is too short to be a mean old nasty asshole that hates and is envious of others, you won't listen, you will die an old nasty bastard who no one will give a shit about.

Roy. I appreciate your point and I'm sorry for disturbing the
newsgroup. It won't happen again, I promise. I'm glad we have
RRAA because I had antenna questions they couldn't answer over
in rec.radio.cb

Does one long continuous wave(CW) make your antenna warm in the winter?

What kind of antenna do you use to receive CW, a vertical co-linear
ground-plane or some form of half-wave Dipole? What's Best?

Does antenna polarization matter if the CW is high speed and received
with a computer?

A lot of hams now are Appliance Operators and hate CW, how can they keep CW of their antennas?

I heard like if you hook the coax to your dipole antenna in reverse, CW comes out backwards, Like POTS would come out as STOP. Is that true?

Thanks Roy, keep up the good work! You're doing a good job. 73

Running more than 4 watts on 27 MHz in the US has been illegal since
CB became legal here - 1961 IIRC. I don't know what the rules are in
Oz.

It's always been illegal, but the amplifiers could be sold. All those
"illegal for Class D Citizen Band use" in the Lafayette catalog on
the CB page decades ago were being sold for CB use. And those and the
more underground amplifiers is what brought about the FCC rule in
the late seventies that put limits on amateur radio amplifiers.
Previously it had been too easy to sell amplifiers that were clearly
intended for CB (the giveaways were the low drive requirements and
the frequency range that wasn't much beyond the limits of the CB band),
but sold under the guise of "amateur radio amplifiers". The new
rules of thirty years ago made all such amplifiers illegal.

Nevertheless, they have nothing to do with boatanchors. They are
made today, they likely don't use tubes, they are intended for CB and
not amateur radio, and likely I'm likely forgetting other reasons.

Ten-Tec made an amplifier called the 405 for the Argonuat 505 and 509.
It's solid state but due to it's age may qualify as a boat anchor.
5 watts in 50 or so out.

Fairly rare due to the FCC rules, which BTW were dropped recently.

Geoff.

Al, yes more or less the same rules in Oz - type approval etc, but this gear is not considered as a collectable boatanchor though, so a bit off topic in the boatanchors forum - maybe an excess of cross-posting.

Simon

Actually it was 1957 when they took the 11 meter band from the HAMS and
created the "Class-D" Citizens radio service....The callsigns
were 11W1234 series of calls.
If this guy wanted to market these amplifiers and not attract the wrong
attention all he would have to say is they are for amateur use only, with
broadband coverage from 28 to 30Mhz.HAM gear does NOT require ANY "type
acceptance" at all..
It's not real hard to figure that they would indeed work on 21/24 and
27Mhz....food for thought....

You'd better look at the US regulations.

As I said, the existence of amplifiers for CB (but usually marketed
as something else) caused the FCC to bring in regulations in the late
seventies about amplifiers. It had always been illegal to use such
amplifiers on CB, but the new rules meant it was illegal to sell them.
The laws had nothing to do with amateur radio, but it did impact on amateur
radio. Those rules about amplifiers in that range are quite restrictive
compared to the general rules of amateur radio, and they exist because
another service was operating illegally.

Allright i bought an old variac from a deceased electronics guru. He had it wired for 120. the wire ing was in bad shape. so i tested it to verify it works and then i scraped the wire. the variac has been sitting for about a month. Now i need to use it and forgot how he had it wired up. an you all help?
here is a pic so you can see what im talking about.

http://i30.photobucket.com/albums/c311/kc8tpr/Variac.jpg

thanks,

I have a Yaesu FT-2600M that turns off when keyed up, then comes right back on (in all power settings). I know the radio has high SWR protection and have tested the SWR on my antenna (Comet GP9N with 9913) and it's extremely low with an Icom IC-V8000 radio at full power. Does anyone know what could cause this? It wasn't used for a year or so before this and was working fine. It was mounted in my work van for 3 years. Under the cover it looks bran new with no blown components or smells. Thanks for any help.

Chris,

Normally I would agree that killfiles and delete buttons are certainly indicated in a case like this, but there is a certain amount of newsgroup etiquette that is warranted on your part, too. You can't just do whatever you want on a newsgroup with no accountability and expect everyone else to modify their behavior to accomodate yours. You even cite Usenet etiquette in your own post, so how about doing your share in applying said etiquette to yourself?

Regards,

Al

make sure the power connections are all strong and clean. perhaps the
fuse needs replacement, or the ground connection has oxidized.

I have seen similar things when radios try to draw higher current, and
the voltage drops to below threshold voltage for the radio, causing the
processor to restart..

Hi Mike,

RF could be getting back into the radio. RF can do some funky things.
Make BOTH power leads go directly to the battery and for safety sake
fuse BOTH.
Also use heavy enough wire, say 14 gauge or better. Make sure the
antenna connections are clean and good.
SWR protection just backs off the power to a safe level if the antenna
is messed up but will not shut down the radio.
If all else fails reset the CPU. THen reinstall the memories because
they will be lost.
73 and good luck!

The Professor wrote:

>> Says those of us who are familiar with FCC Regulations.
>>
>>
> Says the clueless newbie. It's a 10 meter amplifier dumbass....LOL

anyone with any radio knowledge at all knows that a "10 meter" amp is more than broad enough to be used on 11 meters with very little retuning required (hell, the band edges are less than 600 Khz apart!).

now, there are ways to make a 10 meter amp unusable on 11, but then, it would be mostly unusable on the lower end of 10 as well. :(

so..... the label of a "10 meter amp" os pretty much meaningless, unless you can come up with a bandpass filter that has a 90+db/decade slope and a cutoff just 40 Khz from the edge of band you want to work (good luck with that as the filter would be unwieldy in both size and cost). things like this can be easily done on the upper UHF spectrum where wavelengths are short and parts are easy to fabricate..... not so in the upper HF (wavelengths >6 meters). can you imaging a cavity filter for 10 meters? it would be as big as a house and have a bandwidth narrower than your transmitters operating frequency plus its associated sidebands (am or fm) and wider still than any ssb signal (on 10 meters)

the math on this is indisputable.

My understanding for the US, is that according to the FCC, if you sell ham gear as a business, it has to be type accepted, but you can "home brew" anything you want to use on the ham bands for personal use. If you sell your personal equipment, it doesn't need to be type accepted, either. Also, if you sell an amplifier as a business, it can't operate the 12 or 10 meter band. However, it can be modified to operate it, but that fits in the "home brew" category, again.
I think the stink arose on the posting, because the person posting the original listing, advertised it as a CB radio amplifier, which is illegal in the US and from what I understand, most other countries. Notice that the original poster has not posted in a while, I believe he probably has been warned, because it is off-topic and cross-posted to more than 5 groups, which is considered spam according to the TOS with most ISPs.

What power supply are you running it with? Perhaps the problem lies there.
I've seen radios shut down on key up and come right back on when the power
supply is inadequate or bad.

Dee, N8UZE

4412. FS Drake TR-7 HF Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-23 16:01:20 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <2TcRg.385$uJ2.75@dukeread03>
Source record: 7250

FS Drake TR-7 HF Transceiver. This TR-7 has the optional CW and AM Filters. It is in very good condition and works great. It has the sticky Drake cabinet, but is not all scratched up like some of them are. All of the dial and meter lights work. I purchased it from the original owner who did not use it
much. Copy of the manual included. Price is $400 plus shipping. I also have the Drake PS-7 Power Supply that came with it, but it does not work. It looks good, but will not power up the TR-7. I have been using another PS-7 with the TR-7. I will sell the PS-7 for $50 plus shipping after the TR-7 sells.
Thanks, Charlie Hugg, K5MBX

If you want to run it at 120V with an output of 0-140V or so then connect the 120V line to the terminals marked 230V line, with the neutral (white) connection at the top. The output is on the output terminals with white on the top and black (hot) at the bottom. You should probably make some kind of cover for the terminals - the bottom left terminal will be at ~ 140V all the time and there are dangerous voltages on most of the terminals. It would also be a good idea to connect a ground lead to the frame.

>ham gear as a business, it has to be type accepted

There no FCC procedure for "type acceptance" of ham gear, so ham gear
can't *BE* type accepted.

There's certification for commercially produced ham gear, but that's a
totally different process from type acceptance, and it looks for
totally different things. Calling certified gear "type accepted" is
like calling a ham a CBer - using the wrong term (which seems to be
common practice in English for a couple of decades now)

> Also, if you sell an amplifier as a business, it can't operate the 12 or
>10 meter band. However, it can be modified to operate it

But not by something as simple as cutting a prominent wire that's
labeled "don't cut this wire". By changing capacitors and inductors,
yes - but that's home-brewing.

4416. AZDEN PCS4000 Memory Retention

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-23 23:29:45 UTC
From: Joseph Fenn <jfenn@lava.net>
Message-ID: <Pine.BSI.4.61.0609231318450.2017@malasada.lava.net>
Source record: 7254

I have trouble retaining the memories chosen for the 4 freqcy
chnls. I removed the internal (very tiny 3 v nicad) unit and
brought out connector wires from the rear and attached 3 regular
1.3 V volt nicads (double A size) and wired them in series.
This worked ok except the charging time was quite lengthy so
left the rig turned on for a aouple of days till the externals
charged up. This worked and kept the memories in tack, but
it affected the actual freq stored in each chnl thusly.
Cant set the freq offset to exactly +/- 25 or 250 or any other
even number. It only accepts 26 or 251 or 601 as the +/-
(I/E adds one digit instead of 5 or 10. Still works but am
told "you cound like little off freqxy on xmit".

I am 100% disabled. I can not get a job, so I don't have to worry
about a security clearance.

> Your credit rating matters.

In most cases, but not always.

> And I also note that many of those who are bad credit risks deal in
> cash only...because it is the only way others will deal with them.

I got in the habit of paying in cash about 35 years ago when I owned
a business, and my suppliers gave a 1.5% discount for paying cash within
10 days of the monthly statement being mailed. I paid cash for vehicles
whenever possible to save the finance charges. In 54 years I have
financed one new truck, and one home, 30 years ago. I have no need for
credit, because if I can't afford something, I'll do without it. The VA
takes care of all of my medical needs, and everything else is paid for.
I'm getting old and with my health problems I have no idea how long I'll
be around. Its not the big deal it was when I was 20 years old.

> Do you have a credit card? I know it's possible, but it sure seems like a
> pain to live without one these days... especially for things like renting
> cars.

I applied for a credit card in 1972 and was turned down because I
was an E2 in the US Army. You had to be an E6 with five years to
qualify, so I decided I was never going to waste my time applying
again. The credit card companies have probably spent more trying to get
me to apply for a card since them, than I would have used that Chevron
card for.

I really can't travel very far, so I have no need to rent a car. In
fact, my truck was out of commission for over a week before I was able
to crawl under it and cut the damaged exhaust system apart and fix it.
I asked the young man who volunteers for the "Computers for Disabled
Veterans" project get me a few groceries, but otherwise I didn't miss
the truck. He is learning computer repair, in exchange for helping me
finish more computers.

I have always lead a simple lifestyle. Sure there are lots of things
around, but I rarely buy anything new. Only when I can't fix something,
or build it from what I can find. Its very satisfying to look at
something you've built and have someone ask, Wow! Where did you buy
that? :)

I have picked up a couple truckloads of free angle iron bed frames to
build some work carts, but first, I have to build a welding table. I
have a lead on free reject sheets of plywood from a local mill to make
shelving out of. Any sheet that has a splice, or is missing any glue is
rejected. I want to build some shelving to store the spare computer
parts, and wood trays to hold Hard drives, CDROM drives and Floppy

drives. That way they can be sorted, tested, and ready to drop into a computer, as needed.

BTW, I was given another Compaq like yours with the VGA connector sheared off the motherboard. It works with a replacement AGP card, but you know me. I'm going to replace the connector so I can see if the onboard video is still ok. ;-)

I think what people may be thinking about is that ham gear must be Part 15 certified (for the receiver) if it's commercially built, whereas home brew gear need not be.

that is rather bizarre. the only thing i could possibly add would be
to be certain that you reset the processor after the battery was
charged.... perhaps in the loss and restoration of battery backup and
main power up and down, something the uP got scrambled, and is being
very well maintained in the incorrect state by your cool replacment
backup battery.

S 97.315 Type acceptance of external RF power amplifiers.
(a) No more than 1 unit of 1 model of an external RF power amplifier capable of operation below 144 MHz may be constructed or modified during any calendar year by an amateur operator for use at a station without a grant of type acceptance. No amplifier capable of operation below 144 MHz may be constructed or modified by a non-amateur operator without a grant of type acceptance from the FCC.
(b) Any external RF power amplifier or external RF power amplifier kit (see S 2.815 of the FCC Rules), manufactured, imported or modified for use in a station or attached at any station must be type accepted for use in the amateur service in accordance with Subpart J of Part 2 of the FCC Rules. This requirement does not apply if one or more of the following conditions are met:
(1) The amplifier is not capable of operation on frequencies below 144 MHz. For the purpose of this part, an amplifier will be deemed to be incapable of operation below 144 MHz if it is not capable of being easily modified to increase its amplification characteristics below 120 MHz and either:
(i) The mean output power of the amplifier decreases, as frequency decreases from 144 MHz, to a point where 0 dB or less gain is exhibited at 120 MHz; or
(ii) The amplifier is not capable of amplifying signals below 120 MHz even for brief periods without sustaining permanent damage to its amplification circuitry.
(2) The amplifier was manufactured before April 28, 1978, and has been issued a marketing waiver by the FCC, or the amplifier was purchased before April 28, 1978, by an amateur operator for use at that amateur operator's station.
(3) The amplifier was:
(i) Constructed by the licensee, not from an external RF power amplifier kit, for use at the licensee's station; or
(ii) Modified by the licensee for use at the licensee's station.
(4) The amplifier is sold by an amateur operator to another amateur operator or to a dealer.
(5) The amplifier is purchased in used condition by an equipment dealer from an amateur operator and the amplifier is further sold to another amateur operator for use at that operator's station.
(c) A list of type accepted equipment may be inspected at FCC headquarters in Washington, DC or at any FCC field location. Any external RF power amplifier appearing on this list as type accepted for use in the amateur service may be marketed for use in the amateur service.

S 97.317 Standards for type acceptance of external RF power amplifiers.
(a) To receive a grant of type acceptance, the amplifier must satisfy the spurious emission standards of S 97.307(d) or (e) of this Part, as applicable, when the amplifier is:
(1) Operated at its full output power;
(2) Placed in the "standby" or "off" positions, but still connected to the transmitter; and
(3) Driven with at least 50 W mean RF input power (unless higher drive level is specified).
(b) To receive a grant of type acceptance, the amplifier must not be capable of operation on any frequency or frequencies between 24 MHz and 35 MHz. The amplifier will be deemed incapable of such operation if it:
(1) Exhibits no more than 6 dB gain between 24 MHz and 26 MHz and between 28 MHz and 35 MHz. (This gain will be determined by the ratio of the input RF driving signal (mean power measurement) to the mean RF output power of the amplifier); and
(2) Exhibits no amplification (0 dB gain) between 26 MHz and 28 MHz.
(c) Type acceptance may be denied when denial would prevent the use of these amplifiers in services other than the amateur service. The following features will result in dismissal or denial of an application for the type acceptance:
(1) Any accessible wiring which, when altered, would permit operation of the amplifier in a manner contrary to the FCC Rules;
(2) Circuit boards or similar circuitry to facilitate the addition of components to change the amplifier's operating characteristics in a manner contrary to the FCC Rules;
(3) Instructions for operation or modification of the amplifier in a manner contrary to the FCC Rules;
(4) Any internal or external controls or adjustments to facilitate operation of the amplifier in a manner contrary to the FCC Rules;
(5) Any internal RF sensing circuitry or any external switch, the purpose of which is to place the amplifier in the transmit mode;
(6) The incorporation of more gain in the amplifier than is necessary to operate in the amateur service; for purposes of this paragraph, the amplifier must:
(i) Not be capable of achieving designed output power when driven with less than 40 W mean RF input power;
(ii) Not be capable of amplifying the input RF driving signal by more than 15 dB, unless the amplifier has a designed transmitter power of less than 1.5 kW (in such a case, gain must be reduced by the same number of dB as the transmitter power relationship to 1.5 kW; This gain limitation is determined by the ratio of the input RF driving signal to the RF output power of the amplifier where both signals are expressed in peak envelope power or mean power);
(iii) Not exhibit more gain than permitted by paragraph (c)(6)(ii) of this Section when driven by an RF input signal of less than 50 W mean power; and
(iv) Be capable of sustained operation at its designed power level.
(7) Any attenuation in the input of the amplifier which, when removed or modified, would permit the amplifier to function at its designed transmitter power when driven by an RF frequency input signal of less than

50 W mean power; or
(8) Any other features designed to facilitate operation in a telecommunication service other than the Amateur Radio Services, such as the Citizens Band (CB) Radio Service.

True, but Part 15 testing has nothing to do with type acceptance. AND,
amateur radio gear is still required to meet the Part 15 radiation
specifications even if the equipment is homebrew. You don't need to
send it off to a certification lab, but if you're radiating trash out
of band, you're in violation of the law.

I'll say that the broadcast service normally requires type acceptance
on transmitters as well, BUT there's still an exception for homebrew
broadcast gear... your local AM station can put a homebuilt transmitter
on the air as long as it meets the technical specifications and it has
a nameplate on the front stating that it was homebuilt. (The wording
required is quite specific but it's listed in Part 73.)

It still has to meet Part 15 specs (all incident radiation devices
do), it just doesn't have to be certified before you use it.

I had been on ebray since they billed via postal mail and gave $10.00 credit to start

you out.

Recently I had the wonderful experience of having paid my ebay via Payless Pal and when

I went to pay the small bill.. a few bucks. THEY made an 8 cent error in the

bill transfer and so I figured they would just bill it on the next months cycle.

BUT! What they did was to debit a closed bank account.

I had opened a checking account to get a Payless Pal account and closed

it so my real money was never in jeopardy. So what the idiots had done then was

to bill me an additional $15.00 for a bounced debit they should have never made.

In the mean time ebray has gotten so big I could not get any 'Real response from a

Real person' Like dealing with the government! I could find no Phone number to

call and explain THEIR ERROR.

I just kept getting junk Spam replies from ebray.

It makes them feel good telling me I can not use ebray. pftpftpft!

So I have since closed my ebray account.

AND my Payless Pal account a soon as I heard ebray had bought them.

For several months ebray kept billing me with additional "late charges"

HA HA ebray and Payless Pal get stuffed!

All over 8 cents they have lost a lot more than that in business since I am also

disabled and did shop over 100 items on ebray. It WAS convenient to use

and not walk through so many flea markets and hamfests. My rating WAS over 98%

Couldn't please everyone, and some sent me junk from trash cans smell and all . lol

Thanks for the vent.. off my soap box now and shopping elsewheres. :-p

Both radio's are complete with mic,bracket, power cable, and original boxes.
One has a copy of the manual, other has original. These units are in good
condition and work very well.
$300.00 for the pair plus shipping from 19518
I'll only ship to Cont. US. USPS money orders only.
Any questions please email direct.

So you closed a bank account and didn't tell PayPal? This whole mess is
your fault.

eBay is the best. I've bought hundreds of items worth many thousands of
dollars. Most of it could never be found locally for the same price.
Anytime I'm looking to buy *anything*, I look at eBay first.

Mike

Nope... closed account ebray opened with that was used long ago.
Was active via Payless Pal till they made a mess of it all so I closed that
account
so they couldn't rob me just for THEIR 8 cents MISTAKE. Plus their
withdraw
penalty, plus their late fees. UGH!
Had they replied with an 8 cent request there was more than 8 cents in
my Payless pal account at the time. Just as reasonable as the Gvnmt LOL

Just the same as auto deposit from anyplace... they have access to get what
ever they want and you have to litigate it to get your own money back.
Being on SS disab' I'd starve before I got my money back if any were taken.
I never trust them with my whole paycheck.... I wonder why anyone does.
Oh!.... That's so they can get in the news by being e-robbed. Phished etc.

Good luck Y'all

I also keep my Norton AV etc up to date and turned on ALLWAYS

Yeah I left the Unit on for 2 days just to charge the external
BU batteries. But still no retention of settings. I originally
had 3 AAA type celles in the same place outboard so next thing to
try will be use 2 only. Maybe 3 was the cause of the added
digit of "1" on the offsets. Thsese were all lithydride types.
Tnx for response
Joe

That is not correct. If you ask "can I eat a caramel, my reply is you may
(permission) if you can (ability). For all I know you're toothless and have
no ability to chew.

If you correctly ask "may I have a caramel" the correct reply is, "yes, you
may."

Hmm, you think that spelling is a reflection on intelligence? Spelling is a rather arbitrary transliteration of vocal sounds into written text. I have known some incredibly brilliant people that couldn't spell their way out of a wet paper bag, and I have known some extremely facile spellers that couldn't reason their way out of that same bag.

The kids on IRC are using home grown abbreviations to cut down on the number of symbols they need to type to convey a message... Hams do the same thing when using RTTY, or CW.

I am sort of curious as to why my posting of the actual FCC part 97 rules that cover linear amplifiers drew exactly zero comments.

I do... and it's amazing they can communicate at all.

So if everyone under 20 confuses "can" and "may" does this make the misuse of either word correct? Hardly. If a million people do a stupid thing, it's still a stupid thing.

Believe it or not, grammar does have a place in this world. It's the correct means by which we communicate. If we can't communicate correctly, we shouldn't be surprised when things don't go the way we want them.

Just my 2 cents.

From: The Undecided <undecided@boh.com>
Message-ID: <45181cb3$0$47968$4fafbaef@reader3.news.tin.it>
Source record: 7291

Hello,
I'm very undecided between these two rigs, please, could someone who tested both or know them give me a suggestion ?
FT-2000 will be available to buy within a few weeks and I'd like to be convinced to choose it.
Of course I read eham reviews (http://www.eham.net/reviews/detail/5641) and it seems to me that FT could be the best choice.

BTW, this sentence from AD9P is fantastic "Now I could just convince my wife that I need both", I do believe I'll need to do it too ... :))

Thanks for any help.

Luis

Chuck,
you do point out an interesting fact:
in the last 15 years or so, the written language of the internet has come
into its own. it is not unlike English in many respects (American English
is an "evolved" language, much like "net speak").

today's kids know this language well and it does, in fact, convey a lot
of information with a minimum of keystrokes. replacing letter combinations
(the ATE sound) with numbers (like 8) can shorten word lengths while still
sounding the same.

there is already research going on per this subject and several prominent
papers have been presented over the last few years.... it won't be too
long before someone actually engineers an alphabet for the net. that will
be neat to see.

and to think, hams are the ones that actually originated tis concept with
CW starting over 70 years ago.

Wow... someone probably just reefed on a video cable that was still screwed
into the connector and ripped it off?

I would wager that you'll find it will work just fine if you can successfully
re-attach a connector (and repair any damaged traces!)

Hi all,

I am in need of four (4) type VT-4-C / 211A vacuum tubes
for display only. "Dud" tubes would be just fine as long
as they look OK. These will be installed in the BC-375-E
transmitter that is on display in the exhibit hall at our
Museum hangar. That radio will eventually be installed in
the radio compartment of our B-17G Flying Fortress bomber.
I am looking for a donation here, and once again I stress
that I'm NOT looking for good tubes because they are only
for display. We are a 501(c)(3) non-profit aviation museum,
and all donations are tax-deductible. Can someone help us
out with 1, 2, 3, or 4 tubes?

Thanks and 73!

The 211A is in current production by a number of manufacturers, and
the high end audio guys really like them. You might try asking on
rec.audio.high-end if anybody has any pulls. You may be forced to
use Chinese ones, mind you, but that is probably fine.

No damaged traces, but someone covered the exposed terminals with
black electrical tape over the HDE15 knockout. The 15 pins aren't too
hard, but removing the two spring loaded mounting clips is the bear. If
the onboard video is bad, I'll remove it and put one of the old DE-9
filler plates over the hole.

4476. FS 2 Meter Transceivers cheap

Newsgroup: rec.radio.amateur.equipment
Date: 2006-09-26 18:44:29 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <ZxeSg.635$uJ2.193@dukeread03>
Source record: 7312

I have two VHF Transceivers for sale cheap:
1. Icom IC-27H, 2 Meters, 45 Watts, has Mic, Manual, Mobile Mt. Tone Board. This transceiver
looks new and transmits with full output. But the receiver audio is very low. I would guess that the
audio transistor is out. Everything else works great. Price is $55;
2. KDK Model FM-2015R 2 Meters, 15 Watts, Mic, Manual, Looks and works like new. Fixed Tone,
Price is $60. Very little time on both of these radios.
Shipping from 79602 is extra. Thanks, Charlie Hugg, K5MBX

Actually I thought the 11 Meter band was given to CB in 1955 and not 1957. A very mute point indeed.

Well, I sort of thought it might draw a few "Oh, gee, I guess commercially
made ham linears have to be FCC type accepted after all"'s.

The guy making the CB linears fails a whole laundry list of requirements
for type acceptance of a Ham linear.

And because he isn't a ham, he cannot legally build even *one* such unit,
let alone go into production.

That was the Class D citizens band. I believe Class C is also in the 27 MC range, with low bandwidth digital modulation for remote control, etc.

Whatever happened to classes A and B? I recall Class A was AM on the 460 MC band.... took a huge amount of bandwidth both because of the modulation method and the fact the transmitters were generally not very stable...

I don't think anyone except him thinks otherwise.

The thing is... what will the FCC do about it? And are they going to do anything about the touch lamps sold at my local Wal-Mart which spew trash all over the HF band, or the local computer store which has a roll of "FCC Part 15 approved" stickers which they put on uncertified (and often uncompliant) PCs?

Dressler NIB (still sealed in shipping box) $450 shipped ARA100HDX

covers 40 kHz to 100 MHz and is designed for the interception of weak signals even in the presence of strong broadcast station signals. The ARA 100HDX is a alternative for those who do not have the space for a traditional outside wire antenna. It is compact and unobtrusive. The output impedance of the antenna is always 50-75 ohms, independent of frequency. This allows efficient connection directly to the receiver without an additional antenna tuner. The ARA100HDX will not overdrive most portables.

Universal sells for $550

25 years? Probably about the same, since repeaters had been around
at least 10 years by then. You could by a repeater over the counter
with tone squelch, and several other toys built in, so they were no more
complicated than a 2 meter handheld. My high school Amateur radio club
built a two meter repeater of of Motorola and GE strips, homebrew powers
supplies, diplexer, and timers in the late '60s. What is the big deal,
unless you have multiple sites and voting receivers? We were just a
bunch of RF crazy teenagers with less than $50 to spend, and we wanted
to build a repeater. A few months later we were given a surplus WE Touch
TOne decoder module, and added a phone patch.

Like everything else the club did, we raised the funds by repairing
old electronics and selling it to buy the parts we needed for the next
project. the only new piece of equipment we ever purchases was a HW-16,
in kit form. BTW, CW was the least used form of communications from the
club's station. they could do that at home, but we had some nice
antennas, the two meter repeater, and several full coverage HF rigs.

I have just posted some pics to alt.binaries.picture.radio of the De Forest Crosley 1722 radio I picked up yesterday. The cabinet has a couple of minor veneer issues but the underside of the chassis is where the work will be.

Anyone have any info on this?

I have the info I could find on the net, blurry schematics, but would like a cleaner scan if available.

Thanks
Brian

4555. ICOM HM56 Capacitor replacement

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-01 19:35:56 UTC
From: Ken Roser <kroser@pobox.com>
Message-ID: <xMUTg.25$KL.16@newsfe12.lga>
Source record: 7241

Apparently there exists a problem with the HM56 microphone that causes the radio to key up spontaneously due to capacitor failures on this microphone.

Can anyone provide some assistance on the details of this procedure. Supposedly there are 5 surface mount capacitors that need replacement.

FS AEA KT-3 Keyer/Trainer with manual Good condition, actually works!

$40 shipped (USPS) in US. I take Paypal.

FS Kenwood TR-2200A (AKA DRAKE TR-22) 2 meter portable transceiver!
Loaded with crystals, this unit actually works and the pilot lamp works
as well. Includes original mike and telescoping antenna in good shape.
The case is a bit rough but with proper cleaning and olive drab paint
shoul look quite presentable. Someone wired a permanent DC cable to it,
but should be able to restore to original battery power.

$45 shipped (USPS) in US. I accept Paypal.

http://www.rigpix.com/kenwood/tr2200a.htm

FS: GMRS - SECURENET MOTOROLA PORTABLE REPEATER STUFF GMRS /\/\()-|-()!

OK what I have to sell is the following

Genuine Motorola MX-300 Channel Elements _New Old Stock_ for GMRS
Repeater Station pair 462.575 TX and 467.575 MHz RX. The TX element
works with the 24.4 MHz offset element (included) required for use in
the Motorola P44SYS3180B Securenet Portable Repeater. But Wait, there
is more:

Included is a carton of clean MX-300 parts, some new, consisting of
several 440-470 MHz band radios, enough to build the RF decks for a
complete repeater and have spare parts left over.

These are all for the 440-470 MHz band. model P44sys3180b. If you have
a 406-420 MHz model with my parts you can convert the 406-420 model to
440-470 MHz pretty much by just plugging in a few RF modules. Or,
provide your own box and controller and you can build your own repeater!

Price $99 shipped USPS to US I accept PayPal.

I will provide a service manual for the Securenet P44sys3180b repeater
for an additional $10 to the buyer of these items.

FS LGC Wireless AMPS Fiberoptic/CAT5 BDA RF Remote Antenna Unit DAS8A-4

If you know what this is, you might want a spare. This is the small
stylish white RF box that goes at the reradiating antenna. Has a CAT5
connector on one end and an SMA on the other..

$35 Shipped in US via USPS. I accept Paypal!

FS Tiny AMPS phone Ericsson AF738

Good condition

Sorry no battery.

$14 shipped via USPS in US. I accept PayPal

FS Realistic TRC-465 AM/SSB CB Radio. Excellent physical and electrical
condition, in the original box with all acessories. Plus service manual.
Lightly used, this is unmodified and clean unit without any appearance
of wear. I am including a LARSEN NMO-27 black base loading coil (missing
the ~42" whip).

$59 Shipping included via USPS. I accept Paypal.

For Sale: HP3586B Frequency selective level meter VLF receiver

Description :

HP 3586B Selective Level Meter 3586B: Meets North American Bell
requirements, 50Hz to 32.5MHz frequency range with 75ohm unbalanced
signal input, 4kHz to 1MHz frequency range with 124ohm balanced signal
input, 4kHz to 1MHz frequency range with 135ohm balanced Input

This unit has the high stability oscillator and is excellent condition.
No dents, no scratches, and no dust inside whatsoever. I believe it was
rack mounted at an environmentally controlled site and
seldom used. I don't have the feet and the small blank panels (where
the rack ears normally go) but these are common size. This unit works
fantastic and has a new NICAD memory battery installed. I replaced one
of the jacks in front with a BNC (easily reversed mod that screwed in).
I also put a nice black anodized aluminum spinner knob on the VFO shaft
encoder for ease of tuning. It makes for a very sensitive VLF
receiver and can measure extremely low levels with great accuracy. By
the way, the RF output jack on rear enables you to sweep filters etc.

The service manual is included._

$495 plus shipping from central florida

For Sale AN/GRR-24 Receiver UHF 243 MHz Guard Receiver

Untested (no ac cord), appears complete, case has wear.

$75 plus shipping

For Sale: M2 2MCP22 Circularly Polarized Satellite, EME, DX Antenna

12.25 dBc

I bought this with intent to re-install my satellite station. However I
don't need the 22 element model as the 18'7" boom is a bit much for my
location.

This antenna is spec'd from 144 to 148 MHz 1.4:1 VSWR and so will be
good for all modes of operation in 2 meter band. M2 makes a fine antenna
(list price $305 new) and is very easy to deal with. Since this item is
used and is assembled, it is for pick up only in the 32765 central
Florida area. You can transport it with an SUV or minivan as the boom
has been disassembled into three sections approx 7 feet long.

Price $100. Pick up in 32765

For Sale: APCOR Whitebox UHF MEDCOM Telemetry Radio

For sale $55 plus shipping.

Help me clean out my garage! This unit appears to be in fine condition
and inside appears to be clean and untouched. If you check my last
posting, I am selling some other similar Motorola MX-300 components
which include MX-300 Channel Elements _New Old Stock_ for GMRS Repeater
Station pair 462.575 TX and 467.575 MHz RX . So if you are real handy,
you could convert this to a GMRS repeater.

For Sale: Matheson model 8065 Freon leak hunter.
For CO2, Helium and R12 gas leak detection. I haven't tried with R134
but suspect it will work. This is a
lab grade detector that runs off AA batteries. It is like a large gun
and has an internal fan to pull the gas into the probe. Condition is
like new $185 Shipped in US

A friend of mine has an ABE L60/TH, 60W p.s. UHF band (470 to 860 MHz)
amplifier, with a 3 cavity and a 6 cavity 500W tuneable filters also
supplied by ABE. All in mint condition. The part numbers are:

L60/TH/U/Ch 68 amplifier

L60/TH/U/Ch 68 STD I bandpass
L60/TH/U/Ch 68 STD I notch

The two filters are mounted on a 1U 19 inch rack mount, also mint.
He has asked me to sell them, any offers before they go on ebay?
Cheers,
Terry

Ken-

This is the first I've heard that someone had solved the problem, which is apparently common. Mine keys the transmitter when power is first applied. After several seconds, the transmitter unkeys and everything is OK until powered down. Replacing the CMOS battery didn't help.

Somewhere I found a copy of the HM-56A diagram and parts list, possibly at www.mods.dk. I suspected that a transistor connected to the CPU's reset line was leaking and slowing down the power-on reset. I had not considered capacitor leakage as a possible cause.

Please post if you learn more.

>Thanks - Roger

The board is not that hard. YES there will be cables you will need to disconnect. Have your digital camera handy or just a paper and pencil and make a quick sketch of the board I used to do that before the camera says and sometimes its still easier than photos. When disconnecting multi pin connectors, pick on end and mark the wire color so you will get the connector reinstalled correctly.

I think one coax gets disconnected that goes through the from of the 735. There is an other or so too that you will see get tight as you try to life the board so disconnect it too. Just don't get then confused, maybe take a moment and mark them with masking tape.

Basically you will unscrew to board. Now with the front of the radio towards you gently lift the front of the circuit board. " walk " the board towards the front lifting it above the front of the radio.

You are working towards getting the rear connectors out of the back panel and clear of the rear lip. PAY attention to any cables that need removing and do so as you go.

Once the rear connectors are clear of the rear chassis lip you can then flip the back edge of the circuit board up and over to get to the

diode solder joints.

Its really easier than this write up sounds. I have talked several through it over the telephone as you need to do the same thing to install the CW filter.

Over the years many have tried substituting those diode, even to installing pin diodes. While I was at Icom tried them at Icom and found no performance enhancement. We had one person remove and replace his band pass filter diodes with pin type and we could not fix that rig. We even installed original diodes back into it. It was an IC-751.

Call Icom's parts department for the diodes. Another source of Japanese parts used to be MCM audio

Source record: 7100

Here's the details. ICOM has a service bulletin that describes the problem and fix. You'll need to replace 5 surface mount capacitors. I ordered the parts from ICOM and the total cost is about $8. A link to the bulletin is http://www.icomamerica.com/support/kb/Article.aspx?Download=180

The text of the bulletin is reproduced below:

"HM56/56A - Electrolytic Capacitor replacement

A common failure of the HM56/56A microphone, causing the radio to remain in TX mode when the mic is connected, is failure of the electrolytic capacitors on the microphone circuit board. Generally, replacing all 5 capacitors on the board repairs the problem and allows the microphone to work properly again. This repair is not a guarantee, simply a common failure point and reference for repair.

The 5 capacitors on the board are labeled as C3, C4, C7, C13 and C14. They can be ordered from the Icom parts department using the following part numbers:"

(see the bulletin for a photograph and parts list)

Thanks Gary for taking the time to write a detailed response. It sure helps when someone who has done it before offers tips and encouragement. Good to hear that Icom still has the parts.

Interesting about the PIN diodes. I was reading some of the old posts about this subject and there was some debate about whether it worked but no one had done any tests to confirm it one way or another.

73 - Roger

I see I had a few misspellings. I meant camera days not says...
I remember one coaxial cable that runs from top to bottom through the
space between the chassis and front of the radio. I seem to remember
you will need to disconnect that cable.

I am not exactly sure if Icom still has those diodes but they were
used in quite a number of radios. I am sure if they don't someone
there will have a replacement recommendation.

You are correct the results were very mixed replacing the PN junction
diodes with pin diodes even though the pin diodes are better for RF
switching.

Some swear by the pin diodes and others don't. We could not see a
difference and the pin diodes are quite expensive. test gear did not
show any real difference, on the air testing was questionable with two
radio side by side on the same antenna.

Just give your self a couple of hours to do the job. It likely will not take that long but you will not be rushed.

Bought radio with blown final which I repalaced with same gain color dot . You can key the transmitter on ssb as soon as you talk off it goes into never never land . tried changing the 1000 uf cap at the b+ input no help. I don't know what stage is talking off. the tools at hand are a 35 mhz scope and a freq counter and of course a dmm with cap checker.

I have an idea. This should thin the ranks of amateurs and let Big Brother have the bands as is desired. We all know the FCC wants to sell the bands to the highest bidder. In addition to the code requirement, lets have proficiency testing in SSB, FM, RTTY, PSK-31 and Packet. That should just about kill the code proponents off, as they are mostly too old, addled, and unable to learn. That way, even they won't be able to use *their* bands without these proficiencies.

Sounds like a plan, eh?

And just who do you think developed these modes? How new do you think these
modes are? It seems like everyone I contact on the "new" mode of PSK31 is
retired and has been for many years.

sample check Dee: how many people that you contact on ANY mode are not
retired and have been for years

went to our Radio meeting tues night and a talk was given on the "New"
mode PSK-31

if your sample is skewed towrd retirees as badly as mine........

I could go for that.

The more testing, the better. Then outsiders would look at the amateur
radio service and see valuable and capable operators, they would see our
spectrum wasn't being wasted by people that only know how to talk into a
microphone to communicate.

Thanks. :-) Great idea.

If you have a European or Italian version press and hold the " TONE "
button on the mic for 1 to 2 seconds every time when you transmit.
This is shown on Page 20 of the IC-3220 manual.

If you have a US version then the 1750 Hz is not available, but
nothing stopping you from building up a small tone generator for that
purpose.

SolderSmoke!
A SHOW FOR ELECTRONICS HOMEBREWERS!

http://www.soldersmoke.com

Listen at: http://www.soldersmoke.com

SolderSmoke #34 (October 7, 2006) is now available
on http://www.soldersmoke.com

Ashhar Farhan joined us from India for #34:

-- BITX-20 transceiver.
-- HB in India.
-- EMRFD.
-- W7ZOI influence.
-- Hans Summers.
-- Quadrature rigs.
-- DSB and PSK31.
-- Homebrew test gear.
-- The importance of measurement
-- Farhan's 'scope.
-- Homebrew heartaches.
-- Homebrew spirit.
-- Symmetry.

Tired of listening to Led Zepplin or NPR on your
I-Pod? Wouldn't you like to be able to carry with
you the kinds of ham radio conversations that you
listen to while in your radio shack?
Mike, KL7R, in Juneau, Alaska, and Bill, M0HBR, in
London, England meet regularly on the ECHOLINK system
to discuss their homebrew radio projects. We are
making them available as PODCASTS.

RSS FEED: You can subscribe to the program, have
them downloaded to your MP-3 player, and listen to
them at your convenience. To subscribe, just cut and
paste this URL into your I-poder (or similar)
software.
http://www.soldersmoke.com/soldersmoke.rss

If you don't have an MP3 player you can just go to the
site below and listen to the latest program (and
earlier editions) using the audio software on your

computer.

http://www.soldersmoke.com

All our programs are available here.

We hope you enjoy the program. Please send us feedback.

Hi,

I've been looking (without success) for a service manual or schematics
for a Systron-Donner / Datapulse 400 Function Generator.

If anyone has these or could scan at least the sine-shaping circuit
(which in mine has gone faulty) or point me in the right direction of
where I could obtain this information I'd be most grateful.

Thanks in advance,

Ian Holland

Hi
1SS53 are just switching diodes, nothing special. You can replace them with
any 1N914 or other fast silicon small current switch diode.
Greetings

Good riddance! Both John and Karl whose bellicose, fragile

egos contributed to the ruin of QRP-L by chasing off brilliant

contributing engineers and operators then ultimately forced the

exile of QRP-L from its home on listserv.lehigh.edu . Cheers to

QRP-ARCI with exercising their Freedom of Disassociation

and dumping Beavis-n-Butthead!

02 462.5625 462.5625 GMRS Simplex

03 462.5750 462.5750 GMRS Simplex

04 462.5875 462.5875 GMRS Simplex

05 462.6000 462.6000 GMRS Simplex

06 462.6125 462.6125 GMRS Simplex

07 462.6250 462.6250 GMRS Simplex

08 462.6375 462.6375 GMRS Simplex

09 462.6500 462.6500 GMRS Simplex

10 462.6625 462.6625 GMRS Simplex

11 462.6750 462.6750 GMRS Simplex

12 462.6875 462.6875 GMRS Simplex

13 462.7000 462.7000 GMRS Simplex

14 462.7125 462.7125 GMRS Simplex

15 462.7250 462.7250 GMRS Simplex

16 467.7250 462.7250 GMRS Offset

Tested - guaranteed to work.. May have some light scuffing or some numbers either scribed into the case or black marker on the case. Battery, charger and antenna are not included. We tested them with our antenna and battery.

This unit using identical antenna as Motorola MT 1000/P200.

We do have chargers available for these units in different auction.

Payment accepted by Money-order, VISA/MC/Discover by Paypal.

Winning bidder to add shipping/handling/insurance to the US/Canada stated below.

No local pick ups please.

Other destinations based on additional cost.

Please check out our other auctions and save on additional shipping.

Thank you for your interest and good luck bidding!

Canadians: GST/PST is included in the bid price - no extra taxes to pay!

And this isn't a buy and sell newsgroup either, and again, even if
it was, what you are selling is not amateur radio equipment, which
this newsgorup is about.

To make those two stupid mistakes worse, you don't even know that
you shouldn't be posting the same message separately to different
newsgroups. If you really had to spam the newsgroups (and it is
far better to find the most appropriate newsgroup, but given you
are hitting irrelevant newsgroups to begin with, I imagine finding
the appropriate newsgroup is beyond your mental capacity), you
do it by crossposting to the newsgroups with a single message.

Hello Are you interested in the New digital capable Icom IC91 AD? What about D-Star?
If so Come join us at the New more laid back IC-91AD Yahoo group.
We are just starting out so come join us and watch us grow.
The reason for this group is simple. I have vast experience in the area of owning and moderating newsgroup type lists. The other groups devoted to this radio have gone nowhere. I am serious about making this THE group. we already have files for modding the radio the manual and other files are available for the asking.
This group will have a laid back approach.
occasional Jokes are allowed.
Anyway I will add the 91AD to the list of groups that I own and hopefully this will become the single point of interest for this incredible digital capable radio.

4638. Installation in a Ford E450

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-12 03:30:27 UTC
From: Ed <Huckleberry_REMOVE_@bigvalley.net>
Message-ID: <Xns9859D0CC1DB4Bspectrumhogstarbandn@198.186.192.196>
Source record: 7173

I have a motorhome on a Ford E450 chassis. I wish to install a mobile radio in the cab area, and run the DC wiring through the firewall, to the battery. Preferable, the wiring will go through on the driver's side.... it does seem a lot less congested there.

My question: has anyone done installations on such a vehicle? Can you suggest a good location to run a pair of #14 wires through the firewall? ANy ready made access or do I need to drill?

Ed K7AAT

When I need to get through the Firewall on a vehical I usually go
through the rubber collar around the steering column.

Combine this radio with any ol' 11 Meter antenna and listen to the
world come alive! This popular Model 3837 Sears Roadtalker Transceiver

has the built-in AC power supply for plug'n'play base operation as well

as the 13.8VDC option. Extremely nice condition rig that ranges from
28.300 to 28.745 MHz with clarifier that works in both transmit and
receive modes. 25 watt PEP input power and digital display.
Includes original microphone, owner's manual, AC and DC power cords,
mounting bracket and conversion data.
Hard to imagine more enjoyable entertainment for the dollar during long

winter days and nights. $75 PayPal or Postal Money Order plus 13#
shipping via your choice of UPS or USPS from 75605.

Yes, have done that too.... but this vehicle has no rubber collar around steering mechanism or even the wiring harness pass through. Thanks for input, though.

* Ham KH6JF AARS/MARS ABM6JF QCWA WW2 VET WD RADIO SYSTEM*
* Army MARS PRECEDED by AARS (Army Amateur Radio System) *
* Hi State ARMY MARS COORDINATOR *
**********************************************************

Subject: FYI---New freqs etc
Parts/Attachments:
---------------------------------------
ARRL Bulletin 19 ARLB019
>From ARRL Headquarters
Newington CT October 12, 2006
To all radio amateurs
SB QST ARL ARLB019
ARLB019 FCC releases long-awaited ''Omnibus'' Amateur Radio Report and
Order
Ending a protracted waiting period, the FCC's Report and Order in
the so-called ''Omnibus'' Amateur Radio proceeding, WT Docket 04-140,
was adopted October 4 and released October 10, 2006. In it, the FCC
adopted nearly all of the proposed changes in the Notice of Proposed
Rulemaking released back in 2004. The FCC has:
+ expanded the phone subbands in the 75 and 40 meter bands;
+ permitted auxiliary stations to transmit on portions of the 2
meter band;
permitted the use of spread spectrum on 222-225 MHz;
+ permitted amateurs to retransmit communications from the
International Space Station;
+ permitted amateur licensees to designate a specific Amateur Radio
club to receive their call sign in memoriam;
+ prohibited an applicant from filing more than one application for
a specific vanity call sign;
eliminated certain restrictions on equipment manufacturers;
permitted Amateur Radio stations in Alaska and surrounding waters
more flexibility in providing emergency communications;
clarified that ''amateur stations may, at all times and on all
frequencies authorized to the control operator, make transmissions
necessary to meet essential communication needs and to facilitate
relief actions'';
deleted the frequency bands and segments specified for RACES
stations;
and
deleted the requirement for public announcement of test locations
and times.
In addition, the FCC took several other miscellaneous actions.
```

In ''refarming'' the frequencies currently authorized to Novice and Technician Plus licensees, the Commission increased the voice * 90%segments from General, Advanced and Amateur Extra licensees.
On 75 meters, Generals will be able to use voice from 3800-4000 kHz, an increase of 50 kHz. Advanced class licensees will be able to use voice from 3700-4000, an increase of 75 kHz, and Amateur Extras will be able to use voice from 3600 to 4000 kHz, a generous increase of 150 kHz.

On 40 meters, Advanced and Extra Class licensees will be able to use voice from 7125-7300 kHz, an increase of 25 kHz. General class licensees will be able to use voice on 7175-7300 kHz, an increase of 50 kHz.

On 15 meters, General class operators will have phone privileges on 21275-21450 kHz, an increase of 25 kHz.
ARRL President Joel Harrison, W5ZN, expressed the ARRL's gratitude to the FCC Commissioners in a letter dated October 11: ''On behalf of the ARRL and the Commission's licensees in the Amateur Radio Service I want to express appreciation for your release yesterday of the Report and Order in WT Docket 04-140 (FCC 06-149) amending Part 97 ENDof the Commission's Rules. The Commission's action in clearing this pending proceeding will assist the Amateur Radio Service in meeting its objectives, particularly with regard to providing emergency and public service communications.''
The changes will go into effect 30 days after the R&O is published in the Federal Register.
(courtesy of KH6JF if anyone on this group is interested)

That's what has always cracked me up about CB WADIO cops. Why do they
attack others on the internet when they should be cleaning up the 11 meter
airwaves in their home towns. What a bunch of Loons.

In my 1999 Winnie (it may be an F-350) the cigarette lighter and the
Diagnostic plug are alone on a 20 amp fuse. You might want to just
pick up that circuit if you are under 20 amps.

My E450 (not F) has an additional cig lighter type socket a few inches above the cig lighter socket on the dash. I would much prefer to wire directly to the battery, but will consider your suggestion if I can not find a decent way to route wire to the engine compartment. Thanks.

There is usually enough room alongside where the wiring harness passes through the firewall, also alongside where the heater/air goes through. On some Ford trucks there was a rubber plug in the floor behind the drivers seat. Also if you have an on-the-floor shifter, that's also a good spot to pass a pair of wires. If you have to drill, do it if possible on the side kick panels, then route the wires into the engine compartment from the wheel wells...

• 2.815 External radio frequency power amplifiers.

* * * * *

(b) No person shall manufacture, sell or lease, offer for sale or lease (including advertising for sale or lease) or import, ship or distribute for the purpose of selling or leasing or offering for sale or lease, any external radio frequency power amplifier capable of operation on any frequency or frequencies below 144 MHz unless the amplifier has received a grant of certification in accordance with subpart J of this part and other relevant parts of this chapter. These amplifiers shall comply with the following:

(1) The external radio frequency power amplifier shall not be capable of amplification in the frequency band 26-28 MHz.

(2) The amplifier shall not be capable of easy modification to permit its use as an amplifier in the frequency band 26-28 MHz.

(3) No more than 10 external radio frequency power amplifiers may be constructed for evaluation purposes in preparation for the submission of an

application for a grant of certification.

(4) If the external radio frequency power amplifier is intended for operation in the Amateur Radio Service under Part 97 of this Part, the requirements of Sections 97.315 and 97.317 of this chapter shall be met.

Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Probably a long shot, but if anyone is interested in swapping
my Drake T4-X for your Halli SX-117, please contact me
directly.

The Drake comes with the power supply/speaker (MX-5?).
It is being offered as found, and will almost certainly need
to be re-capped. Front panel cosmetics are good. The radio
will need a good cleaning....lots of dust on the top of
the chassis. The cabinet top shows wear and will need
to be repainted to be nice. Under the chassis, its pristene
and not modified or hacked in any way.

Looking for an SX-117 in good to excellent cosmetic
condition. Must be complete and restorable to original
operating condition with NO hacks.

If interested, contact me soon. Once I start working on
the Drake I'll probably keep it and look for an R4.

Steve

For auction, 3 Radius M216's. 1-25 watt, 2-45 watt.
Starting bid is $1.00

25 watt
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&ih=014&item=330039604862&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

45 watt
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&ih=014&item=330039605643&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

45 watt
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&ih=014&item=330039606701&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

These just came out of service and work just fine. They will do the 2 meter
Amateur band.

Unless memory fails me, those units will do 2M fine.... but just above
146.000 MHz.

They are excellent rigs, though. I've had several on 2M and 440 in the
past.

They will program below 146.00 by pressing the SHIFT key when entering the numbers for the frequency. You enter 145.1700 as !$%.!&)) and save this information. The correct frequency shows in the data field once it has been entered. You will get a warning about the radio needing to be recalibrated, but it will work below 146.00.

Hi,

I have an ICOM IC-746 with backlight lamp damaged (the famous
transistors talked on the web are good).

I need to get the Fluorescent lamp from the LCD, or even the LCD (if it
has the lamp) to repair my radio.

If you have one please tell me.

Best regards,

Luis Fernandes

Just purchased a new Yaesu FT-897D (HF/UHF/VHF) rig - had it only 3 days (received it 10-13-06) -- it's a super radio but not for me...I'm used to the bigger rigs with large displays and not so menu driven.

Will trade for Xlnt or Mint condition Yaesu 1000MP, Yaesu FT-990, FT-980 or similar, plus cash. No issues and prefer with filters.

Serious offers only - shipping to 63116 or I'll pick up if reasonable distance.

Thanks.

John

Hi all,
I am new to the group. I have tried to search the group in hope of finding my question but no such luck. I have a qustion. Does anyone know if this charger will analyze a single AA battery? I had also planned on charging up some ht battery packs with it as well as a 13.2v cordless drill battery with it as well. I will be using it to mostly charge batterys and occasinally anaylze them as well. Like i say my main batts that I use are AA batterys. I have been looking at this model but I just not so sure on it. Also would the Trition JR charge and discharge and analyze a single AA battery? As well as analyze a 13.2v drill battery? Would would you guys recommend?

Thanks,
Joe

4690. Maha MH-C777Plus Charger Question

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-19 06:35:42 UTC
From: Ed <zzz@fast.net>
Message-ID: <45371ba0$0$2540$cc2e38e6@news.uslec.net>
Source record: 7076

Hi Joe:

Maha MH-C777Plus II

Supports Ni Cad, Ni Metal Hydride, and Lithium Ion/Polymer chemistries only!

Using Ni chemistries of 1.2v/cell or more (AA, AAA, C, or D or equiv.
rechargeable battery pacs or cells)

Charge + Trickle function: 1 to 12 cells in series. [1.2v to 14.4v]

Also Analyzes (Discharge and hold function only) 3 or more cells only
(No 1.2/2.4v cells alone)

Also Conditions (Discharge + Charge + Trickle function) 3 or more cells
only. (No 1.2/2.4v cells alone)

For the analyzing function, it need a minimum of 3 cells to determine
battery quality. I.E., Good, Shorted, Leaky, Reversed Polarity w/in a
cell, etc.

You cannot do the discharge function if a battery pac has internal
protection diodes, but you can do the charge!

If charging an expensive Ni battery pac for the first time, do monitor
the total output in Ma/Hr, especially during the 90% to 115% period of
rated capacity for excessive heat buildup.

Note: the first charging cycle on brand new batteries is likely to not
fully charge the battery. Subsequent charging cycles will be more
uniform and approach full at ~115% of rated capacity.

Although the charger monitors delta T & delta -V, the cell covering
construction, cardboard, film or plastic pkg can fool the T sensor.

Avoid charging cells w/ low factory capacities, like 400Ma/Hr or less!
Avoid mixing batteries or those w/ different histories!

Long term trickle charging Ni-Cads will build-up internal xtal size,
resistance and subsequent "memory". Use the Re-condition cycle on such
Ni-Cads every 2 months or so.

I recommend this unit for techies who have time to learn the technology
and monitor this Maha with its fast advanced charging cycle. [800Ma +/-
50 for Ni chemistry]

Hope this helps.
Bye.
Ed.

Hello. I am in desperate need of the glass frequency dial for an SX-62. My sweetheart was thrilled to inherit a very nice SX-62B but the frequency scale was subsequently broken in transit. She was VERY disheartened. I was too. If you have an SX-62 parts unit with a good inner frequency scale glass, please reply ONLY directly to denis.sharon [at] att.net, not to the list. Thanks. ICOM Delta 100 questions

I would like to hear from anyone on the board having experience with
these. I have one I have been meaning to install and have some questions;

1. Control language between digital microphone and control head. I would
like to emulate with a PIC and make two bands track each other for
satellite work.

2. Band expansion mods for Japan market radio. I have a "mod from a
Japanese site but haven't tried it.

There's a manual for the IM2410 counter here:
http://bama.edebris.com/manuals/heath/im2410/

It's probably worth a look.

I failed to mention that the IM-2400 is a handheld about the size of a large
TV remote. It looks like it may have had nicads in it they're missing and
all I see a red wire with no connector dangling, no ground but I think I
could use the grond of the PC board. So I need to know the voltage. BTW
the BAMA site has a desk model, AC powered.
tnx

Hi...

I have one... the back panel says:

(quote)

EIA-416

Five - 1.2v ni-cad batteries
(heath co. part no. 418-32)

CAUTION: operational hazard may exist
if any battery charger other than the model
specified in the manual is used

(end quote)

Take care.

Ken

Hi Henry...

Not a problem, I'll trade you ages :)

Should have mentioned that the manual will still be around here,
so if you'd like any pages scanned just let me know.

Take care.

Ken

4722. FS Estate Items

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-23 15:48:57 UTC

Message-ID: <yv5%g.4869$uJ2.1103@dukeread03>
Source record: 7008

I have for sale the fellowing items from a couple of estates. Most of the
gear has been stored for several years.
1. A nice TenTec Century/21 Transceiver. It works and looks almost new, but
the PTO is stuck. Needs PTO servicing. It has been stored for over 10
years.
Receivers well; Full output. Price$145.
2. Atlas 210X nice shape, works. Price $175.
3. Azden PCS-4000 2 Meter Mobile Transceiver with mobile mount. Looks great,
but needs work. No transmit. Has mic and manual. Price $40.
4. Tokyo Hy-Power UHF HT, Model HT-7, Micro FM Transceiver/Micro 7. NIB, but
no batteries. $35.
5. Pace Communicator MX, 2 Meter HT with manual, needs batteries, $25.
6. Cushcraft Ringo Ranger II, Model ARX-2B, 2 Meter base antenna, $40.
All item plus shipping from 79602.
Thanks, Charlie Hugg, K5MBX

4723. kenwood 450s problem.

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-23 23:52:29 UTC
From: Ian Smith <rapids@cogeco.ca>
Message-ID: <ZAc%g.122052$ED.7349@read2.cgocable.net>
Source record: 7009

Hi,
I seem to have a problem with my kenwood 450s. I can transmit fine on
80 and 40 meters but when I go to 20 nothing plus there is what sounds
like an echo when I try to transmit. The antenna tuner says the SWR is Ok.
I use a G5RV antenna and thought that this may be the problem. I have
just installed an "ENDFEDZ" 20m end fed dipole, the results are the
same. I can receive OK and there is no difference on the transmit side
when I bypass the tuner and connect either antenna directly to the
radio. Any help / suggestions would be gratefully appreciated.

Many thanks
Ian

Wanted;

A 100 watt (minimum) VHF rig to be used with Packet, specifically,
APRS on 144.39 MHz, so rock bound (crystal control) okay.

TIA

Source record: 7019

Hi,

Like everyone, I've a number of mobile phones which I don't use anymore. I was thinking I could make use of those rechargeable batteries which are going to waste. How do I put them to use in small devices like portable radios, toys. They seem to have 3 battery terminals -
how do I wire them ? What is the voltage ? How to ensure that I don't blow my radio up ?

Thanks in advance for your inputs,

Mike Tan

4734. Am transmitter - vlsi project

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-26 16:54:15 UTC
From: hananl <hlepek@gmail.com>

Source record: 7020

Hi,
I need to design an AM transmitter as a vlsi project (it needs to be
located on smart dust later on).
Does anyone have any good suggestions were to start from? I am familiar
with vlsi, but don't really know how to implement such a big idea, into
a vlsi simulation and circuit design.
Looking on trasmitter's schemes didn't help, 'cause that's all
resistors, amplifiers and capacitors. How do I translate it into vlsi
design?
Be very glad to any guidance...
Thanks.

Hi Mike, be very careful with that type of battery.
Charging them should be done with the charger meant for them (one
battery at a time).
Lithium Ion batteries are great but If charged wrongly they can explode!!!!
With a lot of force!!!!
Good luck and 73

JJ

Ok, I am a traditionalist, sorry.

5wpm should not be an impediment to anyone with normal faculties and
normal physical dexterity.
I could do 5 wpm at 7 or 8 and I did not know a ham operator...my dad
taught me after he came home from Army as Radio op. Never used it for
15 or so years.

At 25 I took a novice class (finally) and was doing over 20wpm in 2-3
weeks.

For anything above the entry license, a code increase would be
warranted to operate in the best cw bands, maybe.

When I took my General, Advanced, and Extra I had to do it at the FCC
office and took and sent code from the Director, Detroit office. Talk
about nervous!
I dont think you can compare the V.E.C. experience (as good a job as
they do) with that for excitement and stress.
When you came out of the MCNamara Bldg in Detroit, you knew you had
taken a test. You knew you had earned your ticket!

No, I would not stay on C.B.......as good a service as it is, it cannot
compare with the people of Ham Radio.

4746. Importing Tokyo HyPower HF Amps to USA

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-28 12:59:23 UTC
From: "C. J. Clegg" <reply.in.group@nospam.no>
Message-ID: <pan.2006.10.28.12.59.21.216939@nospam.no>
Source record: 7032

I have finally had enough of waiting forever for the FCC to get rid of their kill-a-fly-with-a-sledgehammer approach to HF amp regulation, so that I can get an amp for legal use with my FT-817.

Have any of you had any problems getting a Tokyo Hy-Power QRP amplifier past the border watchdogs and into the USA?

I try to be law-abiding but I'm tired of the FCC's inability to enforce the rules against the few, so they penalize everybody. I'd just like to get a reasonable power level out of the FT-817, for times when 5W isn't enough, and for legal use on legal ham bands with my legal Extra-class license.

Thanks...

The big issue is that unless you have the technical skills for repair (Extra
Class amateur and the GROL no longer have that meaning) -- you have to send
the Tokyo-HyPower ampfliers back to Japan for repair / service.
I have seen at least 5 units over past 2 years that the poor OM, complains
he does not have the $$ to send it back to Japan for repair --
so he begs me for a few $$ to take it or repair it or scrap it for parts so
he can then buy an MFJ or something else -- he can fix himself for get fixed
in USA.

Comments have been made by Tokyo HyPower earlier this year that they will
have a US distributor in near future.
FCC's recent Report and Order (R&O) in WT Docket 04-140 seems to move in
this same direction (HF amp regulation relaxation) -
BUT not for "dirty" RF amplifiers (such as the RM Italy products and Palomar
clones on eBay).

BTW, the HF Projects group has been building 50 watt "shoes" for the QRP
transceivers for a few years --
and now has the HF SuperPacker Pro 100W Amplifier 7x5.5x3 inch, 3 lb
footprint
http://groups.yahoo.com/group/hfprojects/

Why don;t you "get on the US build band wagon" of building your own
amplifier (with your fellow US amateurs in a group) --
then you can actually repair that amplifier -- when you have a problem --
and save some $$$ and time

serial number 2 was just finished by a builder on October 2nd.
http://www.hfprojects.com/hfprojects/

Better yet, here is the actual posting from the serial number 2 builder:

I was a co-author on the original HF SuperPacker article in Dec 2005 QST (along with Jonathan, WA3WDK). Jonathan and I consulted with Virgil as he designed the SuperPacker Pro. I worked on one of the prototypes and did some debugging of serial number 1.

Thus, it is not a surprise that I was able to successfully build the SuperPacker Pro. On the other hand, this project required no debugging. It worked for me the first time I powered it up.

I am happy to answer any questions about the build. If you post to this group also send me a copy by email. Find my email address on QRZ.com.

I hope everyone who builds the SuperPacker Pro has as much fun as I did. For sure, you will have a great little 100 watt (13 db gain) amp!

4749. Response to SC

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-28 15:21:16 UTC
From: Roadrunner NNTP <noone@nowhere.com>
Message-ID: <MzK0h.33021$ta3.31232@tornado.texas.rr.com>
Source record: 7035
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.amateur.homebrew,rec.radio.amateur.antenna

I've had enough of SC in newsgroups!

Please don't answer his flaming posts. I would like for my 14 amateur radio operator girl child (who is working on her code) to be able to use newsgroups without this abuse. We should not have to put up with it either.

Copy and forward the following to abuse@earthlink.net. They should be able to identify him from the headers and their logs.

Dear Earthlink Abuse . . .

Please get this clown off of usenet. There are several hobby groups where he posts regularly his inflammatory material, often with profanities. Our kids who are in the hobby certainly don't need to be exposed to this stuff.

Thanks.

Long time internet user and parent.

And if they fail the code test they get zapped again.

Bringing back 'spark' will be good for ham radio.

5wpm ain't really learning it. I can fart 5 wpm.

Lets kick the requirement up there to between 13 and 20 wpm for all

classes. And no-codes that haven't passed it after a year get booted which

will help clean up the repeaters.

SC

m.News. EarthLink Members should use their best judgment when posting to any newsgroup. Many groups have charters, published guidelines, FAQs, or "community standards" describing what is and is not considered appropriate. Usenet can be a valuable resource if used properly. The continued posting of off-topic articles is prohibited. Commercial advertisements are off-topic in most newsgroups, especially regional groups not specifically named for such. The presence of such articles in a group is not indicative of the group's "intended" use. Please familiarize yourself with basic Usenet netiquette before posting to a newsgroup.

EarthLink considers "multiposting" to 10 or more groups within a two week sliding window to be excessive. EarthLink servers currently limit the number of allowable "cross-posts" to 9.

EarthLink Members may not cancel messages other than their own messages. A Member may cancel posts forged in that Member's name. We may cancel any postings which violate this AUP.

You don't. Use a kill file. If you don't, you have only yourself to blame.

It;s much less expensive in the long run than screwing around with everyone's
first amendment rights.

FS: DRAKE L75 Amplifier W/Box LIKE NEW!!!!
Come with Manual and the Original Box.
Looks hardly used!! Looks BRAND NEW!!!!
Works very well!! No scratches, No Dents,Nothing!!
Shiny and like NEW!!!! In and out.
Very Rare to see one forsale and you won't see one in this condition.
Price: 1200.00
ritchi50@optonline.net

4757. Subaudible tones on old Icom IC-2000

Newsgroup: rec.radio.amateur.equipment
Date: 2006-10-28 19:05:49 UTC
From: "Bob D." <bobmgtd@insightbb.com>
Message-ID: <7cSdnepwqPhrNN7YnZ2dnUVZ_oKdnZ2d@insightbb.com>
Source record: 7043

How do you get the subaudible tones to work on the Icom IC-2000? The
procedure in my manual does not work. (Or, maybe I'm interpreting it wrong.)

Try buying a rig with 50 or more watts output. that's the USA law!

Icom IC-2000 Manual
http://www.icom.co.jp/manual/external/transceivers/IC-2000_H.pdf

Repeater operation - and set-up of CTCSS (sub audible tones) is on pages 13
and 14

This REQUIRES the usage of the SET mode.
Page 2 of the manual shows you where this button is on the front panel and
how to use it.

Page 5 shows you the front panel -- see the #4 TONE indicator at the top of
LCD ?

You MUST rotate your front dial to set the CTCSS frequency. THEN, the [DUP]
button must be pushed to finally set to EXIT the SET mode.

Whaaaaaaaaaaa!!

Have you ever sat on the toilet and tried to fart your callsign in
morse code?

You're so wound up, I bet you could fart your call at a nearly
perfect 1000Hz square wave.

Charlie -

Thanks for the HRO link - I did not see that they have "pre-announced" this change on their web site.

Based on the dates on their web site the sales/support will likely coincide with Tokyo HyPower being granted a FCC certification under Part 2 equipment authorization standards.

FCC R&O WT Docket 04-140 ("Omnibus" Amateur Radio proceeding), adopted on October 4, 2006 and released on October 10, 2006
http://www.arrl.org/announce/regulatory/wt04-140/faq.html
Q. What were the changes eliminating certain restrictions on equipment manufacturers?

A. Simply put, the guidelines on external RF amplifiers were clarified. They must still be granted a certification under Part 2 equipment authorization standards and may not be easily modifiable to non-amateur service use. They can not exhibit the ability to amplify in the 26 - 28 MHz frequency range. The FCC also decided not to include a definition of kits as they apply to RF amplifiers.

Changes to the 75 / 80 meter band are receiving the most "on-air" comments !!
New band chart -- as listed in FCC R&O, subject to clarification (typos in FCC R&O -- noted by many observers !!!).

What is your point.?

I amswered his query in a positive way.

You obviously know there ARE cw portions of bands PLUS a cw only band
which is OBVIOUSLY what was referred to.

If you could not manage 5wpm in 5 years then you have an unusual
difficulty, or you were not taking the time to do it and stay with it.
Remember I said "normal faculties and normal physical dexterity". A
person with ADD or Dyslexia may not be able to , and others with other
issues may not. (I know lots of blind guys who are hams, they dont
think blindness is an impediment to ham radio or the code)

He asked if cw would keep us from Amateur radio. I amswered the
question indicating I did not think cw was a difficult impediment and
used examples why from my own experience.

If you have dyslexia then youdo not have normal faculties and dexterity
and the post did not refer to you,. Why bother responding?

I SPECIFICALLY EXCLUDED you in my original post.

On a related note I emailed THP for a quote on the new HL-500V 500W solid satate 2M amp I was considering.
They want $2300 + $250 shipping..a little pricey for this country boy so I ordered a TE 1454 from Burghardt instead and Astron RS70M for a total of around $780

Source record: 6906

hi,

best bet is to recycle them at your local retail store,
target, walmart, home depot, lowes, etc.

you'll need special charger(s) for these batteries,
otherwise they can overheat and safety vent opens
and or cell can rupture (explode is also possible)

better idea is to use common Nicke Hydride
NiMh batteries available at above retailers.

be safe, do more research on lithium battery technology.

lion dude..

If Slow Code left, I would miss him.

I do not agree with him most of the time. As a matter of fact, he is dead wrong a lot of the time.

At least he stands up for what he believes in.

I myself, do not think that every ham should have to be able to send/copy code at 20wpm no more that I think they should be tested on psk,rtty, slow scan tv. etc.

Some people have a passion for code and some have a passion for other modes. I use them all from time to time, and to be honest, after I move next year, I am going to work on my code a bit more when I have the time to do so.

However, I will still give him a hard time about his ranting. After all I have not heard anyone tell him that he is not a real ham because he does not have psk nailed down..HI HI

best anti-RF ignition wiring TYPE

background:
I am getting my vintage AM/FM Delco reconditioned with the intent of getting that "cruis'n feeling" I will also add non-vintage sound deadening, and other electrical/static improvements noted here and elsewhere. Thanks for the help.

My query in a different area. In the sixties, I was always changing ignition cables attempting to minimize "ignition buzz" on my radio. (not really a problem since the mid-70s). Back then, I found one type that worked ok, but I cannot find it any more. (Most of this help in the 60's came from that Hams, thus I am including them in this question)

Now for the "new" question.
What "TYPE" of ignition wiring for maximum should I get for my Avanti (with modern electronic distributor) R2?

Most all new cars use anti-rf plugs and cables.. Just get a set of
quality resistor plugs and resistor wires.

There are only 2 types of RF supression wire: resistive and inductive.
The latter is often referred to as "magnetic" and is widely available,
but it doesn't seem to work any better than the resistive type. A
significant amount of igniton noise comes from the connection between
the plug and the plug wire, and grounded metal shields over the boots
can help here. There are wire kits with these boots, mostly for German
cars, or they can be made with metal tubing slipped snugly over the
metal bases of the plugs.

Don't argue with Mark unless you like to argure. Mark will toss out every bit of illogic he can to try to justify his case for being a bad hams, and he wants to let others like himself in so they can tear down the service.

I was part of the big RRAP CW and anti-ARRL fights of the late 90's up
until restructuring went into effect, then my posting tapered off. I'll
disappear again once the FCC totally kills off ham radio by eliminating
the code requirement. When that happens, I'll wear a strip of black
electricians tape around my arm in memorial and observe twenty-four hours
of radio silence in memory of a once proud service.

Rest in Peace, Ham Radio. You were a good and faithful friend.

Top posted ... opps!

Please, why don't you try 24 years of r.r.a.X silence instead of 24 hours of fictitious promises.

Good afternoon, Charlie.

Yeah, I saw that. Nice amp. Unfortunately way overkill for the FT-817,
and anyway I need something that can run from 13.8 volts.

HRO still won't be carrying the THP low-drive amps, until the FCC wakes up
and realizes what a dumb rule that is...

Thanks, I don't know why I didn't think of that. <sigh>

The rig is what it is, and the law is stupid and serves no purpose.

But, thanks for the advice... :-)

Yeah, that's unfortunately true.

I have the skills and knowledge, may be rather short on the tools and test equipment and time, and perhaps the manual dexterity these days... :-(

Anyway, THP seems to have a pretty good reputation and I'm willing to take my chances...

Are you sure, first of all, that it's ignition noise you're experiencing, and not alternator whine, or EMI from another source? Or is this just all precautionary?

First thing I'd recommend, IF there's noise, is confirming the source of it, before putting the time and effort into addressing one possible source.

Yep...as Matt says.....

I've got a so, so AM-FM radio with "inexpensive" plug wires.

The ignition is quite...but the alternator whines a bit. I know for a fact it's the alternator because it's one of the one wire types that comes in at about 1600 rpm when cold. So a first start at low rpm...no chargeing....the radio is noise free. As soon as the alternator comes in....whiiinnne.....

Mike

Another alternative is a Ten Tec amp they last produced in the 1970s
for qrp rigs.

Just to clarify, he's talking about an Avanti here; having an
all-fiberglass body, suppressing ANY source of noise is of utmost
importance.

And it could be noise from a DC motor (fans for air/radiator). It could come a
variety of sources. I would narrow it down, and it shouldn't be too
hard to do either....

Generally, to cut down the static noise (RFI) on older cars, you would find condensers on the alternator, distributor, wiper motor, and on the radio itself. There was also ignition shielding and resistor wires and plugs. The values on the condensers are all different, so swapping them may cause problems rather than being a remedy. I've never seen any on a heater or A/C fan motor, but it's also a source of RFI. Even sliding your butt on the seat covers will create a charge. You remember those little flexible tails that used to be attached to the chassis and drag on the ground?.

now this is interesting,
I remember fabricating for my neighbor's '62 Ford a metal can with
braided shielded wires to cover his distributor and cables out to the
plugs. I no longer knew when he drove out of his driveway by watching
the patterns on my TV (UHF). ;)

Now for the question.
Any one know if these boots, if self-fabricated, are essentially a
CYLINDER, grounded by contact with the engine block?

I recommend getting a copy of the ARRL Hints and Kinks for Radio Amateurs
book... get one of the mid-fifties editions and there is a whole section
on eliminating ignition noise with homebrew shielding over the plug wires
and shield cans over the distributor.

I agree that with modern resistive wires, things will be a lot better. Back
in the fifties, plug wires were normally copper. Often folks would buy it
on long rolls and terminate it in the shop themselves. Today, plug wires
have a conductive element that is conductive plastic, usually a nylon with
carbon in it, and the wire itself has a few kilohms of resistance. That,
combined with a modern coil design, means you get less high frequency ringing
after the initial spark impulse which cuts way down on the noise.

I did not realize it was an Avanti. In that case, I think I would be
worried less about noise issues than making sure the radio antenna had
a proper centerpoise, because it can't use the metal body. The more
signal you get, the more noise you can live with.

On piston-engined aircraft the plugs, wires, and magneto
distributor caps are all metal and are grounded. The shielded cable is
grounded at the mag end and the plug end. There's no ignition noise
from such a setup.

Ian-

Charlie's suggestion to try it with a dummy load is a good idea. That would (probably) eliminate stray RF as the source of the echo.

It would also provide a non-reactive load, in case your output stage happens to be oscillating at some frequency determined by the tuner. A further check on this would require a spectrum analyzer, ham-scan or a panadapter to see if you are transmitting on more than one frequency.

>and realizes what a dumb rule that is...

From a practical standpoint, what does it matter how much power an ilegal operator is running? I mean if these yokals are already out of their band (I presume the FCC is concerned about the freebanders) what does it matter if they are running 25 watt transceivers or kw amps? It's 16 db difference, who cares? The real concern ought to be that they are operating on frequencies that are not assigned for them. If them operating there is a problem, why not go after them and put them off the air. In fact (I amaze myself with my insight sometimes !) wouldn't it be easier to locate them if they were running some power? Wouldn't it make direction finding easier?

A 25W to 50W amp is quite easy to build using the CCI Motorola designs. Then
you can taylor it to your needs- built in auto or manual tuner, QSK
switching etc.

A bootlegger operating with 25 watts is likely to interfere with
legitimate licensed operators of the band in question.

A bootlegger operating with a kilowatt "linear" amplifier is likely to
interfere with legitimate licensed operators of the band in question,
and with users of bands which are harmonically related to the band in
question (a lot of the cheap "linear" amps are anything but linear,
and splatter quite badly), and with TV and radio reception for a
significant distance around the transmission site (fundamental
overload affecting the wide-open RF front end circuitry), and with
people listening to stereo and using the telephone (rectification
breakthrough).

The number of people who are adversely affected by the unlicensed
operation goes up quite sharply once an outboard amplifier is added
to the equation.

> The real concern ought to be that

>Wouldn't it make direction finding easier?

You do have a point there, at least for base-station operation.
Unfortunately, it's rather more difficult to take advantage of the
"louder is easier to locate" issue when the illegal operator is
mobile... and it's my impression that a lot of the illegally-
high-powered CB and freeband operators are mobile.

Also, the "locate them and shut them down" approach assumes that
resources are available to actually locate the illegal operators. The
FCC seems to have largely abandoned (or, at least, seriously scaled
back) its own field-enforcement efforts, over the past couple of
decades... if I recall correctly this dates back as far as the Carter
administration. The FCC now seems to be depending largely on the ham
community to report suspected cases of freeband/unlicensed-10-meter

operation.

I suspect that the FCC is trying to deal with the problem at an
"earlier" stage of the chain... stopping production and sale of the
amplifiers, rather than trying to track down individual users.
They don't seem to be particularly active/effective even at that,
though, considering the ease with which one can locate numerous
companies making/selling such amps (and easily-modifiable
freeband-capable radios).

Yes. I made some from conduit that extended about 2" above the plugs.
I found it didn't mater whether or not the tops were covered with
metal, but I applied a bead of silicone RTV to prevent the sharp edges
from cutting through the wire insulation. I slit the bottom of each
tube lengthwise to make it easier to press it easier to press around
the hex part of the plug.

That's the same outfit that told me they could supply 7mm wires but only if
I wasn't putting the stainless shielding back in place.

I currently have a HTX 202 and I am trying to fiind a good covert headset on E-Bay because I work as Maintenance and I can have the radio on at work as long as it can't be heard while I am working in the building because the tenants might take it the wrong way.

So if someone could help me and send me some links to sales if they have some or can help me out it would be appreciated.

Sometime in the past couple months I read a one page writeup on an inexpensive device being marketed that provides an analog to digital interface to computers. I think you could use a linear 0 to 5 VDC input such as from a wind speed sensor and feed it to the conversion device which would provide a digital output to your computer.

I only subscribe to QST and CQ magazines, but I give them away when I'm done with them so I can't go back and find that article. Anyone else see what I'm asking about?

Do you have the manual for the radio they are all listed in the back.
OPC-440 5.0 mtr
OPC-647 2.5 mtr
for mic extension..

I have a friend that just bought a used Ten Tec Scout, it came with a 40m and a 80m band module. He is looking for 30m and maybe 15/17m as well.

If you have any of these you'd like to sell, please send me an email.

I have done this to my IC2800 with no problems whatsoever. the radio is with the spare wheel and the mic plugs into a socket mounted in the dash with the cable (CAT5) being routed around the car.

Also I have extended the display lead in a similar way (but due to not having a 6 way plug/socket for the dispaly out came the 'iron and heatshrink and more CAT5) again no problems and due to the fact that I couldn't be bothered to measure, the cables are long enough to mount the radio in the back of a huge camper and still use it from the front seat!

Sillybilly I missed out the important 'wiring diagram':

use a test meter on ohms or a continuity tester to cheeck that:

pin 1 (plug) goes to pin 1 (socket)
pin 2 (plug) goes to pin 2 (socket).....
.....)
pin 8 (plug) goes to pin 8 (socket)
This will give a 'straight through' extension.

The socket I used was a wall mounted type, which I adapted to suit the
fitting space available in the car, and the wires connected via IDC on the
back .

I have HEARD of people using CAT5 patchlead and gender changer (double
socket) but not tried it. I just used/adapted what I had in my 'junk box'

If in doubt and near Cardiff let me know, I have loads of CAT5 cable. I'm
sure we could 'hook something up!'
All the best

I have an M C Jones MicroMatch (Microwave Devices) and the pot in
the indicator unit (Model 262 w/ Model 261 Coupler Unit) was replaced
with a 500 ohm potentiometer. What is the correct value to allow the
scale to match the pointer, and is it straight or tampered? Would
like to have a copy of the schematic, if anyone can e-mail it to me.

I'm using a standard Cat5 cable you'd use for your computer. Don't
use a crossover cable as it won't work and just might wipe something
out on the radio. I put in a 6 foot cable and it works just fine.
The only problem is that it slides all over the place as the cat5
cable is smooth.

One thing really nice with this radio is it has narrow fm and 500
memories. I just used the bracket it comes with and put velcro on the
bottom of it. Got it stuck to the front of my dashboard.

Its a great radio.

the fact the mike is not mounted on the control head seems to me be a
major design fault. after all, phillips, tait, etc. got it right all that
time ago...a retrograde step indeed.. just my two bobs worth.....j
(sorry no solutions :^))

4835. Alliance tenna rotor wiring

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-03 15:44:18 UTC
From: n4aeq <tucker@conninc.com>
Message-ID: <1162568658.792354.101870@h54g2000cwb.googlegroups.com>

Many years ago in the TV bussiness we would use a alliance tenna rotor
4 - wire on a 3 - wire
channel master control box. Now i have the same combination i need to
install on my 6 meter beam
however i fot got the wiring setup?
Does any remember the proper wiring, i think it was combine 1&2 or 3&4
or maybe just dont use #4 but i cant remember the wiring now.

>
Yes that's the mic lead. Got the tape measure out and measured the rough
length of the extended mic lead, it's about 10 meters.

The 'head' on the 2800 only has 6 wires and I just 'snipped & extended' for
that using the 'extra (unused)' wires as earth/ground.

2M of cat 5 and a back to back coupler work fine for one of my cars that has
the 208e in it.
And heavy duty velcro mounts the head unit to the dasboard, and the hook
strip sticks the radio body to the carpet.

Robin

I've done something similar with my 208H as well.
I've used flat telephone style cable about 1.5 metres long, no ferrites, and
a RJ45 back to back adaptor to connect the standard mike. Works fine,
though I'm told I have some buzz on TX if I have my vehicle headlights on -
not sure if it's alternator whine, or being induced through my unshielded
section of cable, have yet to investigate that.

I dunno about that but I've extended my IC706 separation cable with STP
cable (CAT5 with shield) very successfully. Cable 10m long no problems.

There are two pilot lamps used for fuses next to the input connectors
on the receiver board. With luck you have burned one of these out.

Try as I might for now I can't find the P/Ns.

hi all,
i was wondering if any body could shed abit of light on a fault i have
with my FT707,
when switched on the display shows random numbers it reads, 9x.xxx.xx
(x been a constantly changing number)
there is no rx or tx on any band, yet there is audio, and the MARK does
work, but only on 20m
there is no xtals in the set.
it's a 707 with WARC bands
i have no clue as to what it could be...any help would be great.

Hi Mart,

Do you mean the heterodyne oscillator crystals are missing? If this is the
case then there will be no conversion and thus no freq readout and no RX or
TX.
Do you have a schematic and a scope?

4862. Dead Yaesu ft-890 Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-05 17:14:58 UTC
From: Steve <123@hotmail.com>
Message-ID: <b_o3h.7254$3L.7178@bignews2.bellsouth.net>
Source record: 6848

Went to fire up the Yaesu Ft-890 and it won't power up. I have power to the radio but pushing the power button does nothing.
Used it a few days ago and everything was fine. There was no storm here so it didn't get zapped.
Is there some kind of fuse inside this radio?
I have limited electronic knowledge, so is there something I can check that may be a common failure to this rig that I might be able to do?
Bought it on ebay last year and its been flawless, but to me its not worth a few hundred to ship it out to be fixed.

Well, you answered your own question ...

"I have limited electronic knowledge -- its not worth a few hundred to ship
it out to be fixed."

Sell it on eBay as a "Broken" or "Tech Special" -- you will get some of your
money back to buy a new radio (with warranty) at your favorite amateur radio
store for Christmas.

Steve,

I asuume by "won't power up" you mean completely dead - no lights
meters etc.

The FT-890 uses an external power supply. Are you using the Yaesu
FP-800 Power Supply or another supply? The manual warns users about
reversing the power input leads!!

Try the following:

1. Check the power supply leads to see if you have 13.8 volts. You
will need a digital volt meter but these are pretty cheap at Radio
Shack or your local hardware store. Disconnect the supply from the
receiver and record the voltage.

2. Even if you have 13.8 volts the supply may not be able to provide
enough current if it is defective. Check it with an automobile light
bulb. This will show if there is enough current to power the receiver.
Record the voltage with the light on - still around 13.8V??

3. Reconnect the power supply and measure the voltage as you turn the
power on and off. Any change? If everything is OK so far the power
supply is OK

4. If your meter has an amp scale put the meter to the amps range (2
amps or more). Disconnect the red lead only (leave black attached)
and put the meter in series. (one probe to the red lead and one to the
+ output of power suply). Measure the current with radio power switch
on. Any current flowing?? If you get nothing at all you may have a
loose power connection internally in the radio, a defective power
switch or unfortunately an internal power circuit problem.

Are you confident enough to open the unit and poke around with your
meter??

Good luck - Roger

Power supply OK. Even tried a brand new car battery to make sure. No lights
or anything comes on.
I have enough nerve to take the covers off and poke around a bit as I have
nothing to lose at this point.
Am retired and divorced once and buying this radio was chore, so if this is
scrapped there will be no replacement.
It has the auto tuner built in, what would be a fair price to ask for it for
parts?
Thanks for help.

Steve, ask around about the local ham radio club... There will be folks
in the club who will be happy to give you a hand trouble shooting your
radio...
As you drive around keep an eye open for the tell tale beam on a tower
where a ham lives... Just ask folks you know or meet if they know any
ham radio operators... Ask the guy next to you at the donut shop...
Walk into the Radio Shack store and ask... If you are in mid Michigan
give me a buzz on here and I will make arrangments for someone to help
you... The CB shop at the local truck stop may be able to offer
advice...
The electronics professor at the local unversity or college... Ask
around the high school and there is likely to be someone who knows
someone... There is help if you just work at finding it... The radio
is unlikely to be scrap...

good luck - denny / k8do

Have you priced it? Might that be a factor?
The rep of the 'autotune' Alpha amps is nothing to write home about...
Might that be a factor?
Folks like Commander, QRO, Acom, and Tokyo make amps that put out more
power at far less cost and that do not shut down in the middle of
working a new country,,, Might that be a factor?

Don't take my rhetorical questions as an attack on Alpha... I wish them
well, but their product appeals to a very small niche market...

Steve,

Denny had some good ideas on how to get your radio fixed by local hams etc. A radio that is completely dead is easy to troubleshoot - intermittents are much trickier.

Have you checked the power cable to the radio? Unplug it from the rig and use the meter and lightbulb to verify that all is OK on the connecter end that plugs in to the radio. There should be fuses in the positive and negative leads of the cable. You need to test them with a meter. Often they look OK to the eye but they are blown. If you don't have a meter try replacements of the correct amperage rating.

If you decide to take the covers off here are a few tips. Disconnect the power cable. Get a container to store the screws. They often get lost and it is impossible to find exact replacements. Do not remove any boards etc. - this is best left to someone with experience and proper test equipment. Look in the vicinity of the power socket - anything burnt or scorched traces on the boards?

I took a preliminary look at the circuit drawings for the FT-890. It looks like there is a relay that is activated by the power switch. When the radio was working did you hear a "click" when you turned it on?? If this relay is blown this is not an expensive repair.

Steve - it can be discouraging when this happens but don't give up on your radio. Local hams are often willing to help out. There are some FT-890 owners on the Yahoo group at http://groups.yahoo.com/group/FT-890

Good luck - Roger

4872. Wanted: WW2 radio items for B-17G restoration

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-06 18:57:27 UTC
From: k5dh@raytheon.com
Message-ID: <rAL3h.5$gh3.0@dfw-service2.ext.ray.com>
Source record: 6858
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

Hi all,

I'm gathering original WW2 radio equipment for use in the
restoration of B-17G Flying Fortress 44-8543A, "Chuckie",
operated by the Vintage Flying Museum of Fort Worth, TX.
Yesterday I did a quick inventory of the equipment we have
in storage. We have most of what we need, but we still
lack some very important pieces.

We need the following SCR-274-N command radio items:

BC-442 antenna relay ass'y with RF ammeter and vacuum cap
BC-450 control box for three receivers
BC-451 control box for four transmitters
BC-458 transmitter, 5.3 - 7.0 mc
Any and all types of connectors associated with SCR-274-N
Ceramic "beads" used as insulation on the antenna leads

We need the following SCR-287-A liason radio items:

FT-142 mounting tray for BC-306 antenna coupler
PL-59 connector (need 2)
PL-61 connector (need 2)
PL-64 connector (need 1)
SA-13 knife switch (I think it's a 3PDT)
RL-30B trailing wire antenna motor and spool ass'y
F-10 trailing wire antenna fairlead ass'y
MC-163 trailing wire antenna element
DM-28 dynamotor for BC-348 receiver
J-37 telegraph key (NOT a Winslow part, too new!)
Ceramic "beads" used as insulation on the antenna leads

The equipment must be in excellent original condition with
no modifications, but it does not have to be electrically
operational.

We are a small museum, and we have no money to buy this kind
of stuff. It takes all of the money we can muster to keep the
Museum open and the B-17 flying. We're looking for donations
here. We are a 501c(3) non-profit organization. All donations
of equipment, money, and services are tax deductible. If you
have any of the equipment we need, please consider donating it
to us, and help us to share history with future generations.
Thousands of people a year tour the B-17 at air shows and in
our hangar. Chuckie is one of only TEN B-17's still flyable

in North America, and not all of those ten are flown with any regularity.

Here is the URL for the Museum's web site:

http://www.VintageFlyingMuseum.org

Thanks in advance for your kind consideration, and also a big Texas-size thanks to those of you who have donated equipment and services to us recently:

KB1LNA, Charles Geis (complete BC-375-E transmitter station)
KX8XX, Mark Schmidt (UNUSED tuning unit TU-26B w/orig. box!)
Jim Bane of Jevic Trucking Co. (transportation services)

I donated a BC-348-R receiver, BC-459-A transmitter, and T-17 pilot's hand mic from my own collection!

73 to all,
Dean Hemphill, K5DH
B-17G 44-8543 "Chuckie" volunteer crew member
Vintage Flying Museum
Fort Worth, Texas

Yes when the radio worked I indeed did hear a click. That's how I knew the
radio wasn't working without even looking at it.
That distinct click wasn't there and I looked at the rig and saw nothing was
on.
I was hoping it was the power supply but I tried to hook the rig to a new
car battery and nothing happened.
The fuses in the line are ok and there is power at the molex connector end
that plugs into the radio.
Thanks for replies and suggestions.

Very cool....Manufactured by Sony/Tektronix. Dual-trace and Delayed
sweep.

2.5x2.0" display

DC to 35MHz, dual-trace (alternate and chop)
scope face about 2.5" by 2"
vertical deflection: 1mV to 10V/division
sweep rates: 0.5 sec to 0.2 us/division, 10x magnifier (for
20ns/div)
sweep modes: automatic, normal, single-sweep
other features: variable hold-off, delayed sweep, x-y mode
portable, line-powered (115/230VAC), or external supply
(12/24VDC)

For more details, goto:

Steve,

I only have the downloaded schematics to work with. I was not able to find a free service manual download on the net so I can only make some assumptions about circuit operation.

The schematics show the power coming in, via the molex connector, to the PA board. There is a filter circuit consisting of some capacitors and a large inductor. The output feeds a relay (clicks at power on) which provides power to the rig. The relay is controlled by the front panel switch and a transistor control circuit associated with the PTT.

One thing to try is to check the keyer switch settings on the top of the radio. The Break In switch may be in the wrong position. Is it in full or semi?? Try both? Is the keyer in manual?? Remove the microphone as well in case there is a PTT problem with it.

You could try measuring voltages starting at the molex connector with the cover off. Put the black probe to ground and trace the circuit with the red probe. Look for loose connections, burnt traces etc. There is a set of schematics in pdf form at http://www.kb2ljj.com

Let me know how you make out - Roger

Ralph,

They had a lot of manuals but no FT-890 service manuals. However,
they had the user manual and schematic.

Thanks Roger

4879. Re: Dead Yaesu ft-890 Help!

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-07 04:29:47 UTC
From: sailtamarack@yahoo.ca
Message-ID: <1162873787.206478.206280@f16g2000cwb.googlegroups.com>
Source record: 6865

Steve,

I searched through the Yahoo Group - Amateur Repairs for similar "dead" FT-890 problems. I found one which may be of interest.

As the unit ages oxide builds up on the connector mating surfaces and sometimes leads to erratic operation. In one case, an FT-890 had exactly your symptons - dead and the front panel power switch did nothing. The solution was to disconnect all power and external connections and remove the covers (saving the screws). Then carefully disconnect and reconnect, one by one, all the connectors on the various boards. The disconnect/reconnect scrapes away some of the oxide on the connectors and restores a low resistance connection. Then reassemble the unit and try powering up again. Make sure you have discharged yourself for static (wear cotton clothes and no nylon carpet!!) prior to starting the job.

If this solves your problem you may be OK for a while. In a few months it may come back. In that case you should buy some deoxidant from a radio repair outlet and use it on the contacts for a longer term solution.

Hope one of these ideas works and it is not a component failure.

Regards - Roger

Hi all,

I am looking for the Technical supplement for the FT 50r.
I have the schematics and other info, but I really need the service
manual.

Any help would be greatly appreciated.

Believe it or not I got it working! I am shocked. Not sure what I did.
This rig might of been mobile as I got a mobile bracket with it and the power cable was questionable around the fuses (bends in wire) so I replaced it.
With your suggestions I opened the radio up and started tracing the wires from behind the molex connector and found where it connected to the circuit board.
I took the wires loose and cleaned it up cause I kept seeing the voltage on the multimeter swing. A couple of times I heard the relays partially click but no power.
Anyways, with the radio in halves I got it to power up, however when I put it back together it was dead again with no partial relay click.
I took it apart again to the point where it would power up and slowly put things back and checked power after each segment.
Now the radio is all back tohther and so far still working.
Perhaps something came loose cause I know the pervious owner did a Mars mod on the radio and who knows what was done if there were other owners.
Thanks for everyones help.

Hi

I would like to replace the power pack with something with a larger capacity. I followed the instructions to remove the two black trims and 5 screws, and can take out the power pack, but it consists of 3 AA(?) cells wrapped in a moulded plastic container, arranged in a triangular cross section, with a wire running to the motherboard. The question is, has anyone else experience of replacing this?

Hi Guys,

I have received a few emails about the TS 870 service manual. I checked and it is now available on www.mods.dk under Kenwood and then manuals. This is probably the best option for multiple downloads, however if you have trouble getting it from mods dk I am happy to work out way to get it to you. I once heard of a download server that enables the file to be uploaded to it so that another can download it after receiving an email invitation, I'll try to find out about this method, since most email accounts will not allow 40Mb files.

I apologize for cross posting, but I do not know the prime group for this reply.

When the truth is known, a lie is a deliberate attempt or a deliberate action to mislead.

A lie does not require an oath to become a lie. A lie is a LIE in all circumstances.

You mean 2008. By that time we will be overrun with illegal aliens, but no matter, as Al-queda, after celebrating our elections, is now formulating plans for the biggest terror attacks yet, knowing Congress will have no guts to do anything about them.

If you need 4X4, better work it now, because the first thing the Iranians will do is nuke Israel.

Nope! I mean 2009!!! The next president takes office in January 2009.

Now, congress and guts. The Socialist Party of the USA [AKA Democrats] will fund, directly or indirectly, Al-Quada NOT to attack us. If we are attacked they will threaten sanctions. If the sanctions threat doesn't work they will debate the existence of Al-Quada at the UN. If that doesn't work, then Al Gore will hug some trees. :-)

PEACE at ANY PRICE is called appeasement. We all know where that led in the 1930s.

The war on terror will run well into the mid 21st century. You better believe it!

Markie takes pride in all the various ways he can mis-spell something.
Try not to figure out what Markie is saying, it will just give you a
headache and it's not important anyway.

Looking for a working (properly) filter unit (including the infamous stepper relay) for an IC-720A.

Alternately, if anyone has an NOS RL2 relay Part number SR-53-44C, that would be great as well.

TIA

Brenda Ann

How are you measuring the SSB output?

1 to 3 watts indicated on a moving needle type meter will be very close to 10 watts PEP.

I have picked up a dead tr-7800 at a junk sale

The price was good - the transmit was dead but apparently the receive worked.

When I got it home I could hear static but the led frequency display did not even power up.

I can not locate even a circuit diagram on the web - can anybody point me at any resource that might be useful in getting this transmitter to at least receive.

thanks
Bruce

We already DO have an 'America hater' in the White House, and his name
is 'Shrub'.

He already HAS nearly destroyed the country and the Constitution. The
Democrats are the country's only hope for a return to sanity, and the
vast majority of the nation's voters understood that.

Let him do it,Jail is the best place for him.
****

The bottom line remains. No-Coders should salute their superiors and should
give up their chairs as a matter of courtesy.
Doing so is a simple show of respect.

No-Coders should be made to stand at the back of the room until they can
pass no less than 5wpm. Then, and only then, will they be allowed to come to
the front to whine.

When are you stupid 31%ers going to get over it? No one gives a fuck
what you think anymore; chickenhawk bitches like yourself have just
been rendered irrelevant.

you're being too kind
When I grew up I was taught that every boy could grow up to be President.
I never imagined it would be the rich kid flunkie in the back forever
daydreaming in class.
```

4967. Best places for buying components for homebrew projects

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-12 21:32:42 UTC
From: "C. J. Clegg" <reply.in.group@nospam.no>
Message-ID: <pan.2006.11.12.21.32.41.387498@nospam.no>
Source record: 6803

What are some of the best places for buying components for homebrew equipment, these days?

I'm looking for places with good stock, good variety, and good websites.

Right now I'm mainly looking for B&W Miniductor stock and transmitting capacitors, for making antenna traps, but I'm also looking to build a linear amplifier for use with my FT-817 ... and after that, who knows?

I've lost track of the good places over the years, and many of them have gone out of business, so any suggestions for the current best places would be much appreciated.

Start with RF Parts for standard transmitting capacitors, tubes and
associated parts for amplifier building. Yes, you might find cheaper -
somewhere -- but start here.
http://www.rfparts.com/

WD7S is a good source for major assemblies for advanced or experienced
builders (no "teaching" technical support should be assumed).
http://home.earthlink.net/~wd7s/contents.htm

Get to know your local metal scrap and garbage/junk man -- so much stuff is
thrown out these days -- that could be useful for amateur radio projects is
amazing -- the current "new amateur (Novice) -- seems to have little
interest in building or the necessary basic skills to even start.

B&W Miniductors --- those favorites of do-it-yourselfer's - Barker &
Williamson's (B&W) Miniductor and Air Dux coil stocks-are getting harder to
find. When you do locate a source, you'll find the inductors are rather
expensive. Typically from $15 to $100 each !!
http://www.bwantennas.com/coils/coilcat.htm

QST August 1997 article. page 33 by Robert H. Johns, W3JIP
"Making your own air wound coils and inductors !"
http://www.arrl.org/tis/info/pdf/9708033.pdf

IF you are going to be building an triode and tetrode amplifier --
then you should seriously consider usage of the G3SEK Control Board (over
1,000 sold to builders):
http://www.ifwtech.co.uk/g3sek/

4969. Collins, Drake etc to Ft. Wayne

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-12 23:10:09 UTC
From: Henry Kolesnik <kolesnik@sbcglobal.net>
Message-ID: <lRN5h.24751$TV3.7609@newssvr21.news.prodigy.com>
Source record: 6805
Cross-posted to:
rec.radio.amateur.equipment,rec.radio.amateur.boatanchors,rec.radio.swap,alt.ham-radio.marketplace,rec.radio.shortwave

It looks like I'm going to the Ft. Wayne hamfest, will be there Nov 17 and
Nov 18 till about 1 or 2 PM.
I plan on bringing the following if there's any interest:
Collins 30S-1 $1600.00
Collins 32V3 $1600.00 spare final and matching Astatic T-3 mike
Collins 30L-1 $600.00 Round 2 spare finals
Collins KWM2 Round $600.00
Collins 651S-1 $1100.00
Drake L75 $1000.00 One 3-500Z with internal supply 160 thru 10
Central Electronics 100V $600.00
Cubic R-3030 dual communications receiver VLF HF $1600.00
ITT Mackay Marine R 3021A VLF HF $600.00
Hallicrafters SX 62A $200.00
Hallicrafters S-40B very clean $125.00
All items in above average condition, very little wiggle room on price as
they're going to eBay if not sold or traded.
I'll be driving I 44 Tulsa to St Loius and perhaps a bit beyond afternoon
Nov 16 and on Nov 17 driving I 70 to Indianapolis and I 69 to Ft Wayne
arrving early Friday afternoon. I might be able to stop along the way
depending on where and the time.
I'd also consider a trade on good acoustic dreadnought guitar from Martin
HD 28, Taylor 810 or 910 or Gibson or a good older 5 string banjo.
Let me know
Hank wd5jfr

Some people say Bushie was born with a silver spoon up his nose but I
know that didn't happen until his 30's.

Let's see, prior to that was his drinking problem and, oh yeah, running
a major league franchise into the ground...NO, wait...there also was a
phony oil company that he ran into the ground.

Iraq? Afghanistan? Katrina?
Bushie's just doing his usual "heckuva" job.

Any wonder that Dems gained Congress?

BTW, the only fraud associated with Kerry was Karl Rove's invention.

"I am the only one who has outer filthed Ward" -- James C. "Crackhead" Cracked voluntarily self-immolates, in MID: 1159678991.838385.310840@m7g2000cwm.googlegroups.com

"When I told Abbie Hoffman that he was the first one who made me laugh since Lenny Bruce died, Hoffman said, "Really? He was my god." The combination of satirical irreverence and sense of justice that Bruce and Hoffman shared was the real spirit behind the Yippies--a term I coined to describe a phenomenon that already existed: an organic coalition of stoned hippies and political activists who engaged in such actions as throwing money on the floor of the New York Stock Exchange, then explaining to reporters the meaning of that symbolism. Folksinger Phil Ochs summed it up: "A demonstration should turn you on, not turn you off." So when journalists link the Yippies with misleading bedfellows, at best it's careless shorthand; at worst it's deliberate demonization. Osama bin Laden wanted an aircraft to crash into the Pentagon. Abbie Hoffman merely wanted to levitate it." -- Paul Krassner, http://tinyurl.com/ehu3v

4974. Problem with an IC-706 & SWR spikes

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-13 13:19:28 UTC
From: kuzen001@duke.edu
Message-ID: <ej9rd0qvk1@gargoyle.oit.duke.edu>
Source record: 6810

IC-706MkIIG was working perfectly. Typical setup is 30 watts output, PSK31 or RTTY, via short length of coax to an MFJ tuner, thence to ladderline running to 250' low horizontal loop. Working with no problems BEFORE I decided to rearrange my radio area. Rearranged my gear and ran into trouble as soon as I fired things back up.

On two bands the SWR is never less than nearly 2:1, as indicated by the MFJ meter, but much much higher by the 706's internal meter. Try to tune the antenna system; if you dial in less inductor than it wants, or a capacitor setting it doesn't like, SWR suddenly spikes to infinity and the tx shuts off after a second. (Tuning is done at lowest power setting, not 30 watts.)

The 706 works fine on 6, 10, 12, 20, 30, and 40. (I worked a guy in California on 12, just checking things, and after we cleared a ZL called ME on the frequency--ZL on 30 watts is clearly "working fine.") But on 15 and 17 meters, it will NOT achieve a low SWR, and sooner or later it WILL oscillate or denooberate or whatever it is doing and spike the SWR, and shut down.

I tried a lot of things--different coax, etc.; nothing made a difference. (I was thinking at the time that it was the rearranging equipment that caused the problem.) Then I did the systematic testing and found the problem is only on 15 and 17 meters. (Fifteen's my favorite band, too.) Now the only two things I can think of are A.) some problem with the big loop, that presents some weird resonance on 15 and 17. Or more likely, B.) some problem with a component in the 706, one in the output section that is specific to 15 and 17 meters.

Thoughts? TIA!

If there are several, call them "sockpuppets" too
When all else fails, accuse various and sundry kookologists of e-mailing viruses to you. This is a sure-fire method of garnering sympathy and ensuring that the General Public will always see things your way. An especially effective sub-strategy here is to accuse them of infecting you with the 'Sasser' worm via e-mail.
Quote notorious scientists or writers - it makes it look as if they approve the drivel you are writing!
(9-Jul-05) Anytime your computer is infected with a virus, bogged down by spyware, attacked over your internet connection, or otherwise suffers from preventable problems, government agencies are responsible and are trying to silence you and are monitoring your computer files.
Ignore all traffic signs and feel free to trespass, you don't have to obey any rules.
Scare your enemies with lawsuits, police escorts and whines.
Always back up your empty (albeit noisy) threats with phony LARTs, false police reports, and harassing letters to the FBI and other gubbermint agencies.
Be vigilant in your redundancy. The more you repeat yourself, the more likely others will believe you!
If you can't find anyone as crazy as yourself to support you in the flamewars you start with the normal population, create sock puppets and use anonymous remailers that shamelessly hang on every word you write.
(17-Mar-05) When dealing with law enforcement, remember that it is they who have the problem, not you. Be sure to inform them of this at every available opportunity, as they will surely appreciate your constructive criticism. Be sure to make them aware that YOU KNOW YOUR RIGHTS! ("The cops like that, when people know their rights. That way they don't have to read them to you on the way to the station." - George Carlin)
The more your fake personalities adulate you, the more respect you'll get!
When confronted with a reality that you don't like: Announce loudly that you are departing, never to return as long as there's an Internet. Come back in three or four days and claim you were drunk, hacked, abducted by alience, or forged. Alternately you can just not even mention your prior departure, and if anyone asks you about it, either ignore them or respond with something along the lines of "YOUR NOT THE BOSS OF ME! *PLONK*!" People really know you mean business then.
Always remain clueproof.
(20-Mar-05) Anyone who does not believe that you are the reincarnation of [$DEITY_OR_PROPHET] is obviously an infidel lacking in faith whose soul in in peril of everlasting damnation.
When responding to one line challenges, post paragraphs of rants and

screed in response.
Incoherency is not a roadblock to poasting.
Neither is illiteracy.
Delusions poasted often enough become fact.
Claim you will destroy <insert newsfroup> for attacking you.
When spnaked, send cmsg for Fanboi newsfroup(s).
Find your Lame, Use your Lame, Be your Lame!
Post Edit when the TRVTH hurts.
Always sneck the offending newsfroups.
Always poast pictures of yourself so you can be admired in all your k00ky glory.
Always accuse others of the very acts you are guilty of.
Post lots of boasts about your high IQ and incredible talents.
(20-Mar-05) If you repeat a lie often enough, it becomes the truth.
Anybody who fails to understand this is engaged in a deliberate campaign of misinformation and character assassination.
Always <plonk> somebody just before replying the plonkee!
The k00k considers itself the most intelligent person in any conversation, possibly on the planet. Other people are benighted and ignorant, and have been waiting their whole lives for the k00k to rescue them from intellectual darkness.
Write a self-published book and claim it a success. Bonus points for comparing it to "Mein Kampf" and/or the Bible.
Declare yourself equal to a deity of your choice.
Claim that you've come from other planets.
Claim thousands of past lives.
Frothing complaints carry far more weight when you send them from "legal@" some domain.
Nothing strikes terror into the hearts of your detractors more than telling them that you're archiving their messages for possible use in the future.
Never forget that everyone else posting to Usenet is a paid disinformation agent looking to discredit you.
Usenet is governed by US law. If a poster in Romania killfiles you, he's obviously violating your 1st Amendment rights and can be sued.
Every news admin in the world hangs out in NANAU, and they're just dying to nuke the account of that meanyhead who just called you "fucknozzle". Drop 'em a line - that's what they're there for, after all.
AUK will be closed down. Just you wait and see.
They've nuked hundreds of accounts in the name of free speech and *yours* will be next.
The k00k will, without any trace of irony, lie, manipulate, impersonate, censor, and declare themselves powerful in ways ranging from the ability to have an account shut down to being God Herself, in order to convince people that they are not liars, manipulators, censors, or insane.
Abuse women while telling how many hundreds you've loved. Nevermind that you're one ugly motherfucker and that there were 30,000 femininas that thought you were a scumbag with bad teeth.
Remember that your ko0ky klaims are 'facts', and that 'facts' do not require proof.

Do not neglect to poast your responses to forums that the originator doesn't read. This will make the people in that forum very impressed with how you tear him to shreds without him being able to respond. They like it even better if you are off-topic for that forum.
Keep in mind that lack of evidence supporting your konspiracy theory actually _is_ evidence, of how effective the konspiracy is in hiding.
(06-Oct-05) When spanked, always retreat to the safety of the Ad Hominem.
(04-Aug-2005) When spanked mercilessly for days on end, proving with each poast just what an illiterate and ignorant fool you are, ALWAYS claim ownership of [person(s),froup(s)]. This works on so many levels. It inspires dread in your opponents that they will no longer be able to poast in their home froup and that they will eventually have to pay rent, to name just two.
Any problems with your poasts are the fault of the konspirators, who are trying to stop you from preventing the extinction of humanity.
Konspiracies that are able to subvert whole governments are always unable to silence konspiracy ko0ks.
The entire United States government is willing to spend millions of dollars for the sole purpose of harassing you.
Hollywood is making movies based on your personal life.
Do not consult psychiatrists or other mental health professionals. They are part of the konspiracy, and will sedate you and lock you away and keep you drugged if you tell them the truth.
Numerology and Astrology are respectable sciences and are useful for proving your case.
Everyone is Tim Hill, or David Green, or...
There is a fine line between trolling and kookery. Find that line and cross it repeatedly. When you are killfiled and/or LARTed for net.abuse as a result, claim victory. If you lose multiple accounts, this merely proves that you are indeed a world-class troll, with a black-belt in manipulation.
If you respond to every post someone else makes, they're obsessed. If they respond to less than 1% of your posts, they're even more obsessed.
Publishing people's real names, addresses, and phone numbers when there's no other way for you to come out of a flamewar with any dignity is cool, and proves that you are a master of secret internet information stores, and absolutely not to be fucked with.
Everyone is out to get you. You can put a stop to this by telling everyone that they're out to get you at every available opportunity.
You are the only sane one.
Those that give you a hard time about morally bankrupt things you yourself admit to are just persecutioners of the new inquisition.
Yelling in all caps and cursing at your detractors is debate. Your detractors laughing at you with sarcastic remarks is obvious anger and jealousy.
If doing something results in the loss of your account, legal hassles, or blunt trauma injury, do it again. It always works better the second time.
Asterisks, lots and lots of Asterisks.

Poking holes in kookscreed is stalking, and is a felony.
K00ks LOVE to "connect the dots". They are, of course, dots that only the k00k can see.
"They laughed at Einstein, too!"

...with thanks to Aratzio, Dr. Flonkenstein, Dan Baldwin, Cujo, CJ Osterwald, Jade, Bookman, and John Henry, of AUK. Meow. Original thread at http://tinyurl.com/3fsho - some posts may not appear due to x-no-archive headers. The spelling mistakes are intentional, dolt.

I'd like to add Dan's Small Parts web site to that list. No toobs, but lots of RF-related parts. Great prices too.

What are you listening to, CB? I'm not on CB, so you don't need a filter
for me.

"And no, I did not have sex with my son. But if I did I certainly
wouldn't tell you. Something so beautiful and precious should be kept
private." -- Kathy L. Mosesian, or possibly not really her, confesses
she may be a liar and committer of incest with her own son, in MID:
<cfcd3f4660694e3afeaadaa2723e9ab1@msgid.frell.theremailer.net>

The reporter asked Colin Powell (or George Bush), "What proof do you
have that Iraq has weapons of mass destruction?"
He replied, "We kept the receipts." -- Bill Hicks

"They thought I was fair game. I was an instrument of purpose to achieve
their desires and not 100 percent real and ALSO that they had me by the
short curlies because I thought that the world revolved around them and
therefore I think that I am fair game and rightly so. If they want to

play dirty, I get to too. It's not a one-way street. I will use the physcial strength that I have over them, my superior 5'7-3/4" height advantage, the boxing moves I paid to learn, the suprise of pussyfooting up to them with their back to me in a public place 18 1/2 years after the fact and thus not only do will they not know that I am but a pica's distance away from them, but that I even exist on earth." -- Chris Tsao is secretly John Wentzky's psychic twin. MID: <1161246083.152300.195760@m73g2000cwd.googlegroups.com>

Looney Maroon nominee for August 2006 Johnny D Wentzky foamed:
"You never asked someone who goes into areas of the internet that are only for adults who has an underage id somehow or another if they are a cop posing as an underage person online?
I guess lots of people just don't watch dateline or read stories much. Why don;t you go to pervertedjustice,com and see what they do. They are awash in their self-proclaimed glory after they lied to membners of the public.
They are awash in their self-proclaimed glory after they posed as an underage person and agreed to do all sorts of sex acts wioth adult males, and they are adults posing as teenager themselves. They make themsleves into liars by falsely impersonating underage persons and by not fuilfilling the words they tell the victims online in their chats. Why don't you read it where they tell these victims of their deceit about how they have been with grown men and such? Why don't you read it where they say, "That would be cool." after someone makes an advance towards an adult who is posing as a teenager? And, where they agree to meet the person, etc.
Lost control, didn't you?
Is that why you feel as if you need to lie so much now? I see where lots of these false impersonation games are not sticking. They feel as if they can lie and then order the victims to get counseling in the gayblade, governmental, pro-choice tax leech counseling centers. They are doing nothing more than usury and fraud in many cases." -- Wentzky almost comes out of the closet as a pedo/ephebophile in MID: <H%%Eg.28916$Uq1.22411@bignews6.bellsouth.net>

5015. Motorola TTE1752A amplifier specs wanted

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-15 00:39:11 UTC
From: Jesco White <no.m@il.as.yet.net>
Message-ID: <pan.2006.11.15.00.39.11.247922@jesco>
Source record: 6701

Hello All,

I am looking for any info relating to the Motorola TTE1752A, which is basically an RF amplifier on UHF freqs around 450-500MHz (I think!).

There is next to nothing coming up in Google, apart from the following: "
Re: [Repeater-Builder] Repeater Amp - TTE1752A

mch
Sat, 08 Nov 2003 22:10:02 -0800

Since I don't think you've received any specifics on this yet, I'll give you an educated guess... UHF 100W. I say UHF because the 'E' in TTE, if it follows the Motorola standard nomenclature, means UHF. I am not so sure about the 100W, but at least it gives you some idea.

Generally speaking...
A = Below 30 MHz
B = VHF Low Band (30-50 MHz)
C = Mid band (72-76 MHz)
D = VHF High Band (150-174 MHz)
E = UHF (406-512 MHz)
F = 800/900 MHz

Could it be out of an MSR2000? I don't have any manuals here at home or I might be able to tell you more.

Joe M.

Adam C. Feuer wrote:

Do you go by little-piss-ant on CB too?

Really, CB is a dead-end street, if you want to process further than the
rules allow, you have to be illegal. On ham radio you can do lots of
things legally. Learn CW, make something of your self. Don't be a loser
all your life.

5022. Heathkit HW-16 questions

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-15 04:02:19 UTC
From: k5dh@qsl.net
Message-ID: <UrudnbY_C7nWDMfYnZ2dnUVZ_s2dnZ2d@centurytel.net>
Source record: 6708
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I'm resurrecting an HW-16 that I picked up at a swap meet last month. I've gotten it working, aligned it per the manual, and the tubes are all good. Output power is about 45 Watts on 40m and 80m, and about 30 Watts on 15m, about what I expected. I do have some questions for you HW-16 experts to ponder:

(1) The receiver is the most sensitive in the middle of the VFO range, and the sensitivity falls off a lot toward the ends of the VFO travel, regardless of where I have it tuned when I do the alignment. All of the alignment adjustments work like the manual says they should. Any ideas on what might be wrong? I've owned HW-16s in the past and I don't recall this being the case with them (poor memory?).

(2) How would I change the audio frequency of the neon reflex sidetone oscillator? 1 KHz is too high for me. I'd prefer something around 750 Hz or so.

(3) The transmitter is chirpy. I know, all HW-16's are chirpy. I found a mod on line which suggests adding a 220 pF mica cap from the screen grid of the oscillator tube to ground to combat the chirp. I tried it, and I find that if I add capacitance there, the oscillator gets extremely sluggish. I tried various values from 100 pF to about 250 pF. Any thoughts on this?

(4) How can I increase the level of the spotting signal that's heard in the receiver? If I could bring it up high enough, I'd consider disabling the harsh sidetone oscillator and just listen to the transmitted signal as my sidetone, which is what I do with my homebrew tube transmitters and Drake 2B receiver.

Your thoughts on any of this would be appreciated.

Thanks and 73,
Dean K5DH

More than one k00k has gone on to win multiple awards after winning the GK, and look up "Edmond Wollmann", "Raymond Karczewski", "Richard Bullis", and "Richard M(orton) Scoville" for examples of what it can mean to win them. Usenet is not intrinsically "real life", but if you insist on making it that way, it will only be so for you. Mind you, in a group full of real-lifing stalkers, I suppose it's real for all of you.

Roger, I sent an email but would like to thank you here,
also, just in case you don't get the email. This info is
exactly what I needed--and didn't find in my quick google
search last week. I tried AD5X's version--it took about
ten minutes, all told, and when I was done the 706 once
again tunes up just perfectly on 15. THANKS, Roger!

5027. Q7 in Heath HD-1410 keyer

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-15 14:20:08 UTC
From: shoppa@trailing-edge.com
Message-ID: <1163600408.709740.269890@m73g2000cwd.googlegroups.com>
Source record: 6713

I was noodling around with my HD-1410 keyer while tuning up my Eico 720. Then the AC power had a brownout, and a bright orange flash and loud pop came out of the keyer. Opening it up reveals that Q7 is now a bunch of little pieces of burnt plastic. The keyer beeps the internal sidetone but now no longer keys the transmitter.

About a quarter century ago when I built the keyer, I remember something similar happening (except I think it failed shorted), and I seem to recall that Q7 is just a NPN maybe HV transistor, probably something like a MSA42. Can someone confirm this?

Tim.

Just took a look - I've still got a 1977 issue. Threw out the earlier ones when I moved around the countryside (RAAF Bases Amberley, Edinburgh, Garbutt, Laverton (now some other name), not in any particular order)

> I think the old days of truly making your own receiver and or

I can't do that anymore - book's too heavy, and my eyes get bloodshot. BTW, I still have William Orr's 1978 'Radio Handbook' as well. That's also good for a read occasionally, as well

Tim-

According to a diagram I found of the HD-1410, Q7 is a Heath 417-294.
This crosses to an MPSA42 Motorola transistor, per the cross reference at
http://www.d8apro.com/heath3.htm with specs shown as NPN, 300V, 500mA,
TO-92, 50 MHz.

Be sure to check Q6 (also a 417-294) and D5 (57-27, 1N2071).

73,
Fred

I know what you're both saying is true. Since ham radio has been dumbed
down I'm hearing a lot more Lids, Kids, and space cadets on the ham bands
too and radio's don't come with Lid filters. We need to keep CW and
increase the speed requirement to somewhere 13 and 20 wpm. We can't risk
dumbing down the service further.

Tnx, 73, Good luck in the contest.

Glad to help Dean-O....

> (1) The receiver is the most sensitive in the middle
> of the VFO range, and the sensitivity falls off a lot
> toward the ends of the VFO travel, regardless of where
> I have it tuned when I do the alignment. All of the
> alignment adjustments work like the manual says they
> should. Any ideas on what might be wrong? I've owned
> HW-16s in the past and I don't recall this being the
> case with them (poor memory?).

No your memory is correct - I am making the assumption you have noticed this on all bands. More than likely one of the 3595 khz xtals in the xtal filter has changed activity level - let's try bypassing it - run a wire between C65 and the point at C66/R39. You should get a much wider IF sig now. Now check your sensitivity at both ends of the dial.

> (2) How would I change the audio frequency of the neon
> reflex sidetone oscillator? 1 KHz is too high for me.
> I'd prefer something around 750 Hz or so.

You can try changing R64 1.5M to 5M. Remember T=RC so a lower resistance value should lower the osc freq. You might want to put a pot to adjust freq. To decrease volume increase resistance R63 - try a 1K to start.

> (3) The transmitter is chirpy. I know, all HW-16's are
> chirpy. I found a mod on line which suggests adding a
> 220 pF mica cap from the screen grid of the oscillator
> tube to ground to combat the chirp. I tried it, and I
> find that if I add capacitance there, the oscillator
> gets extremely sluggish. I tried various values from
> 100 pF to about 250 pF. Any thoughts on this?

Yea this mod has been a around a long time. It's really for lazy hams that don't know no better. Chirp is caused by B+ instability (I.E. Voltage drops when hit the key - No Volt regulation) sooooo look at the skezmatic - see how the ENTIRE transmitter's B+ is tied to Point B (310 VDC). Whose brilliant idea was this ?!?!?!

First thing to do is ISOLATE the oscillator V7. Disconnect the wire coming from C4/R3/R4 to Point B buss. Tie this wire to Pont A in the power supply. Skezzzzmatic shows that this is the B+ supply for the receiver. It only provides only +175 VDC but it's more than enough for V7 to oscillate cleanly at only a slightly reduced level.

The Point A voltage is actually pretty stable when transmitting. Because the 700 VDC voltage drop from R207/R206 and R203 to 175 VDC that voltage changes very little at this point.

Doing this mod will make the HW-16 sound like a Kenwood/Yaesu/Icom on CW.

If you want to make it sound like a Ten Tec - place an OB2 volt regulator inline with the B+ power wire. OB2 will take the voltage down to 125 vdc but it will be rock solid. V7 Oscillator will be a pure T9er. OB2 is a gas tube so its cold - solder a wire to input pin and output pin and stick the whole thing inside a shrink tube. you can then place it underneath the chassis... or you could punch a hole and put a tube socket near V7.

> (4) How can I increase the level of the spotting signal
> that's heard in the receiver? If I could bring it up
> high enough, I'd consider disabling the harsh sidetone
> oscillator and just listen to the transmitted signal as
> my sidetone, which is what I do with my homebrew tube
> transmitters and Drake 2B receiver.

Side tone level comes from Bias Switch Q1 which does not quite switch OFF the receiver - R49 10K - try a 10k trim pot and adjust level to your liking.

> Your thoughts on any of this would be appreciated.

No thoughts - I've done these mods.... and have many more...

Spot Button - One thing I REALLY hate about the '16 is the fact your have to key up the transmitter to find out where the heck you are on the receiver dial. This is what is called QRM - which in CW stands for interference - This reflects on a really piss poor HFE (Human Factors Engineering) sooooo...

How about mounting a DPDT push button switch. One Pole would be used to key up the transmitter from the key jack. The other Pole would be connected between C7 and PIN 9 on the V8 DRIVER. Now when you push the SPOT switch - it keys up the transmitter and also disconnects the input into the DRIVER/PA so it doesn't go out over the air. You will find that lil oscillator is plenty strong Side Tone and the rest of us don't have to hear you "trying to find yourself"

RF Power - Pretty crappy power control. You adjust the RF power by varying the B+ into the V9 PA. Pretty damn STOOOPID design - Here is a better way....

Disconnect and tie the wires from points 2 and 3 of the R13 Power Level POT point together. Now the V9 PA will be going at FULL BLAST at all times.

Now disconnect the wire from B buss to R6. Wire B buss to Point 3 of the Power Level Pot. Shot a wire from Point 2 of the power level pot to R6.

You have just duplicated the same circuit but attached it to the IPA. Now you can go from full power down to about 2 or 3 watts. If you increase R14 you can get it down into the Milliwatt range and still go up to full power with a twist of a knob. YEEEHAAA - HW-16 makes a great QRP rig!

Have fun and don't worry about screwing it - wadda going to loose $20-50 ???

Got a HG-10B VFO ?? Remove one rear plate on STATOR (Fixed) of the variable cap. A slight trim adjustment and your HG-10B Now has a expanded CW band. Yes you loose the top end of the ham band and you have to do more "cranking" to move around from end to end - but it's more accurately set and is more frequency stable.

You know, CW may be obsolete, but having to learn the code instilled a bit of discipline and sense of purpose in getting a ham license. Of course things like mathematics, science and such that require mental discipline are no longer politically correct so are generally not required in education today because we certainly don't want to bruise anyone's ego or tax their MTV indoctrinated brains. So, I guess the code will have to go.

It isn't so much the "code" being removed which has dumbed it down, it used to be you "had" to know electronics to get a license. Blame it on the Study Guides which really don't teach SHIT.

Personally, instead of seeing this CODE argument going on forever and not solving a damned thing, using the above post of the other necessities of life - if you intend to get anywhere - let's argue - and understandably so and more welcome than the code argument - why the classes are being dumbed down for our kids! Around here, the schools are wanting to build near professional sports arenas and I'm speaking "millions of dollars" - for the "Football" games - to hell with the studies. They "used" to give you basic supplies when you went to school, now you buy your own. The "School Board" seats are more hotly contested than some of the "State and Local" government seats. Yet the education level isn't improving.
No child left behind? Eh, not if they're foot ball players. IF NOT - they're screwed.

Just my 2 cents.

I know this is getting OT, but I agree. Ever see the stats on what the
school board people and administrators get paid compared to teachers?
Ever look at the ratio of school board administrative staff to
teachers? In New York some years ago investigative reporting indicated
that there were approximately 7 administrators per teacher and most had
"company" cars. Now we know where the money goes and why real
education doesn't matter.

Hi all,

I am transmitting in channel 3 of 802.11b, centered at 2.422Ghz.
Details aside, let me just say that it is very important for my
application that I sharpen up the spectral mask beyond that of the
802.11b standard. To be specific I need to purchase a bandpass filter
such that I get attenation of greater than 60dB at +- 15Mhz from the
center, i..e outside of [2.407Ghz, 2.437Ghz]. I am looking for
suggestions on where to purchase such filter(s) with the usual
parameters in mind, cost, lead time, etc.

I did see the filters that hyperlink sells, but it would take many of
their 8 pole filters in series to get what I need and they additionally
don't sell filters for one of the channels i would need. Maybe I need
to go custom on this? Any suggestions are greatly appreciated.
Thanks,

Kevin

5053. Wanted Collins 30L-1 Round

Hi, I'm looking for a Collins 30L-1 Round Emblem, High Frequency, Linear Amplifer. Not looking for any junk, actually I want one in excellent condition, Must be Round Emblem... Prefer one that has already been refurbished, things such as power supply, caps , etc...So as I do not have to do it...Although I've restored a few of them...I just want one in Excellent to Mint Condition...
If anyone out there has one of these amps, please feel free to e-mail me and if you like call 718-331-7427

Thanks a Lot
Carl

"guess you have forgotten the antics of the 80 m crowd all code tested"

Well, I guess this proves there are assholes in every group! You can't
beat 80M for this.

5059. CQWW CW Logger Program ?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-16 15:44:07 UTC
From: John <john_stlmo@yahoo.com>
Message-ID: <cH%6h.25$z01.22@newsfe04.lga>
Source record: 6745
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Looking for a good Cabrillo type logging program for the upcoming CQWW CW contest - logging each contact by hand and then transferring to a home made logging sheet gets kinda old pretty quick...

Needs to be in Cabrillo format for submission.

Any suggestions? Prefer free or small fee (under $50).

Thanks.

John

Regarding testing for a ham license, I think that is a good idea. I
just think we should be testing for skills that show some ability by
the operator to set up and operate a rig safely. And we should test
his ability to communicate effectively and courteously in a widely
used form of communication that can be understood by emergency
responders: voice.

I don't know about your area, but mine has two distinct tracks for
kids. Those that are headed for a college education receive various
levels of advanced classes based on ability (more or less). Those that
are on the vocational track receive math and english at a level to get
them past NCLB requirements and the equivalent of shop classes. The

stadiums are for the most part outdoor with bleachers looking over a multipurpose playing field that has a running track around it. And this is one of the higher income areas of the country.

I do agree that sports in high school and college can be taken to absurd levels of importance. In many locations, especially urban ones the high school is essentially a farm club for colleges which are a farm club for major league sports. I would love to see the system taken back several notches but there is too much money at stake for that to happen.

Sorry I mispoke earlier. Let me restate this. Hyperlink has an 8pole
filter for several of the 802.11b channels that has the mask -3db at +-
10Mhz, -5db at +-15Mhz, -20dB +- 20Mhz.

Essentially I want to keep 2.417 to 2.437 Ghz, so one of their filters
centered at 802.11b, channel 4 would be ideal, except that they only
sell centered at the standard channels (channel 3 and 6 are the
closest), so in short I was wondering if anyone knows of a vendor that
sells such a filter centered at 2.427Ghz. Thanks for any suggestions.

That looks like you'd have to call them for a custom version which will probably be lots of $$. Or roll your own which requires a lot of RF/microwave knowledge. Or hire a consultant :-)

Problem is, if you are most likely the only one needing this there won't be an existing market and chances that any other company has the right product could be close to zilch.

Regarding the "education". They teach "some" college level prep classes. As to those with lesser ambition/grades, they have "classes" - period. There is "Vo Tech" - but you had to have a certain grade average to get in "there". As to shop, one school I know of - sold all their shop equipment years ago - that being the same school "I" went to and got my start in electronics training. I've never heard much of other schools having "shop" class around here. The "stadiums" at some of these schools here reach into the "millions" of dollars, upping the taxes on all who live there. Those stadiums are damned close to being equivalent to a "Pro" Field. Hell, our local "state" University doesn't even match some of them. That is pathetic. Yes, kids need sports to teach sportsmanship and competition, but come on - "EDUCATION" being "reading, writing, arithmatic" and so on are more important. AND as I said, they fight for school board seats hotter than some local and state government races. It is "sickening".

They've eliminated the "Wood, Electronics, Metal (including welding) and Electrical" shops here. Now, I realize "Electronics" may not be as hot to some as it once was, but it still has value in our country. So too does "Electrical" systems/wiring, "Welding", etc. Do we not need "skilled" labor

anymore? No wonder this country is going to hell. Pretty soon all other countries will out smart us in every field. Those who were pushing "no child left behind" - need to get things back on track for "develpment" of "marketable" skills."
We're still going to need things wired, welded, soldered, electronics to mainain the "cell phone craze" and so on.

I realize most parents are working and unlike the past - at least one parent made sure we did our chores, studying and so on..... things have changed dramatically. They need to change dramatically again. Get these kids interested in something. Even computers seem to be falling out of grace with a lot of them - aside from chatting. I guess they equate computers to "work".

5066. mts2000- programmable scan?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-16 22:42:28 UTC
From: c454785569@gmail.com
Message-ID: <1163716947.984788.112900@k70g2000cwa.googlegroups.com>
Source record: 6652

I just bought an MTS2000 radio (VHF 48 Ch. - H01KDD9PW1BN) and am wondering if the scan list can be user programmable.

When I brought it to Motorola for programming, they told me I had to provide them with the scan list for each bank because it was NOT user programmable, however the information on the following links shows otherwise.

http://www.montcopa.org/eoc/EDS/RadioSystem/Training/MTS-2000%20Program%20Scan.pdf

Any thoughts?

Thanks!!

5067. Yaesu VX-150 Resetting it's memory periodically

Hi, I have a VX-150 that's 1 month old. It periodically resets it's memory.
Initially I thought it was to do with the power in my truck.
However this is not the case. It has done it even without the power connected.

Anyone have Ideas?

The most user friendly program is at www.n3fjp.com
It's a great program, user friendly (don't even really need to read the help files to get started), automatically checks for duplicates, allows monitoring the online DX clusters if you are so inclined, allows rig control if you are so inclined, allows keying the radio from the computer if you are so inclined, creates Cabrillo files for contest submission and adif files for importing into general logging programs. There's other neat features but that's a good start. It is also quite inexpensive.

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.

Right, That why there is CB. You don't have to know how it works you just
get on it and act stupid. We can't have ham radio be like that, we want
skill. Quality, not quantity.

I know a lot of you don't like that because it means more work, but we get
a higher quality operator.

Definition of Political Correctness:

A doctrine fostered by a delusional, illogical liberal minority, and
rabidly promoted by an unscrupulous old media, which holds forth the
proposition that it is entirely possible to pick up a turd by the
clean end.
////////////////////////////////////

Hmmmmmmmm

Not unlike what Katie Couric and Matt Lauer do on a daily basis. Or, for
that matter, what CBS, NBC, ABC, and CNN do daily.
When a Republican goes awry, the Media plasters it on Page One. When a
drunken Democrat does so, the Media lauds the Democrat for "getting help"
and calls it a "Courageous Step."
Chappaquiddick, anybody? Mary Jo Kopechne ring any bells?
Now, when it comes to "picking up a turd by the clean end", which end would
that put Senator Kennedy on?

N1MM's LOGGER program... Can be used as a simple logging program.. But
has all the bells-n-whistles you can imagine (and some you can't) if
you want to use all its features... Has a community of users who will
help you and a chat group...
And is free - not shareware, or pay me later - f r e e ..... Go to:

http://groups.yahoo.com/group/N1MMLogger/

enjoy - denny / k8do
<who has used most of the logging / rig control, programs out there, is
a life time subscriber to TRLOG, CT. and others, and N1MM is among the
best...

XPost & Fup to rec.radio.amateur.misc.

My first choice (for single OP, unassisted): CT(Win) by K1EA,
available at http://www.k1ea.com/. It's free, easy to use and
offers all features you'll need to get started. Saves the log in
Cabrillo format, export to ADIF possible to import it into your
general purpose logging program.
CT is one of the most used contest loggers for many years now,
for a good reason.

More advanced: Win-Test (http://www.win-test.com/). Not free, but
worth the price, if you need the rich features it offers.
Especially great networking capabilities for multi-operator
environments (probably not important in your case), good SO2R
support etc.

Other free Contest loggers: N1MM (Mentioned in another post. It
works fine, but it's a bit too bloated for my taste.), SD
(http://www.ei5di.com/ similar to CT).

Hope to meet you in CQWW, I'll be Single OP Allband High Power
with SO2R (using good old CT).

73,

I agree that N1MM is very good. For a beginner in computer logging of contests, it has a steeper learning curve than the N3FJP programs. While you do have to purchase the N3FJP program, it is so easy and intuitive to use that it is great for the inexperienced. I will admit N3FJP doesn't have quite as many features but it does do all the basic stuff (basic rig control, dxspot access, etc). Again that makes it good for contest beginners.

Here is my list of preferred contest logging programs in order:

1. N3FJP if he has one for the particular contest.
2. N1MM when there is not an N3FJP program available
3. GENLOG when neither of the above has a program or module for the contest.

Get used to the QRM, because after CW is eliminated you're going to wish
your rig did come with Rettysnitch and wouff hong filters...

But I forget, due to the lack of support for good tests a lot of you
people must like hearing Lids.

give the yaesu tech's a call maybe they can walk you thru something

try a master reset on the radio

i had a ht (not yaesu) that did that it was the little battery inside
not makeing good contact

hope this helps at least a tiny bit

Source record: 6679

Hello!
I want to buy a new handheld. I was reading the reviews and user opinions for the last few days, and I still can't decide which one is the ONE. Please if you could help me. I know that both(F7E and VX7) have very good 2m/70cm TRX. I don't really need 6m. But I can't find which is better in other (ham and non-ham) bands? Which has better quality build, sound, hardware, software...? Reeception in bad conditions?etc.
As I can see both are "old" models(from cca 2001-2002). Are there plans for newer models from Kenwood and Yaesu soon?

Thank you

That IS correct, the SCAN can be set for user programmable or programmed scan list.

I use the rotory switch for Talkaround, DIRECT, and one of the side push buttons to enable SCAN and with a long press goes into scan programming using the "delete" button.

Good point, Yes, very good point.

No-coders must go to the end of the line for refreshments at meetings.
Code hams must be served first and should take more treats than they want
and need. When all the code hams are served and there is nothing left,
no-codes get the left-over Coffee grounds and Cookie crumbs. This will
teach no-codes that by working harder to be better hams, they will not
only get more radio spectrum, they'll also get treats at club meetings and
won't have to sit on the floor with an empty stomach.

No-codes can still dig their treats out of garbage cans and toilet bowls
if they wish, but they'll have to share them with any CB'ers that might
also be at the meeting.

1) The king (Soloman) never cut the baby in half. He directed it be done in
order to find which of the two women's baby it really was (the real mother
opted to give it to the other woman to save it's life.. so Soloman gave it
to the real mother.)

2) Soloman was widely (and is still) revered as the wisest of kings.

There's a downside to the N3JFP logger Dee - the country files
(CTY.DAT) are only irregularly updated and I haven't found a way to
update them before each contest via AD1C's service.

Wouff Hong ???
Rettysnitch ???
WTF are we in the 19th Century here???
Baaaaaaaaa hahahahhahahahahhahaha!!!!!!!

Jeezus H Christmas on a rocket powered sled at the Nevada test site
will you OBSOLETE hams PLEASE join the 21st century.

I mean consider that the terms Wouff Hong and Rettysnitch
DO NOT even appear ANYPLACE on or within Wikipedia!

That alone should tell you something! (..of course now you
can be some crusty old fart, cloistered ham radio nerd or
some asshole who took the "Bash Book" route to get his ham
license will now dash up and create an entry in Wikipaeda
just to inflate his own ego and asscheeks and claim he did
something.....go ahead, be my guest! In the meantime I'm
heading back to 20 Meters to have some fun with the contest
freaks. I made up a callsign and semi-rare section and these
CLOWN-testers are beating a path to my speaker to work me
just so they can see their callsign in print in some half-ass
magazine from CT. How F-N pathetic!) ---> PFHBLTTT!!!!!!!!

ps: you should have seen how many DX clowntesters I duped
a few weeks ago using a "creative" callsign, section and running
10 watts into the 40M dipole instead of the beam...suckers!

I don't think this is likely since you would need an A/D samping around
a megahertz, which isn't stock hardware on a PC. There are SDRs that
will give you a panoramic display on your PC.

I'm not certain to which group I should post this question, so I'm shot gunning hoping to find it. If anyone can point me, please do. However.... Has anyone used the HP 3582A audio spectrum analyzer to plot the freq response of audio devices like mikes, speakers, etc. Knowing the mike response I'd like to see the spectrum of plucked guitar strings and their harmonics and see how different manufacturers sound varies in a plot. I got a 3582A at a swap meet, its complex and probably overkill but that's what I have and I am anxious to try it out and would appreciate any tips.
Thanks

If you mix the 455 kHz output to 10.7 MHz, you could use the AOR display.

Probably was used for driving a bank of TVRO receivers from a single LNA
at a cable TV head end.

Well, I'm excited about learning code. I have been given some great
websites for practice. And I'm going to try to test in January 2007.
I don't know if I can be ready that quick - but I'm going to give it a
shot. Also, I have been encouraged by several hams to learn the
sounds as complete thoughts instead of learning just letter
recognition. A bit like learning to read, I guess - so I will try that
method. Thanks for the hints.

The 3582A is just one of many two-channel FFT analyzers which can be used
to measure the frequency response of a system (output re input). What
specifically is your question? Perhaps all you need is to get an operating
manual and learn how to use it?

However, it is often a good choice for the person who has never used contest
software before due to its intuitive interface. All the other software that
I have experimented with takes time to get familiar with.

I'm using the AVCOM SDM-42B display with my RX-340...to use this unit
you have to have the accessory 45 MHz IF unit installed which then
interfaces with the 1st wideband mixer output at 45.455 MHz. I THINK
the low end of the chain at 455 Khz may not be wide enough to give you a
decent display width. Usually run the display with a width of about 100
KHz which lets you see lots of signals (and some birdies too
unfortunately). AVCOM has software that when connected to the SDM will
display the same info on your PC. The software was originally intended
for their spectrum analyzers so many of the measurement functions do not
operate with the SDM. I/O is thru a serial port--they used to have an
accessory adapter that interfaced via the PC's parallel printer port but
I could never get it to work until they upgraded my unit to a serial
I/O. The communication with the PC is only one-way so you couldn't
control the RX-340 with this unit even if you wanted to.

Be advised the unit is pricey (even after they significantly reduced it
a year or so ago) and support for that unit is VERY low on the company's
totem pole of products....but it sure is nice to be able to see the band.

As far as I know this is the only hardware spectrum display unit you can
use with the RX-340. The AOR units have only 10.7 MHz inputs. BTW,
with the 45 MHz converter installed you retain the use of a second
channel at 10.7 MHz for another receiver -- I've got the Icom R7100
hooked to that port so the SDM-42B supports both radios.

Check out the specifications of a new receiver coming in January from RF Space: www.rfspace.com/sdriq.html

A feature of this new receiver is the ability to serve as a panadapter display for other receivers via any IF frequency within the HF range (455 kHz qualifies). I'm thinking of getting one for the 190 kHz RF recording capability, so I don't tie up my SDR-1000 while DXing. The SDR-1000 needs to be left on a single frequency while recording a swath of RF.

The SDR-IQ's price is $449 (receiver, software, no enclosure), and $499 (receiver, software, plus enclosure).

Another option, FWIW, is to use the PC to capture and analyze. The audible spectrum would seem to be quite unchallenging for common desktops. Compression schemes such as MP3 and WMA, after all, operate on the frequency domain. In fact, Windows Media Player delivers the FFT stream to visualization modules. There's likely free software somewhere that can do what you're looking to do. OTOH, you then have the soundcard's non-linearities to deal with, which is likely not on par with lab or even studio grade equipment.

There are studio grade PC audio interfaces, and some are among the
highest-performing audio components around. Some are on a par with the very
best lab equipment.

There is free PC software called RMAA that will automatically conduct a
representative suite of audio tests, and produce reports in a few minutes:

Yes, lots of people have used HP FFT analyzers for all kinds of things.
There isn't a lot of trickery... they pretty much work.

One thing which you can do with these older analyzers is measure much higher voltages than possible on a sound card FFT, much lower frequencies -- they were used for vibration analysis as well as audio -- they are also very well isolated -- you can find a repro of the manual on EBay for ten bucks.

Easy enough to address. I use a 5K RN50 potentiomenter for the purpose. If I want an accurate voltage measurement of audio, I use a voltmeter.

> much lower frequencies -- they were used for
> vibration analysis as well as audio

Not much difference between most vibrations and what a subwoofer does. If an audio interface is flat within 0.1 dB at 20 Hz, then it is pretty good an octave or two below that!

> -- they are also very well isolated

There is this amazingly good audio isolation transformer at Radio Shack. Sells for under $20 a pair...

> -- you can find a repro of the manual on EBay for ten bucks.

You can find an audio interface that will outperform say a HP 334 for $30. For $200 you're in the same league as some of the older, but not all that old AP stuff.

I just joined this group, thinking I would get in on quality radio
discussions. I didn't realize I had mistakenly joined a bunch of
juvenile males interested in only out-dissing each other . Are any of
you serious about radio?

Very few, it seems. It's just (yet) another originally interesting n.g. gone to the dogs...
Well, that's what you (we) get from non-moderated groups...

well thats WHERE the problem lies, if the retards would keep the thread in
the Ham Radio NG things would be fine. After reading (a few of) the
messages, it makes me wish ham radio would die out. They complain about
'qual;ity' operators and CB'ers but then they get
here and act worse that the worst. And yes I'm cross posting this message so
that ALL the
ham radio retards can see it, with the hopes (but it seems these shit
stains have NO CONSIDERATION for other people) will STOP cross posting to
NG's that have no
bearing on their 'debates'

Quite a few of us are but we have been invaded by the idiot squad lately. A carefully made kill file will solve the problem and make the newsgroup much nicer. I have a friend who is writing a patch fpr IE that will allow you to kill entire threads according to whom initates it. I will make it available as soon as I get it. Most of the juvenille behavior is a result of those with no true interest in amateur radio, they just want to stir the pot and be heard kind of like those who yell obscenities on the air just to hear peolpe respond.

and I still don't think Woger knows the material on the test.

At least N0VFP and N9OGL don't get into bad moods and try to destroy the newsgroups when they fail. Woger can learn something from them, but he's chooses Markie for his mentor. It must be a gay thing.

No, No, No, You are all Heathens!!!!

I know the Bible. I read it every Friggen day while I listen to Code. My
favorite Bible passage is an End-Times passage and I'm actually mentioned
in it. It's found in First Hiram Chapter 2, verse 73:

"and Slow Code, servant of the Lord, smote the Lids with his
cattle prod and the Lids were healed. All that saw were
amazed and fell to the floor and gave thanks to Slow Code
and the bands were made clean that day, and many CB'ers were
also converted. And they began preaching and speaking in CW"

Good luck with it. :) We love helping people that want to good hams get a
license. That's a good point on learning CW. As you get better and
faster at it, you don't hear individual letters, you hear and your mind
memorizes the sound of whole words.

Markie will probably flame you for wanting to learn CW, but just ignore
Markie, he's a retard.

I found this in the swap group. All you good hams might want to
subscribe, the rest of you like Markie, Ham-and-Cheese, and U-Know-Who
will probably try to crap on it.

I can't believe a ham would ask this question. Everyone complains about having to learn CW, that they want to modernize and shouldn't have to learn it, but when they hear a more modern mode that they should know what it is, they don't know it.

It's just like I said, Hams just want an easy license they don't care to modernize. If they did care they would be modernizing. Radio teletype has been around a long time, if they're too lazy to do CW, why aren't they doing teletype.

If we still had a real CW test, people would study theory more and know what they're hearing. But Nooooo, we can't have real radio tests.

> really want PC control of the RX340, just a spectrum display. Thanks.

I bought a spectrum analyzer at a hamfest that I use as a panadapter
for my RX340. Usually it is connected to the first IF (45.445 MHz),
and I use a broadband amplifier to bring the very low-level signal up
so the spectrum analyzer can use it.

I haven't found the other IF outs to be all that useful for a
panadapter.

BTW, I paid about $200 for the spectrum analyzer -- it's not all that
expensive a way to go.

5171. Question about receiving broadcast (AM/FM) radio

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-22 17:33:26 UTC
From: nospam@nospam.com
Message-ID: <ek21l6$81d$1@reader2.panix.com>
Source record: 6557

I realize that this is the wrong sort of "radio" newsgroup, but I cannot find any newsgroup dedicated to consumer AM/FM receivers. I figure you folks would have opinions on the relative merits of digital vs. analog tuners.

Which is better for pulling in a weak, distant radio station: a top-of-the-line analog tuner, or a digital tuner with quartz crystal oscillator, phase locked loop, etc.?

I am seeking a "good portable radio". None of the portables that I have owned have been able to pull in weak stations as well as my no-name car radio. Now, according to what I was told in some courses over a decade ago, I thought the "best" radio receivers used a quartz crystal local oscillator and phase locked loop to "lock on" to the received signal. However, the high end radios people have been refering me to (like the Tivoli Portable Audio Lab) have analog tuners. I have to admit that part of the charm of a digital tuner is the laziness it allows: key up 1340kHZ or 91.5MHz and you're there.

I doubt that my no-name car radio was expensive even when the car was new. There should be a portable radio out there that works at least as well. Any recommendations? It wouldn't necessarily have to have a speaker; headphones would be fine.

Hi, Paul,

Believe it or not the best receivers seem still to be the old-fashioned analog tuners, partly because of an inherently lower phase noise level in analog tuners and partly because a couple of manufacturers have put some great engineering into putting out really good portables.

One is the GE Superadio which always gets great reviews everywhere, and the other is a little-known Radio Shack Chinese clone of the Superadio, their catalog #12-903, which I believe is a little bit more solidly built than the GE and closely approaches its performance.

Any portable with a jack for an external antenna is a plus because you can run a lot of wire outside an bring it in through a window. This is much better than even the large 8-inch ferrite rods in the GE and Radio Shack. (Both models have connectors for external long wire type antennas.)

My recommendation is to stay away from the Sony ICF-SW7600GR which a lot of people like because of its digital tuning and synchronous AM mode but I have one and there is no comparison between it and the RS 12-903, for example. It eats batteries like nobody's business and doesn't sound as good as the RS. One of the other big advantages of the GE and RS are their beautiful audio quality thanks to well-designed wide IF bandwidths and large speakers. And you can expect your batteries to last more than 200 hours!

Another word about synchronous AM: on the Sony mentioned above, it does help on a moderately noisy signal but it raises the phase noise even higher compared to normal AM mode. In addition, on the very weakest signals near the noise floor Synchronous AM isn't effective at all because it needs a minimum S/N ratio to work properly.

One last model that you may hear discussed is the CCRadio Plus. I wrote a review of it on Amazon.com which was later pulled for no apparent reason although some other folks claimed that the manufacturer had pressured amazon.com to reconsider any negative reviews of the product. Whatever happened, I had some solid engineering data in that review to support my opinion that it was a mediocre receiver, certainly not the stellar product that the ads claim.

Sorry for the extra long post. Good luck in your decision and enjoy AM DX'ing.

Regards,

Al W6LX

5174. Re: Palstar AT Auto FS

Selling my Palstar AT Auto, three months old, has Version 1.01, all accessories in factory box. Asking $955.00, shipped to mainland USA, or picked up 23323, $900.00 FIRM. It works well, but just didn't fit in my antenna systems to my satisfaction. 160 M using OCF, 75 & 40 M using G5RV/OCF/Loop, 20 M to 10 M using a MA5B beam, 6 M a 5 element beam. Pro3 & Pro2 through PW-1, RF generators.
Now using dedicated AT1500CV for 160, another dedicated AT1500CV 75/40 and the PW-1 auto tuner has little task into resonant beams on 20-10 and 6. Three antennas on 75/40 puts too much memory match on the software and a lot of computer interfacing without antenna data input. Beautiful tuner for a basic transceiver/amp/2 antennas station.

Is the GE Superadio III as good? (Sometimes the model name stays the
same, but later versions aren't the same product at all.)

I understand the merits of big antennas, but the whole idea of a portable
is that you can pick it up and take it to the office, lab, etc. without
having to get permission to string wires. Do these radios come with some
sort of default antenna (like the traditional telescoping chrome rod)?

Is there anything similar to the GE or Radio Shack that gets shortwave?
More to the point: In the middle of the continental US (Colorado), can
I pick up international news in English? Someone told me once that the
BBC was going to stop its shortwave broadcasts for the US because we
weren't offsetting the cost.

Shortwave wasn't part of my original interest, but I got curious after
one guy claimed that any shortwave radio has to be better quality than
a mass-market AM/FM radio.

rec.radio.shortwave is the proper group, it's intended for any distant
listening of radio stations, not just shortwave. (THis isn't a
retro-definition, it was there from the start and "shortwave" just
seemed like the best way to name the group.)

You have to "define" best, when shopping for a radio. In a lot
of consumer equipment, the radio sections are an afterthought, and
certainly not intended for much beyond local stations. That's what
most people are interested in, if they even care about radio, so
there's no real incentive for manufacturers to design good radios.
So if you ask for "best", it may turn out that the salesmen are
thinking in terms of sound or some other function, when you are
talking "radio that is good at receiving distant signals". And cost
isn't necessarily a factor. Since an expensive stereo receiver may
be sought after for sound and features, the cost may not be reflected
in the radio. Of course, in the past, there were some very good
stereo receivers with good reception qualities.

I once got into an argument with someone about their having a "good FM
receiver" when it turned out to be a portable shortwave receiver that included
FM. They thought since they'd paid a lot for it, the FM section
is naturally good. But the FM section would not use any of the circuitry
from shortwave section, so it was a "feature" added to sell more radios,
and the designer likely wouldn't have allocated much to the FM section,
since it would raise the cost or reduce the shortwaver performance.

Car radios have traditionally been good because of the environment
they are operating in. One minute they could be near a radio station,
and if they overload then that whipes out the other stations. The
next, they could be way out in the middle of nowhere, where all
the stations are distant. Or a combination, where you need to separate
out a strong signal from a weaker signal. So car radios traditionally
were designed better. An rf stage at the antenna, better selectivity
in the intermediate frequency.

Meanwhile, other AM/FM radios have pretty much kept the same design
for decades, with very little innovation unless you get a really expensive
radio. And since the "standard" design doesn't take into consideration
much beyond local stations, there's no incentive to change.

If this was for a non-portable use, the cheapest solution would be to buy a car radio at a garage sale for a few dollars, power it up with a power supply, and there you have it. A relatively decent redio for a few dollars. I've had a Delco digitally tuned radio next to my bed for a decade, and it's pretty much the best AM/FM radio I've had. Certainly on FM, it beats anything I've tried. (And if the need is semi-portable, get a speaker in a cabinet and strap the car radio to the top.)

Most people never tune the bands to try for those distant stations, so they don't get an idea of what might be better. Distant AM stations at night are easy to receive, sensitivity isn't usually an issue. But separating them out may require something better. On FM, distant stations often require good radio conditions, so no matter what the radio, you will need height to get a distant station on a regular basis. But an FM receiver's ability to stand up to strong signals is important, because too many low end radios (and the expensive units that don't spend much on the FM radio) overload from strong signals. You can never hear the weaker signals, even when they are receivable, because the local signals overload the receivers and mask the weak signals. But here again, better selectivity becomes important, so you can hear the distant station that's adjacent to a local and far stronger signal. (And in the past, when radio was more important, there were high end receivers that dealt with this, having two selectivity positions, one for normal reception and a narrower one for when a signal was weaker.)

Digitally tuned radios mean you are more likely to check those distant stations. Keep the local stations on the memories, and then tune around the band, knowing you can easily get back to the locals. Or when conditions are good, when you find a station pop it into a memory, so you can tune about while waiting for an identification on the first station. There are some FM stations here that are just over the horizon, and are receivable sporadically, and since I like the stations, I keep them in memory. It's really easy to check them, so I am more likely to check them. And digital readout makes it far easier to know what frequency the station is on (which helps to identifiy it's location.)

Analog tuning has the advantage that when trying to deal with a weak signal adjacent to a stronger signal, being able to tune around a bit can sometimes help to separate the stations. You don't have that ability with digital tuning. Again, some of the better stereo receivers in the past included some odd (and I have no idea how successful) designs that tried to compensate for this, trying to give the best of both worlds). Or things like shortwave receivers allow for finer tuning steps. They'd allow 1KHz steps on AM because that's needed for shortwave tuning and the AM section is usually part of the shortwave section. And if they include FM reception, they might have 50KHz steps instead of 200KHz steps, to accomodate different standards around the world, but which incidentally allows for finer tuning on FM.

One of the BEST things I have seen to improve AM radio reception is the Select-a-Tenna (http://www.selectatenna.com/). Tune your portable radio to the frequency, place the Select-a-Tenna next to the radio and adjust the Select-a-Tenna for best reception. No wires to connect, no batteries or power to plug in to. There are now other models of Selectatenna that are powered or can connect with wires to you receiver but I have been using one for years on a very inexpensive portable radio and I can pick up stations loud and clear that I couldn't even hear without it.

I am not affiliated with the company that makes them, nor do I sell them. I just have one and am impressed with its performance.

Please note this is for the AM broadcast band only.

It sounds to me like you have it all covered. One extra thing you can do is just have it send random words for about four or five minutes, then people can check their copy with what was sent.

Also, make sure it can send code up to 20 to 25 wpm. Some people might want to practice to be real hams.

You need to know how to use both well in order to be a skilled
communicator, otherwise you're just a CB'er with a piece of paper.

Pete
I saw it and got it several days ago but I sure can't make the thing work
like a spectrrum analyzer. And I know how to use a HP 141T and its plugins!
I don't think there's anything wrong with it as it behaves per the manual
Any other help appreciated. Perhaps someone has used one for music study as
I want to.

5 Radio Frequency Interference Ferrite (RFI) Reducers for Round Cables

Cut down on RFI (radio frequency interference) with this effective and easy to use clamp-type split ferrite choke core. Simply snap it over any coax cable, AC or audio cord.

Features/Specifications: Split ferrite RFI reducer for round cables
Clamp-type fitting
Uses high-performance ferrites (Nickel-Zinc) that reduce high frequency noise
Split ferrite assembly are fully enclosed in a Nylon case
Can be installed before or after product setup and assembly

Package Includes: RFI reducer for round cables

Product Requirements:
Suitable round cable

RFI filters can be pretty important when cables are run through big bundles of other cables or near strong power supplies. Put this RFI reducer on your round coax, AC, or audio cord to improve the signal quality. This Radio Frequency Interference Reducer is made with high-performance ferrites (Nickel-Zinc) to ensure a better filter process. It is small, only 1.2 inches long and snaps on in an instant.

Do any of you no-code lids remember the demonstration on Late night TV
when a couple of CW ops demonstrated and proved CW is MUCH faster than
"text messaging?" Yeah, it';s slow if you are a 5 WPM lid that has no
pride in themselves, but for REAL Hams it is efficient, and fast.

Why are these no-code idiots so DEFENSIVE? They're winning! What have these morons got to have an attitude about? It's us REAL HAMS...us CW operators that should be slinging the mud. All they have to do is be conceived, then try to figger out how to push the mike button now and...voila...they're so-called "hams." And the puff bags in Washington and Newington have handed them all the spectrum to use for their CB operations.

SLOW CODE...keep at it. I think your comments are right on the mark.

Hi Hank,

This unit should operate like any other spectrum analyzer. Make sure that
you have it for recursive operation. This button is just above the "ARM"
button.
It took me a little while to figure mine out too.

Send your spec to these guys, they should be able to help you or at least
tell you whether it can be done. I hope you can afford their products.
Their tunable notch filters are very nice and might be one way of avoiding
a custom design, though I don't know if they cover your frequency.

10 signals are obsolete and are being officially dropped by most police
departments in favor of plain English. The announcement has been all
over CNN and FNN. Apparently, police professional organizations and
Homeland Security have recommended that 10 codes be dropped, and most
police departments are about to comply.

The use of 10 codes will now be the offical mark of a backward operator,
just as we have always known.

They don't like to be reminded about that contest. It shows the
difference between skilled and un-skilled. It also gets back to that
liberal political correctness thing. Everyone has to be equal, since not
everyone is good enough to rise to the top, they got to drag the top down.

5215. TH-F6 Swollen Battery

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-24 05:10:53 UTC
From: K1LTJ <apmatthews@comcast.net>
Message-ID: <1164345053.144374.169550@h54g2000cwb.googlegroups.com>
Source record: 6501

I have a TH-F6 which I have had for about 2 1/2 years. It has been very well treated, and care has been taken to treat the battery properly. I noticed that the battery would no longer hold a charge. I tried to remove the battery, and it was extremely difficult. It turns out that the battery was slightly swollen, and pressing against the HT case. LI-ion batteries trouble me a bit. I have seen some explosions and fires in RC aircraft using them. I wonder if anyone else has had a similar problem with the PB-42L stock battery with the TH-F6?

Al / K1LTJ

I just looked up "lid" - a poor operator, one who does not follow proper procedures or sends sloppy Morse code. (Not me on either count. It's a silly insult to throw around when you don't know somebody.)

Moderator, can we rename this thread? I think "Mode Rage" sounds right.

(If it keeps going, I can claim that you're not real hams if you don't do Amateur TV at 1.2 GHz. Then what?)

There is no moderator here. Mark, however, considers himself to the de-facto self-appointed Knight-In-Shining-Armor/protector/moderator who defends no-coders against the onslaught of us pro-coders. Of course it is worth noting that Mark is the only no-coder in this group.

Mark has not mastered the art of even 5wpm and stubbornly maintains that he will never do so. He posits that he should be handed a General or above license because he feels CW is outdated. This from a guy who cannot author a cohesive sentence and who, despite many freeware spell check programs, refuses to make an effort toward rendering his third grade level disjointed posts readable.

Mark continues to assert that he is trying to clean up this newsgroup (rrap) while in reality his fifty to sixty (often more) daily posts have driven many of the previous Hams away.

When Mark blundered into this newsgroup with his trash, it was the old cliche', There Went The Neighborhood.

Of course Mark will have to comment. As Slow Code has previously noted, Mark simply cannot let a post go by without crapping on it. As always, Mark will change the subject line.
Sorry, Mork. I won't read your response. I no longer read the fifty to sixty posts you change the Subject line on.

The purpose amateur radio is communications. Real HAMs can communicate with CW and they also speak English, Spanish, and French. Those who can only speak English are stupid, idiots, turkeys, and are only wimpy HAMs. Real HAMs are also a little narrow minded, intolerant and arrogant. If you are one of those open minded and tolerant people you are not a real HAM and you are probably a liberal, left-wing, homo-faggot.

Dean -

I have a Shure Model 450 in NOS condition (plug has not even been wired onto cord)
Uses a magnetic cartridge and has switchable impedance (Hi/Lo). Here is the Shure data sheet on it.

Why am I wasteing my time brushing up on radio & electronic theory and studying schematics when, apparantly, all I need is better cw skills to enable me to fix my radios.

I have the following for sale, not auction. All Radios are working unless stated.

2 - Uniden SPU51KT, one with battery, no antennas, one has broken ON/OFF switch

3 - EF Johnson Model 242-5876, no batteries or antennas. FCC ID # ATH2425876 - all power up and TX/RX

1 - Uniden SPU416K, no battery or antenna, works fine.

Photots of all available upon request, asking best offer for all units or consider trades.

Electronic / RF parts/Connectors

31 - PCB mount SMB jacks - gold NEW
15 - SMA Nickel PBC Mount Jacks
2500 - Diodes Inc, MPSA42B-XN TO-92 transistors
40pcs - C&K 7101 SPDT PCB Right angle toggle switches
1080 - MIL SPEC JANTX2N2369A Transistors (metal can) NEW
10 - MACOM P/N 5862-5004-10 PCB MOunt RF connectors
1 - Dynatech FSCM 50667 / Qx6-618K002 - SP6T SMA to SMA coaxial Relay NEW, 20-26VDC, DC to 26.5GHz

Best offers (MIL SPEC parts, semi-rare). I accept PAYPAL or MO. Company checks. Photos upon request. Let me know if you need more information.

Hi,

I have purchased a number of TM8110 Radios. At present I am designing the interface between a control unit and the Tait Radio (Serial Data) but I cannot find the pinout and information regarding serial coms via the 15 way auxiliary connector at the rear of the radio. Does anyone have a pin out for this connector and any description of serial communications ?

Thanks

Regards

David

Trying to use a PC as a general purpose bench instrument is like the old race car guys that I used to hang out with. They would build a new big block Chevy and a Turbo 400 behind it every couple of seasons. They put in a dually one ton truck and pulled a trailer that would have been just about right for an old single axle B Mack around for the season. They got about five miles to the gallon under load too.

When I got older, I'd ask them why they didn't buy a real truck, you know, air brakes, Fuller Roadranger, like a used Yellow or Roadway day truck. Well, license and insurance cost too much and you needed a "chauffeurs license" to drive it. (Those pre-CDL days!)

Well okay, at least put a diesel and an Allison in the pickup, why don't you? Because we don't know how to work on them and you can't get them in the junkyard for a hundred bucks.

Eventually they got tired of building "motors" (sic) for the tow truck and not the race car and put a 3208 Cat or a turbo 4-53 and an Allison or a Clark five speed in there. They then got like ten miles to the galllon and the truck rusted out twenty years later and the engine and trans still ran.

The PC does okay as a controller or as a dedicated production test box with a buffered, isolated interface. But it is not like a scope or gen or analyzer that sits on the bench.

If it won't take a charge it's probably past that danger point, but
OTOH was probably close to it about the time the swelling ocurred.

As does the HP /Agilent Infiniium. As long as you use no other
software at all it works pretty well, but QNX would have been a very
much better choice.

Is this a former Yokogawa or Iwatsu product?

Letsee Bret. If I want to have audio test equipment that will measure
spurious responses> 100 dB down,, I either buy a M-Audio AP 24192 for $179
and 2 watt 5k pot to use as an attenuator for testing power amps and the
like for about $10 more, or I pony up $4,500 - $10,000 for a used Audio
Precision rig that is a whole lot better and easier to use, but in the end
also measures spurious responses > 100 dB down.

How about renting one? Well one source offers new AP equipment for rent at
1/10 of new price *per month*, and another offers a legacy AP System One for
$650 a month.

You pays your money and you makes your choice...

It's not a question of can't. It's a question of don't want to.

Look at a Mini-Circuits catalog sometime. What people would have given
for those parts in 1940...0r 1960?
http://www.minicircuits.com/

My biggest beef with ARRL handbooks were they were too specific to
Amateur radio. If you knew RF theory and good design practice you could
build anything you wanted. They used to publish all these homebrew
receivers that were actually poor designs because they assumed the
amateur wanted a ham-band-only receiver and nothing else, and also did
not have a generator to align them with. They were also very trendy in
that when the new came in they promoted it to the exclusion of all

else. For example, they went over 100% to solid state on PCBs in the early 70s, despite the fact a lot of hams never liked making PC boards and quit building when they were convinced the tube equipment was no good. They did not promote the idea that you needed good test equipment and encouraged the use of half-assed methods and procedures. When they did publish test equipment projects it was for the stuff you could buy cheaply, not for what you really needed that was expensive. They never published a frequency counter that was any good even though counters were high dollar relative to build cost until the 1990s.

Still, there's a lot of good data there. My favorite ARRL books are 1955, 1962, 1965 and 1976. The RSGB books from that timeframe are also excellent and the W6SAI book can be as well, but he was a poor editor.

Dunno, and don't care, either.
It works, which is as much as one might expect from a Windows XP-based
thingy ;-)

I still prefer the sturdy old AP1, though.
I'm getting too old to get used to all new thingies they buy in order
to lower our profit taxes.............

5239. Yaesu FT-840 - Reduce Minimum Power

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-26 19:28:13 UTC
From: electro <jeyoung@sympatico.ca>
Message-ID: <1164569293.124917.122080@j44g2000cwa.googlegroups.com>
Source record: 6525

I use an FT-840 and would like to add an external 6 meter transverter. The problem is the FT-840 puts out about 10 watts at it's lowest power setting. My transverter is designed for 5 watt input maximum.

Does anyone know how to adjust the radio for a reduced minimum power output? What I was hoping was to reduce the minimum only and try to keep the maximum output settings to 100w.

5240. ICOM CK-11 Cable Kit for IC435 Series Transcivers: $25 p3

Source record: 6527

Hello to all,
thanks 4 reading. I'm Iz8ffc, in Rome, Italy.
I've to BUY my FIRST radio ! to use in 30% in portable mode, when i'm out at sea or among mountains and 70% in my rig , at home !
I like these 2 radios, and i'm so in doubt about witch one i've to buy.

80% of my qso are in CW and i need a good receiver. ONLY a good receiver.
Which one is the best ? Please help me !

I'm not interested at other bands such as VHF or UHF so 817 isn't in my thoughs...
but several times om from around the world advice me the 817 because is (in their opinion) the best in rx !

Here there are my question:
1) Is the tuner of 703 useful ? Tune EVERY antenna ? i know that will not tune wire antenna..but little dipoles, strange antenna ? Or you advice me to use my LDG z100 AUTOTUNER ?

2) Is the 703 very versatile , portable to use in a field ? Or is it very complicated ?

3) Maybe i've to buy a 706 and i resolve all my doubts?

The three things because i don't want to buy 817:
1) It has a little display and doesn't have a DSP , and AUTOTUNER.

Mind you that i'm not interested at v and uhf!
SO: WHICH ONE DO YOU ADVICE ME ? THANK YOU A LOT

5243. NIR-12 DSP Filter Firmware

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-27 04:28:40 UTC
From: electro <jeyoung@sympatico.ca>
Message-ID: <1164601720.758023.307260@h54g2000cwb.googlegroups.com>
Source record: 6529

By chance does anyone know the latest (last) firmware version for the NIR-12 DSP filter? Since this unit is out of production, I wonder if a newer firmware can be copied to a disk then burnt or flashed to a new ROM chip.

Any thoughts?

FYI
I just got my eBay CD with the ops and service manual and first glance tells me that it has what I need. It's 202 pages and much more comprehensive than the Agilent download and has examples on how to use it.
Thanks to all who tried to help me.

5248. Automotive style GPSes with NMEA-0183 HW interface?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-27 18:11:26 UTC
From: Ken Finney <kenneth.c.finney@boeing.com>
Message-ID: <J9EIJ2.7M8@news.boeing.com>
Source record: 6420

I need a GPS that was a HARDWARE NMEA-0183 interface to put into my car so I can run APRS (Automatic Position Reporting System). The books say MOST of the GPSes made have this feature, but it is such an obscure thing that none of the GPSes I've looked at mention it at all (on the box or on the website), and I can't really open up the boxes to read the manual. Some of them mention they use the NMEA-0183 protocol, but then say they transmit the protocol over Bluetooth or USB. I need a GPS that has the NMEA-0183 hardware interface using a serial port. I know I can get a cheap Garmin eTrex (about $99) that has it, but I'd really like to get one of the newer automotive-style GPSes that are on sale everywhere. Anyone know of a website that lists which GPSes have NMEA-0183 serial ports or which of the automotive-style ones have it?

That's exactly what I want, except the price! $849 versus the sub-$200 ones
that are on sale everywhere. Hopefully, I will be able to find one of the
sub-$200 ones that will work. Thanks for the NWAPRS name, I think I need to
read the 7000+ messages on their yahoo group.

If the thing under test is amenable to it, there's little
or no hope of improving on a PC soundcard and Matlab as a combo. Might
need a breadboard to adapt the signals, but if it's in range,
it'll outrun just about anything for the money.

You're assuming you can trust the test equipment. Sometimes,
you can't....

No Sal, You'd still be a retard. Doing ATV doesn't any require skill, and
it doesn't have it own test element either. A CB'er could go ATV, maybe
thats why you're good at it.

Come back after you learn CW to 20 wpm, and I'll pat you on the back and
say "Welcome to Ham radio, Well Done."

I did, but this is the only way to reach the no-codes hams, this and CB,
but I don't do CB.

You need both to be a well balance operator. If you're willing and
motivated enough to be able to learn and communicate with CW, you're also
more likely to be motivated to advance yourself technically in other areas
of radio as well. You won't be one of those unmotivated no-code appliance
operators you hear on repeaters who spend their days kerchunking all the
machines in the area.

I most certainly did not start it. I'm the nicest person on usenet.

I'm here to help guide and motive people on how they can make themselves
better radio amateurs, unfortunately, some of those I'm trying to help
prefer to be stupid and lazy, and they flame people that try to help them
and they are down right rude. You can see the no-code license was a bad
idea, we need to require all hams pass a code test to bring intelligence
and civility back to ham radio and the repeaters. I prefer getting the
code requirement back up to somewhere between 13 and 20 wpm for all hams.

The RS-12-903 is discontinued according to this reviewer:
http://www.geocities.com/rbrucecarter/12_603.htm.
and the GE SuperRadio 3 is an underperfomer according to this one:
http://www.dobe.com/wts/funk/GESRIIIreview.html, but still available as
a Thomson Multimedia product from Amazon.com.

A high-value for money radio for MW, SW, and VHF-FM is the Kaito
KA-1103, or the same radio direct from China via eBay, the Degen
DE-1103. Highly sensitive, with good selectivity, digital display and
tuning (oodles of memories) and capable of SSB/CW reception. User group
at http://groups.yahoo.com/group/de1103/ . Many user reviews at
http://www.eham.net/reviews/detail/5071 with a 4.7/5 average rating
(that's a value rating not a performance rating). The Eton E5 is
similar electronically (same factory) but with a better user interface;
its price is in the range of the Sony 7600GR but latter has synchronous
AM detector for reduced distortion on fading signals - reviews
http://www.eham.net/reviews/detail/1534.

Some ISPs will not allow attached files to be posted to any NG, but they may allow attached files to be posted on one or more of the binary newsgroups (try a search on your ISP for binary NGs). One ISP I had long ago would allow attached files to any post on any NG, but the ISP I have now will return an error message.

Also, some newsreaders can't handle attached files on NG posts, either.

Are you talking about any PC _sound_card?

and Matlab as a combo. Might
> need a breadboard to adapt the signals, but if it's in range,
> it'll outrun just about anything for the money.

A PC _sound_card? Meant for _audio_ frequency ranges? Like single diget Hz to 20-30 kHz? You think I'd rather have that than a decent DC to RF (X mHz) oscilloscope 10 v/div down to 1-10 mv/div sensitivity? Time base seconds/div to microseconds/div or less? And, can measure DC. Maybe if you want to do some FFT or other DSP on an audio signal you can have the soundcard. I'll pick the dedicated gear with specs that fit the ap.

> You're assuming you can trust the test equipment. Sometimes,
> you can't....

You mean you don't need to _assume_ the soundcard is working or you don't need to worry about sw bugs or invalid process or tollerances or other spec-dependent limitations? So, if the computer says "X" then it is absolutely true, valid, straight from the horses mouth? No ands, ifs, or buts? Do you know what the term "parasitic" means as it applies to chips?

Hi,
Does anyone have any type of experience of the (I think it's called)
Pyramid Antenna?
It's a sort of folded dipole with each leg one sixth of the total length
(total length is one wave length).
See picture here http://www.mypix.se/ShowFriend.asp?AID=JPJMIOPPLQG
Thinking about on like this for 80m placed on the roof.

73's

The fact that you even ask that shows how little you know about them.
However some like the Lynx compare pretty well to an AP test set within
their designed range, for a LOT less money.

> A PC _sound_card? Meant for _audio_ frequency ranges?

Yes, amazing isn't it that is exactly what audio people want to measure, but
try <1Hz to > 90kHz for some sound cards, with <0.001% N+D.

>You think I'd rather have that than a decent DC to RF (X
> mHz) oscilloscope 10 v/div down to 1-10 mv/div sensitivity?

Shit just about any sound card can do that voltage range with a 20 cent
resistive divider. Shame you didn't mention the real problem, if you want a
high input impedance you need a high quality buffer amp. Of course those
simply measuring audio gear don't need it.

>Time base
> seconds/div to microseconds/div or less? And, can measure DC. Maybe if
> you want to do some FFT or other DSP on an audio signal you can have the
> soundcard. I'll pick the dedicated gear with specs that fit the ap.

Good for you, especially if your application is not audio. Funny though how
most dedicated test gear is connected to a PC data aquisition system these
days, at least in most metrology labs. The ability to make repeated
measurements unattended, with data manipulation, analysis and presentation
is something not many labs would be without anymore.

> You mean you don't need to _assume_ the soundcard is working or you don't

Calibration standards apply to ANY test gear, analog or digital, PC based or
stand alone.
Anybody with knowledge of metrology understands how to make proper
measurements, those who don't believe their test gear's badge is all the
calibration that's necessary :-(

Absolutely. *In this case*, the rig beat out some rather expensive
specialized test gear. We also needed several hours of captured data.

We had eight or nine scopes and three logic analyzers; the PC
complemented 'em nicely. What works depends on the test.

I guess my 2m in the car qualifies as an appliance radio. My HF radios are mostly all old tube type. Real radios have a warm glow. I came upon a bargain that I couldn't pass up on a Yaesu FT-901. I'm still trying to decide if it's too new for me. I still practice with code tapes but I ain't getting much better but, I'm proud of my 5 wpm extra class licence.

Gee! When I look at the photo I read 80 to 15 meter amplifier in the title block on the amplifier for auction # 220051930613.

That advertises it as an amateur band amplifier.

> Are you talking about any PC _sound_card?

Let's put it this way. A lot of good audio development and test was done with equipment such as the HP 333/334. Conventional wisdom is that if you can't measure it with a 333, you can't hear it either. A 333 pretty well ran out of gas around 0.02% THD. IOW if you hooked a perfect signal source up to a 333 and nulled it carefully, that would be a good residual. The residual THD of a typical Realtek audio interface on a modern motherboard is less than that.

> and Matlab as a combo. Might
>> need a breadboard to adapt the signals, but if it's in
>> range, it'll outrun just about anything for the money.

All you need is a a modern PC and a freeware audio testing program - RMA55.

> A PC _sound_card? Meant for _audio_ frequency ranges?

Unh huh.

> Like single diget Hz to 20-30 kHz?

Well up to 20 KHz or so.

> You think I'd rather
> have that than a decent DC to RF (X mHz) oscilloscope 10
> v/div down to 1-10 mv/div sensitivity?

Try verifying the specs of a $39.95 DVD players audio outputs with a scope.

In the real world of general purpose troubleshooting and development you would ideally have both.

> And, can measure DC.

That's what voltmeters are for, chum.

Measurements are what they are. Their utility is always in the
interpretation.

> No ands, ifs, or buts? Do you know what the term
> "parasitic" means as it applies to chips?

It means, "Where is my dual-trace scope?"

5281. Classic Computer for a Ham Shack

Newsgroup: rec.radio.amateur.equipment
Date: 2006-11-28 15:25:10 UTC
From: Alex <samalex@gmail.com>
Message-ID: <1164727510.256694.183240@h54g2000cwb.googlegroups.com>
Source record: 6463

Hey Guys,

I'm a new ham radio operator, but I've been working with computers for most of my life. I'm now in the process of setting-up my first 'ham shack', and instead of going with the latest and greatest, I hope to employee several classic computers to help me along. I have quite a collection in my closet I plan on pulling out, but I'd like opinions of others on what they would use in such a situation.

First, I do want to connect my radio to the computer, and many of the technologies used by ham radio operators, like slow scan TV, packet radio, etc, can be used on most of the classic computers in some form or fashion. This I don't think I'll have a problem, no matter which systemI go with.

One of the main things I do want to do is have the computer on my home network. I don't need a web browser or even a GUI interface... the main thing I would really need is Telnet and FTP. I also want something with a word processor and spreadsheet program -- even Visicalc would be nice to use.

And finally I want something fun.. which is the entire point of this venture :) I know some older computers still have huge repositories of software online, and whether it's a game or neat utility, I'd love to setup a classic computer I can really use and have fun with while in my 'ham shack'.

Here's a list of computers I have around me now:
Tandy Color Computer 2
Tandy Color Computer 3 (128K model)
Commodore Amiga 500
Apple II (original, not PLUS)
Mac Classic

And though I don't currently own one, I'm looking at getting a Commodore 128 as well, either from a friend of possibly from ebay.

Anyway, just curious what others would choose if you had to pick a computer or even a couple of older computers to use again. Also if there's any ham operators out there with experience with older systems, I'd love some feedback!

Take care, and thanks in advance for any ideas.

Alex

Hi Slow Code,
I don't normally open your posts (didn't note the sender this time) so I
don't
know if your the nicest person on usenet or a jerk. I do know that your
posts
seem to turn into arguments about personalities and disrupt the flow of
helpful
info that can pass on rec.radio.amateur.antenna.
I think this newsgroup is dying a slow death and suspect many are leaving
because

of drivel such as yours. I know I have contemplated dropping
rec.radio.amateur.antenna
off of my list, there is just to much on the net to put up with much
garbage.

>>You can see the no-code license was a bad idea, we need to require all
>>hams pass a
>>code test to bring intelligence and civility back to ham radio and the
>>repeaters.

I have been listening to the hams bands for years and noted plenty of room
for
intelligence and civility, I don't think no-code has added in more room.
The biggest problem I have noted is intentional interference on polite
roundtable
conversation.
Hmm! That seems to be what you do, only you do it on multiple
frequencies
(newsgroups) at the same time.
Mike

Thank for the comments Roger. Yes, the first thing I did was dispose of
the battery. I have only used the stock wall wart charger with the
TH-F6. I checked the output voltage of the wall wart, and it was fine.
If I hadn't tried to remove the battery, I might not have been aware
there was a problem. I put this post here, in part, to make others
aware that there might be a problem here. It might be a good idea to

remove the battery, and check it from time to time. Li batteries make me a bit nervous, and I was concerned when I found this problem, and thought it would be a good idea to make this post.

Thanks
Al / K1LTJ

With almost all of the ones you mention, you would probably have to buy a Multi-Mode Controller to run any of the digital modes as several of them do not have sound cards. In some cases, you would have to home brew a connection cable as I believe some of them have non-standard serial ports. Any terminal program will then suffice to run the multi-mode controller. However, Multi-Mode Controllers are rather expensive and it might be wiser to simply invest in a new computer with a sound card (which may very well cost substantially less than the multi-mode controller).

Software for computers this old is almost unobtainable even via the internet. I loved the Tandy Color Computer series (had the original, then the 2 and finally the 3). But I got rid of them when the technology moved substantially past them. Loading programs from floppies or cassettes just doesn't cut it these days (no hard drive for most of these).

Dee, N8UZE

Nope! Look at the photo of the front of the amplifier. The manufacturer clearly
states "80-15 Meters"

The seller has misrepresented the product :-)

Now! Go look at this one "160057649761"

I have acquired a Nems Clarke Field Intensity Meter and cannot located much, heck , any information on this particular model. It looks similar to the 120-E but this one is all transistorized. Technology looks to be late 60's or early 70's. Does anyone know ANYTHING about this unit? Google has let me down and I cannot locate a picture, a instruction book, or a description.

Senator Kerry's wife is NOT FRENCH!!

She is African-American [really]!!

Senator Kerry has a real problem. He is a Liberal Democrat from the Peoples Socialist Republic of Massachusetts.

Is it a broadcast model or one for lab use? Nems-Clark bought out the
RCA models and I think Potomac acquired those from there.

I am not sure how to tell. It is a portable unit (has a handle) and has a
place to put it on a tripod. Its lid folds upright and has the antenna in
it. I believe it was for going into the field and recording signal strength.

The History Of The Middle Finger

Well, now......here's something I never knew before, and now that I know it, I feel compelled to send it on to my more intelligent friends in the hope that they, too, will feel edified. Isn't history more fun when you know something about it?

Before the Battle of Agincourt in 1415, the French, anticipating victory over the English, proposed to cut off the middle finger of all captured English soldiers. Without the middle finger it would be impossible to draw the renowned English longbow and therefore they would be incapable of fighting in the future. This famous English longbow was made of the native English Yew tree, and the act of drawing the longbow was known as "plucking the yew" (or "pluck yew").

Much to the bewilderment of the French, the English won a major upset and began mocking the French by waving their middle fingers at the defeated French, saying, See, we can still pluck yew!

Since 'pluck yew' is rather difficult to say, the difficult consonant cluster at the beginning has gradually changed to a labiodentals fricative F', and thus the words often used in conjunction with the one-finger-salute!

It is also because of the pheasant feathers on the arrows used with the longbow that the symbolic gesture is known as "giving the bird."

IT IS STILL AN APPROPRIATE SALUTE TO THE FRENCH TODAY!
And yew thought yew knew every plucking thing!

We now carry the Elcom uTNT products.

They can be used with your radio and GPS as a small portable APRS
tracking station. The internal battery makes it very portable.

Dimensions 21 X 60 X 43 mm or 0.8 X 2.3 X 1.7 inch.

They also make good full function TNCs. USB connectivity is built in to
provide connection with laptops that don't have serial ports.

http://thedigitalham.com/tdhwiki/Elcom_Products

Fast Shipment

Over the past few years we've seen some great strides made in both
battery capacity and current density. We've seen an extremely
expensive recall due to a few failed Lithium batteries. Some of those
failures were spectacular. The batteries don't usually explode with
much force but the results, as I said, can be spectacular and
dangerous if you are close.

This brings to mind a question.
Just how far will we be *allowed* to go with battery capacity and
current density?

There are two ways of extending the charge quantity in a battery.
Increasing current density, the physical size of the battery, or a
combination of both. Both have some distinct drawbacks. The one of
size is obvious. The drawback(s) for increased current density OTOH
are not so readily apparent.

Batteries of high current density are characterized by a very low
internal resistance. That means the results of shorting out a 2 AH
dry cell and shorting out a 2 AH Lithium battery are quite different.
Both have the same charge, or Joules of energy BUT the rate at which
that energy can be taken out of the battery is much greater with the
Lithium battery than the dry cell. IOW the current flow is not limited
by a high internal resistance, but is extremely high due to a very low
internal resistance.

A watt is one joule per second. It's also 1.5 Volts pushing 0.66 amp
through 1 ohm for 1 second. A watt is also (I^2)*R so anything we do
to increase the current flow will dramatically increase the power
released per unit of time.

As Lithium batteries are already spectacular in this respect we really
don't have a long way to go before there could be a lot of force
released when a battery is shorted either internally or externally.

Depending on its frequency range it may be quite valuable, as it
sounds like you have the progenitor to the classic Potomac FIM.They are
$12-15,000 new.

G'day,

Looking for specs on this amplifier:

http://img100.imageshack.us/my.php?image=pa2modhi7.jpg
http://img484.imageshack.us/my.php?image=pa1modzp8.jpg

Don't know much at this stage, apart from 4Watts drive (@ 430-480MHz)=
approx. 150W output, draws well over 30A from my poor struggling power
supply. I'm not game to up the drive any further until I know the specs!

Basically any specs or any info at all would be great, thanks in advance.

Cheers,

5318. Re: FS: UHF Radios HH & RF parts

Mitch -

So if they are for sale, what is the price?
If you are asking for "best offer", then it is an auction.

Bill

Let's take a wild guess here, you want to use it on the UHf Chook Band to talk into the 5 w output repeaters, if that's the case, and I do hope I'm wrong, you'd be better off with a decent antenna system,

Cheers,

Warren

5320. Ever hear an operator on the bands that you'd just like to slap the shit out of?

WRONG, I plan to cause havoc on the remaining analog police repeaters-
ya idiot. There's more to the UHF band than CB radio you know.

LOL, quite.

Amazing isn't it - cannot discuss power amplifiers in these
Aussie groups without the usual knee-jerk assumptions, irrespective of
being perfectly within the law to own and use in an appropriate manner.
Apparently no Hams here use amplifiers I guess.

You mean there are some Hams left?
BPL will fix that. lol

I own a very nice Henry thanks , not used for a while but at 400 watts
it doesn't get even beyond warm on tune when running .

Been a few years, but looks like a PA out of either a MSR2000 or MSF5000 repeater. In any case, I'd say you were overdriving it with 4 watts, as indicated by the 150 watts out. Its probably a 100 or 110 watt amplifer. I believe that most Motorola exciters for such amplifiers put out either 1 watt or possibly 2 watts.

Most of the chicken bandits in my area run ham equipment, commonly
Yaesus and KWM-2s.

Why bother power amplifier related postings in a CB Radio group then ?
state exactly what your using it for and post in the appropiare group.

YOur best bet would be to get the ARRL CDs for QST magazine; get the one for the 1970s and the one for the 1980s, and browse for articles on your computers. But as the other guy said, software would be awfully hard to find, unless you could find some old programs you could type out yourself.

Best bet would be to simply get a cheapo more or less modern PC with a good sound card; some of the newer digital modes are pretty amazing.

I used to use my color computer for an Antenna rotor controller. The joystick port took feed back from the rotator to tell which way it was pointing and I had built a relay board that plugged into the expansion bus. These were cool little computers to play around with and you could find them in yard sells for nearly nothing. At one time I had 8 of them all at once and probably went through about 15 of them. I remember getting an alternate OS for it and running pascal. I think the oprating system was called OS9???.
They were a blast, think I still have a couple in the attic. Also had an Apple II+. Then someone gave me a whole bunch of Apple II clones, must have been 15 or 20 of them. Most didnt work when I got them but I was able to get all but 3 or 4 going. They were all fun to play with but wouldnt be my choice for a ham shack computer. The color computer did have one thing nice going for it though. It seemed to be fairly tolerant of RF in the shack. I cant say this for a lot of the other computers especially the appales.

Welcome to aus.radio.scanner, please feel free to ask any other questions
that are not related to the topic of the newsgroup.

I'd suggest joining www.batlabs.com and ask on there if you want to know
technical specs, whilst there are some people in this newsgroup who actually
know what they are talking about in relation to the technical side of
Radios. I am not one and there are a large portion of people who response
with smart ass remarks

He isn't driving "me" away from ham. People like him - come and go every day
in my life. I look past them.
I just wish "others" in "here" did that! His posts are ruining "these"
newsgroups.

They and Kenwood had displays at the recent TAPR-DCC. The Kenwood rep
mentioned that they, unlike any of the other major GPS manufacturers,
are willing to work with Kenwood on tweaks that make them even more
APRS friendly. As a retired pilot, I got a chuckle out of one of the
display formats which mimicked an aircraft Horizontal Situation
Indicator, HSI. I gather they are primarily a European avionics firm
looking to expand and move into the consumer market, which may account
for some of the price.

5342. Energize 2500mah problem

Newsgroup: rec.radio.amateur.equipment

I find the Energizer 2500mah double A batteries have major problem that causes them not to hold a charge. When I require the use of these batteries I find they are dead after only a few weeks of shelf life. The Energizer 2100mah cells are great with no problems what so ever and they have an outstanding shelf life. When I called Energizer to discuss the problem with the 2500mah, they deny any problems with these batteries and inform me the problem is my charger. I have use 3 different charges and the problem remains. I recommend no one purchase the Energizer 2500 mah batteries due to their failure to hold a charge. I will never purchase Energizer batteries again because the Energizer Company fails to support the customer. Has anyone else have this problem?

What is interesting is for every post SC makes, you whining crybabies
make 10!

As for driving people away, Ham Radio needs more QUALITY not QUANTITY!

one dude on ebay selling the rm italy amps,
private auctions so nobody sees who buy them.

low drive, you know that type of amp,

anyway, fcc emails me back they only care about
the large wholesalers.

I give up.

I use 2500 ma. I have several sets. They work fine for me. Yes, you
cannot have them sit around. NiMh cells do have a self-discharge. The
conditions you mention seem perfectly normal for nimh cells.

>anyone else have this problem?

I don't have direct experience with those specific models. However, I
have read (and noticed myself) that NiMH cells have a much greater
self-discharge rate than NiCD cells do. One source states that
typical NiCd batteries tend to self-discharge by around 10% per month,
that typical NiMH batteries are up in the 25%-per-month range, and
that there is a tradeoff between NiMH self-discharge rate and total
battery capacity. Self-discharge can be reduced, it seems, by
selecting the hydride material to improve hydrogen bonding, but this
typically reduces the battery capacity.

It seems likely to me, based on this reading and on what you report,
that the 2100 and 2100 mAH Energizer batteries may have been designed
and optimized for two different sorts of use strategy. The 2100s may
use a hydride with stronger hydrogen bonding, which would reduce
self-discharge and give a long shelf/storage life. The 2500s sound as
if they use a weaker-binding hydride, optimizing for the greatest
amount of storage capacity when freshly charged, but with a more rapid
self-discharge.

I've heard similar tales from a guy who makes extensive use of
battery-powered electric hand tools. In his application (occasional
use) he strongly prefers NiCd batteries, since he can charge them up
and depend on the tool still working in a few months. The NiMH
batteries seem to be preferred by people who use their tools
constantly, and need recharge them every few days anyhow - the faster
self-discharge simply doesn't matter for these folks and the greater
battery capacity is a win.

Sounds like trickle charger, charging at a few milliamps higher than the
shelf discharge rate would be a good DIY project!

Regards,
JS

i didn't save any links but in the past surfing/googling at college
web sites and ftp site found lots of software for those legacy
computers because they just never deleted the stuff so it's mostly
still up there if you can google the right string or find some of
the more famous old ftp sites that slip my mind if you run 'fetch' on
the newest mac it might even be in the defaults

Yep. It was OS9. I had the Radio Shack Color Computers at one time and
adored them. Now they wouldn't even be able to handle the simplest things I
use a computer for.

You think this is bad, you ain't seen bad. Just wait until the Lids take
over HF after CW is eliminated, then you'll be sorry.

That is, You'll be sorry unless you like what CB sounds like.

It's the new people that don't want learn or be skilled at anything that
will turn ham radio into CB and drive good hams away.

SC

5360. So you lids don't want to learn CW, what are you going to learn instead?

Do you ever post anything positive?

Your posts aren't worth posting to the five boards you are boring to death.

I like CW so don't throw any of your nonsense my direction.

While I'm at it, it's not very smart to post a message responding to someone
without quoting them.

5376. ICOM IC-765 Receive Sensitivty - DEAD

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-02 19:58:49 UTC
From: Mark Bailey <mjb@jobsoft.com>
Message-ID: <p-mdndmwQdFkR-zYnZ2dnUVZ_vqdnZ2d@comcast.com>
Source record: 6362

Hello,

I have an Icom IC-765. Recently, after we moved, I setup a random longwire antenna up outside and coupled it and ground to a length of 213/U and attached it to the SO-239 port on the back of the 765. I got absolutely NO receive signal/sensitivity whatsoever. Even on 10 and 15 mHz. I knew this could not be right. I checked the coax and PL-259 for a short - no problems there. I attached the antenna to another receiver and it was definitely pulling in signal. So, I then rigged an RCA phono plug and attached the coax center lead to the Receive Only Antenna jack just below the SO-239 and the receive signal shot to a full quieting WWV signal on both 10 and 15 mHz!!

So, clearly something has happened to the antenna path from the SO-239 inward. I popped the top and could see no visible solder breaks in and around the SO-239 backside. I suspect that the problem is occurring somewhere in the antenna tuner (well, maybe) as I think I understand that the receive only antenna jack bypasses the antenna tuner.

Has anyone experienced this before? is it fixable by modest mortals? It is a pain (and $) to ship the unit to Icom, so, I was hoping someone here might suggest some possible things to try first.

Thanks!

Mark Bailey, N4XHX

Hi Alex, You sound like a brand new no-code Tech. Welcome to ham radio.

All those computers you mentioned will work fine, but if you really want to do any serious computer work you're going to want to invest in a Vic 20, or a TI-99, or a Commodore 64. Power users swear by'em.

Yes unfortunately and an awful lot of them too.

They all hate the CW requirement and want ham radio to get dumbed down
more, but if I had to single just one of them out for a good slapping, I'd
probably say it's Markie that needs it the most.

Now if Markie learned cw to 13 or 20 wpm, I'd congratulate him
and say, "Welcome to Ham radio Markie."

CB'ers don't normally go quality. Got any nickel plated crimp-ons from Radio Shack for them?

Mark, one quick thought here. When you contact an antenna to the
so-239, you need to have the 'rcv ant out' jumpered to the 'ant in'
phono plug to bring sigs into the reciever. Good luck.

Even with those the CBers won't use a crimping tool. Too expensive. They
just squeeze the crap out of the ends with greasy pliers.

Well, very glad you mentioned that as I had forgotten that I had removed the jumper during the move. I grabbed it, but, still no change! :-(So, it looks like the issue will prove more problematic. Icom had a KB item #5BBA49629A that talked about replacing Tuner Relay Unit relay RL13 (LY2-0-DC12V). I wonder if there is any way to determine that this might be the culprit without dismantling the Tuner Unit (sort of a pain it appears)???

Yes, forgot about the SDK-85. Used that in tech school way back in
1981. That was a smoking little bare-bones computer system...

Any IBM PS/2 model would be perfect. They can be had for next to
nothing and are well-nigh indestructible.

With a Yaesu VX-5 powered from a Radio Shack car cord attached to the console cigar lighter socket, I get rapidly repeating noise likened by others to spark plug noise; but, no spark plugs on a diesel. Removing the card cord and transmitting on battery eliminates the problem.

I'm about to switch from the VX-5 HT to a Kenwood TM-V7A; how may I avoid this problem when installing the mobile transceiver.

Thank you in advance for your on-topic suggestions.

73s & best regards,

K7AAY

Fuel injectors are the most likely source of the noise.

First, use a direct connection to the battery terminals. Second, twist the connecting wires 2 or 3 twists per foot from the battery to your radio. Third, get a GOOD chassis ground connection for the radio.

If noise persists talk with the CRD service techs regarding slightly slowing down the rise time of the fuel injectors or adding a suppression diode across the fuel injector coils [it is unlikely you will get any support in this area, but worth a try]

If you contact DC, they might send you the booklet on installing a transmitter into the vehicle. They get very specific on where the power and grounds can be run as well as the antenna wire.

On GM's for instance, you have to have a 10 ga. dedicated fused power and ground line to the battery run far away from any vehicle harnesses to avoid voiding the vehicle warranty. Transmitters can interfere with things like the ABS and transmission modules, like some TJ's will go into neutral when the transmitter is keyed up, and any other electronic part.

Here is a link to GM's instructions, I haven't found any online for Jeeps:
http://service.gm.com/techlineinfo/radio.html

Gary,

FWIW, I found a PDF of the Service Manual for 765 and a Yahoo Group that had some good threads on this very problem. Seems likely that my problem is a failed RL201 relay on the Antenna Switch Unit. I was able to easily get the Tuner Unit out (after finding those threads) and pull the Tuner Unit with RL13 out of the loop and found that the relay RL201 which switches the tuner out on Receive worked on one side and not the other.

So, hopefully replacing that relay will do the trick!

FYI

Mark

Thank you for your on-topic reply!

I do have the equivalent for a 2006 Charger Police Edition, which may be downloaded from the very last link at http://www.503bartley.com and will look for a similar "outfitter's guide" for the Liberty.

Tnx for the update. That's good news; sounds like the fix may not be
too painful/scary. I've really enjoyed my '765 over the years and given
the prices of most new rigs, will continue to do so! I've been out of
hf for a time but am stringing a high dipole this week. Looking forward
to bringing this 765 back to life. See you out there..

Gary

Trick may be actually FINDING the relay, if it's one of those proprietary
Icom goodies. I had to advertise for a used stepper relay for my 720A, since
Icom no longer carries any parts for the 720A.

The 239 sucks donkey dick. Real equipment tends to have BNC or N
connectors and has for thirty or forty years.

G'day Ed,

The general consensus is that it did indeed come from an MSF5000, I
started a thread over at batlabs just prior to posting to these groups,
which has paid off somewhat
(see: http://batboard.batlabs.com/viewtopic.php?t=63653&unwatch=topic)
but now of course there is also some conflicting info in the replies...
info on Motorola gear can be hard to find!

I'll play it safe and keep it below 3W until I get definite confirmation
of the specs being different. Cheers

It's a radio related group. Some who subscribe to ARS do not subscribe to other related groups and vic-versa.

> I'd suggest joining www.batlabs.com and ask on there if you want to know

Well, that is Usenet - uncensored and therefore you get the full spectrum of human behaviour. I have no problem with that to be honest, MUCH more preferable than censorship or 'moderation'.

Thanks for your suggestion re: batlabs, I did post a question there on this matter prior to posting to these groups. I have received a few good replies, but still seeking those elusive specifications.

Cheers

>> Apparently no Hams here use amplifiers I guess.
>
> Why bother power amplifier related postings in a CB Radio group then ?

Just to piss you off, Warren.

> state exactly what your using it for and post in the appropiare group.

No. I'm just looking for the specs. That was my query.

Can you define what in your view is an "appropiare" group?
IF you bothered to check the headers, you will see that the OP was
sent to: aus.radio.amateur.misc, aus.radio.cb, aus.radio.scanner,
rec.radio.amateur.equipment

If you believe you know of more "appropiare" groups, or just wish to
drop all pretence and continue developing this into an argument, please
enlighten us all, cheers.

Yeah, that is what scares me! :-) I am calling Icom first thing tomorrow (Monday). I know it was still available up to a couple of year's ago (from one of the posts on Yahoo Groups). If they do have them, and they're not too expensive, I am going to order a couple of them. I actually have located the relay on the Antenna Switch Unit already. I have a part # too. So, if I can just get my hands on it! :-)

Excellent advice. I would add: fuse both hot & ground for good measure at the battery ends of the connections. You could also loop the power cord a couple of times and put a ferrite bead on the power leads.

Always run heavier wire than you think you'll need. It reduces loss and someday you might want to put out more wattage.

If it's a temporary set-up, use one of those gel-cell booster batteried to power your radio.

73s!

You seem to be the one pushing for an argument, I just can't see why you would bother posting in CB and Scanner groups, have look here, http://www.eserviceinfo.com/ there is a lot of Motorola stuff there,

Cheers,

Warren

Hi...

With all due respect, don't even think about fusing ground.

Take care.

Ken

Mate, these groups are inhabited by radio enthusiasts whose interests
don't necessarily begin or end with Amateur radio, CB radio or scanning.

Had I posted with robot-like compliance, I wouldn't have posted the
question at all, since there is no news group for Motorola commercial
equipment. I could use your same logic to not even post it to any of the
amateur radio groups as well.

I think you really do understand why it posted to these groups, it's just
common sense. I wondered before originally posting whether I'd hear from
some pedants, sure enough I did. Oh well, par for the course isn't it...
Some people don't necessarily read whatever groups you feel
are more appropriate, hence cross-posting to a range of radio related
groups.

All I was asking for were the specifications of a piece of radio
equipment, nothing more. But some will never miss an opportunity, no
matter how petty, to have a go at someone over the flimsiest of pretexts.

> have look here, http://www.eserviceinfo.com/ there is a lot of Motorola

Good idea. I worked on Motorola, etc, for the past 35 years, up to
and including MSF5000 UHF like you have. Best I can recollect, never had
an PA that took more than 1 or 2 watts drive..... I could be wrong,
maybe.... its been a couple years.

Ed

Thanks for the link Warren, will check it out.

Hello Jasco , I'm going to do something I don't do very often and that is apologise for jumping to conclusions, I must admit when I read your original posting I thought, here we go again, some UHf CBer wanting info on a very high powered Amp, so he can stomp on every one else, for that I do apologise, in my role as an emergency monitor I get quite a few of the power heads deliberately interfering with the emergency repeaters which I monitor daily, I have even had dead set deliberate interference during actual emergency calls and whilst in contact with the Police Comms Centre, as in, microphone in one hand and the phone in the other, the Police couldn't believe what they heard, so I tend to get a bit touchy when it comes to very high power on UHf CB.

now back to the Amp, I see on the circuit board there is JAS marked in several places, I'm wondering if this is the manufactures identification, if so you might get some info from this mob,

Jas Commerical Printers
Products : Printed circuit boards
Address : 38, Bombay Talkies Compound,, Somwari Bazar, N. B. Road, Malad West,,Mumbai-400064.Maharashtra.
Send : On-Line Trade Inquiry
http://www.easy2source.com/directoryinquiry.asp?Supplier_Id=9882&Cat_id=0&Lent=3

I ran a search on the net and came up with that mob, with a bit of luck they may be the manufactures and should have the info you require, wether the buggers will give the info is another thing , once again sorry for pissing you off,

Cheers,

Warren

Jasco,
Maybe here, more info on MSF5000 if you already haven't got this
link ,
http://www.repeater-builder.com/motorola/msf/msf-tour.html .

The following info has nothing to do with Motorola , but I recently
purchased a Philips 828 back end (25 Watt PA from 828 radio) which has been
modded so as to run a hand held 2 Mtr , there was no info available with it
regarding input power, and me being a silly bugger didn't think to ask the
bloke I bought it from :-) (Hamfest), so at first I set the h/h to 5 W
max, the amp output was 25W, then I set the radio to low power, 0.5 W , the

output was then 20 W, so I came to the conclusion to run it at low power 0.5 W, as that would most probably be the safe input power, 5 W input only raised the output by around 5 W not worth potentially blowing the driver or something major, unless of course the driver had been changed to a more robust type ?, in your case, maybe try at 1W then say 3W and see what the output difference is , if it's only 5 or 10 W on higher input power of 3 W its probably safe to run it at 1 W input,

Cheers,

Warren

You are correct , I have made the conversion on several 828 PA with a
resistive network , latest is an 828 lowband vhf on 6 ,eters with 1 watt
in give 24 watts out , actual drive is about .55 watts via the resisters .

Hello atec77, thanks for the verification, much appreciated, I really should have thought to ask the fellow I bought it from at the Gold Coast Hamfest, but it didn't occur to me at the time, I really went down to buy some N-Connectors as they have had them before, mixed types secondhand in a plastic bag for around $15 , wouldn't you know it, there wasn't any there haha, ah well, ya get that :-) ,

Cheers,

Warren

Great! Now comes the interminably long thread where everyone argues
this Old Rule once again -- without anyone changing their mind -- and
with each post starting "With all due respect ..." containing little.

plonk the thread

Fusing the ground is recommended and required to do it properly on a
GM. If the vehicle loses it's body or engine ground strap connection
for any reason (like corrosion for one) the starter or alternator or
body/lights, etc. can use the radio as a ground. This usually lets the
smoke out of the unit big time.

http://service.gm.com/techlineinfo/radio.html

I have installed hundreds of transmitters in one contract I had and when
they came back in for repairs over the years, on about 98% of power
short issues either vehicle related or transmitter system related had
the negative fuse blown before the positive one. There were lots of
cases of blown fuses due to ratty vehicle grounds also.

Hi SC,

Yup, I got my tech ticket a few months ago, and I'm now working on learning code and studying for the general ticket. I hope maybe January or February, but not until I can get my ham nook setup in the garage plus move my radio from the car to the garage so I can actually focus on the radio :) It's hard learning how to ragchew while on the interstate. hehe

I do have a C64 on the way, and that plus what I have now should be enough to get me going. Too much fun!

Take care,

Alex

Actually, now that I think about it, your question would best be posted
on the moderated Yahoo group for professionals in the Land Mobile Radio
industry..... LMR. http://finance.groups.yahoo.com/group/LMR/

You WILL get a decent and accurate answer to your question there.

Message-ID: <pan.2006.12.04.01.50.29.811140@jesco>
Newsgroups:
aus.radio.amateur.misc,aus.radio.cb,aus.radio.scanner,rec.radio.amateur.equipment

Hmm...

You see, I bet, and this is just a guess mind you, that the part of the
headers that solicited a comment was:

"Newsgroups:
aus.radio.amateur.misc,aus.radio.cb,aus.radio.scanner,rec.radio.amateur.equipment"

And in particular:

"aus.radio.cb"

Seeing as most people posting in this group about high powered UHF gear are
actually referring to high powered UHF CB equipment.....

The fact that you posted no indication that you were seeking info for
Amateur operation but did refer to the frequency range being up to 480MHz,
again within the scope of UHF CB, probably only strengthened that fear...

But that's just my opinion, after all I'm still learning to read Usenet
headers.....

hi alex,

I agree. no need for latest and greatest (and most expensiveist)

check out ibm site below, all these pc and laptops are just off ibm
lease,
most under three years old with the win o/s !!

built in sound, usb, network interface and these were not made in china
since
they were made here in north carolina by ibm before they sold that part
off to lenovo.

many under $ 250-300 with free shipping ups, you just pay sales tax.

we have five of them here at home for what I would have paid for a new
pc.

5444. FS AS NEW HTX-202 2 Meter HT

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-05 18:36:43 UTC
From: Charlie Hugg <hug-a-bug1@cox.net>
Message-ID: <S_idh.3498$Il6.570@newsfe13.lga>
Source record: 6330

I have for sale a Radio Shack HTX-202 2 meter HT in the original box with all accessories that
came in the box from the factory. This HT is practically brand new. It was used a few times
and stored for several years. The memory battery had gone down, so I put in a new internal battery and supplied some AA batteries in the AA battery case(included) and it looks and works like new.
Price is $75. Thanks, Charlie Hugg, K5MBX

5445. FS Atlas 210X HF Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-05 19:08:49 UTC

Well, I have a '99 TJ with a 40 watt police radio wired from the battery.
Noooo problems in 2 years. Automatic, air, GPS etc also.

When I transmit the GPS loses it's location however.

Hi Alan. look up LA Crosse on the web. i got mine a couple years back
from Universal in Ohio. best price at that time. also my favorite
shortwave shop. and, for your computer, google -alpha clock-. great
little
free program, small foot print.

Father Michael.

Sam's Club sells a digital "atomic" clock by SkyScan for less than $20. It has a 2" LCD
time (12/24 hr) display and below it a 1"
calendar and temperature display.
I have two in my shack, one for UTC and the other for Central time.

Hi all,
I've seached all the web but didn't found this information; long ago
this receiver was produced with full coverage 150 - 30000 kHz and
reduced versions like in Germany, whith coverage liï¿½mited to 26100 kHz
(it didn't had the external antenna plug, too.

Does anyone here knows how to fix it?

Many thanks and best regards.

You can also get UTC time info from a GPS unit that has a data port..
UTC time info can also be pulled off the Internet from any time standard site...

I have done all 3, and find that a GPS unit with an external antenna is easy to
set up, and going the Internet route is free...

Father Mike, Glenn, and Robert,

Thanks for the solid information and sources!

BTW, I actually do have a GPS clock for my computer. It works great,
but I wanted something which I could keep in the shack which didn't
require the computer to be up. My ancient Heathkit digital clock died
after 20+ years, and I thought I would replace it, and opt for
something I didn't have to hack with WWV every time the power failed.

Fow Windows XP, this is already built in to the OS. If you double click on the time down in the lower right hand corner of your screen, you will get a Date and Time Properties window to open. Click on the Internet Time tab. Here you can set which time server your computer checks with to get the time. By default it is set to time.windows.com, but you can set it to most any time server. The one I use is time.nist.gov This is the same standard the WWV uses and is also used by those "Atomic Time" clocks on one frequency or another. usually the LF one.

The default check interval is, if memory serves, once a week. But you can change this by doing a simple regedit. Goto Start-->Run and type regedit in the command box. Once regedit starts, navigate to HKEY_LOCAL_MACHINE \SYSTEM\ControlSet001\Services \W32Time\TimeProviders\NtpClient, then select SpecialPollInterval. Right click on it and select Modify and change decimal value from 604800 to some other value in seconds. e.g. I have mine set to 10800 which is 3 hours. This keeps my computer running to much less than one second error and is more than enough for me :D

Hope it helps

Source record: 6253

Two main differances are the 102 has a transistor VFO (think Heath called it
a LMO) instead of a tube and the RF amp for the receiver is a differant
tube to give a little more sensitivity for 15 and 10 meters.
I think the 102 has an extra connector in the back for the transverters but
not too sure about that.

Hi Alan;

I have a desktop Atomic Clock that can do UTC as well
as other time zones.

It has a data port on it so you can connect it to your
PC and pull in the time from it.

It comes with a MS-compatable program, plus I wrote one
for Linux.

I'm considering selling it (I have 2 of them) at $200.oo

If you're interested let me know and I'll give you more
information on it.

Hi John;

Definitely: the SB-102 has a solid state LMO. The SB-101 a tube.

As I Recall: a change in a couple of the receiving tubes and
resistor values.

Nothing Earth-shattering took place.

Still my favorite rig of all times.

May as well put in my $0.02 worth.

Last year, at a local ham swap meet, I bought a Trak Systems GPS
station clock. Extremely well-built 1U rackmount package, doubles as a
very stable frequency standard, and puts out an IRIG-B timecode stream
as well so you can drive slave displays with it if you want.

Initial cost: $75 as a "tech special." Put a couple of hours into
it for troubleshooting, and found the problem to be a bad firmware
EPROM. Got the last release of firmware files from the manufacturer,
made new EPROMs, and had a multi-thousand $$ GPS clock to call my own
for about $120 total (counting time and parts).

There are other surplus clocks Out There. Some are more expensive
than others. Datum and TrueTime (both now owned by Symmetricom), as well
as Odetics (out of business) made numerous GPS-referenced clocks. Most
are rack-mounted, most can be set either for GMT or local, and I've yet
to see one in its class that didn't have a timecode output as well.

Prices vary from what I paid to $300 and up.

Happy hunting.

5476. Using 2 antennas in car

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-08 00:08:50 UTC
From: robcioffi@gmail.com
Message-ID: <1165536530.363742.265290@n67g2000cwd.googlegroups.com>
Source record: 6262

I am trying to hook up 2 FM modulated devices in my car, so I am trying to find a clever way to do so. The problem I have is the reception is poor because the antenna is in the back window of the car, so I was thinking about splicing the antenna behind the radio unit to put a Y adapter, so I could add an antenna directly behind the radio unit so I could get good reception with the FM modulator. Does anyone know of any issues that could arise from this approach? Thanks

CW wasn't all that bad of a filter, but most everyone wants to get rid of
it. After it's gone, I'll just have to stick to the non phone portions of
the HF bands were you still find real hams communicating.

Your AM reception would go to hell for sure. Why not just put on a fender
mount antenna?

My wife has bought a handful of those gray plastic digitals
that set themselves to WWV at night; I was pleasantly surprised
to find that at least two of them can be set to UTC even though
the manual didn't mention it. I've got one in my shack now,
big thing that cost about $10 at a discount store, and shows
UTC time, plus a calendar and the ambient temp. It was a very
nice surprise to find a "UTC" setting on the time offset button!
So looking at those cheap clocks in the discount stores might
bring you the same sort of deal. Good luck!

Yes you can...sweep it with a MFJ-269 and see you need to remove about 2
inches of the rod....
Will work on 52Mhz just fine...

5493. 30 helpful hints to help new and No-code hams. Monthly post.

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-10 00:52:53 UTC
From: Slow Code <my.mail@no.spam>
Message-ID: <FTIeh.8313$sf5.5152@newsread4.news.pas.earthlink.net>
Source record: 6279
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.policy

The 30 Steps below will help all No-Code Hams, it will also help you to find others just like yourself. These 30 steps should also be added to the present writtens.

Step One: Use as many "Q" signals as possible. Yes, I know they were invented solely for CW and are totally inappropriate for two meter FM, but they are fun and entertaining. They keep people guessing as to what you really meant. I.E. "I'm going to QSY to the phone." Can you really change frequencies to the phone? QSL used to mean, "I am acknowledging receipt", but now it appears to mean, "yes" or "OK". I guess I missed it when the ARRL changed the meaning. It is also best to use "OK" and "QSL" together. Redundancy is the better part of Lid-dom.

Step Two: Never laugh when you can say "HI HI". No one will ever know you aren't a long time CW rag-chewer if you don't tell them. They'll think you've been on since the days of Marconi.

Step Three: Utilize an alternative vocabulary. Use words like "destinated" and "negatory". It's OK to make up your own words here. I.E. "Yeah Tom, I "pheelbart zaphonix" occasionally myself."

Step Four: Always say "XX4XXX" (Insert your own call) "for I.D." As mentioned in Step One, anything that creates redundancy is always encouraged. That's why we have the Department of Redundancy Department. (Please note that you can follow your call with "for identification purposes" instead of "for I.D." While taking longer to say, it is worth more "LID points".

Step Five: The better the copy on two meter FM, the more you should use phonetics. Names should be especially used if they are short or common ones. I.E. "My name is Al... Alpha Lima" or "Jack.. Juliet Alpha Charlie Kilo." If at all possible use the less common HF phonetics "A4SM... America, Number Four, Sugar Mexico." And for maximum "LID points", make up unintelligible phonetics. "My name is Bob... Billibong Oregano Bumperpool."

Step Six: Always give the calls of yourself and everyone who is (or has been) in the group, whether they are still there or not. While this has been unnecessary for years, it is still a great memory test. You may also use "and the group" if you are an "old timer" or just have a bad memory. Extra points for saying everyone's call and then clearing in a silly way "K2PKK, Chow, Chow."

Step Seven: Whenever possible, use the wrong terminology. It keeps people guessing. Use "modulation" when you mean "deviation", and vice-versa.

Step Eight: If someone asks for a break, always finish your turn, taking as long as possible before turning it over. Whenever possible, pass it around a few times first. This will discourage the breaker, and if it is an emergency, encourage him to switch to another repeater and not bother you.

Step Nine: Always ask involved questions of the person who is trying to sign out. Never let him get by with just a "yes" or "no" answer. Make it a question that will take him a long time to answer.

Step Ten: The less you know on a subject, the more you should speculate about it in the roundtable. Also the amount of time you spend on the subject should be inversely proportionate to your knowledge of the subject even though you have no damn clue.

Step Eleven: Always make sure you try to communicate with only a handheld and a rubber duck antenna. Also, make sure you work through a repeater that you can hear very well, but it cannot hear you. This will put out a kind of "LID mating call": "Well, Joe, I can hear the repeater just fine here. I wonder why it can't hear me?" You will score maximum LID points if you are mobile, and with the radio lying in the passenger seat.

Step Twelve: If you hear two amateurs start a conversation, wait until they are twenty seconds into their contact, and then break in to make a call, or better yet to use the auto-patch. Make sure you keep the repeater tied up for at least three minutes. This way, once the two have re-established contact, they won't even remember what they were talking about.

Step Thirteen: You hear someone on the repeater giving directions to a visiting amateur. Even if the directions are good, make sure you break in with your own "alternate route but better way to get there" version. This is most effective with several other "would-be LIDs", each giving a different route. By the time the visiting amateur unscrambles all the street names whizzing by in his mind, he should have moved out of the range of the repeater. This keeps you from having to stick around to help the guy get back out of town, later.

Step Fourteen: If an annoying station is bothering you, make sure your other "LID" buddies have a "coded" frequency list. Even though "CODES" are strictly forbidden on Amateur Radio, it's really neat to practice "James Bond" tactics.

Step Fifteen: Always use the National Calling Frequency for general conversations. The more uninteresting, the longer you should use it. Extra points are awarded if you have recently move from an adjacent frequency for no reason. Make sure when DX is "rolling" in on 52.525 that you hang out there and talk to your friends five miles down the road about the good old CB days!

Step Sixteen: Make sure that if you have a personal problem with someone, you should voice your opinion in a public forum, especially a net. Make sure you give their name, call, and any other identifying remarks. For maximum points, make sure the person in question is not on the repeater,

or not available.

Step Seventeen: Make sure you say the first few words of each transmission twice, especially if it is the same thing each time. Like "roger, roger" or "fine business, fine business". I cannot stress enough about encouraging redundancy.

Step Eighteen: If you hear a conversation on a local repeater, break in and ask how each station is receiving you. Of course they will only see the signal of the repeater you are using, but it's that magic moment when you can find a fellow "LID", and get the report. Extra points are awarded if you are using a base station, and the repeater is less than twenty-five air miles from you.

Step Nineteen: Use the repeater for an hour or two at a time, preventing others from using it. Better yet, do it on a daily basis. Your quest is to make people so sick of hearing your voice every time they turn on their radio, they'll move to another frequency. This way you'll lighten the load on the repeater, leaving even more time for you to talk on it.

Step Twenty: See just how much flutter you can generate by operating at handheld power levels too far away from the repeater. Engage people in conversations when you know they wont be able to copy half of what your saying. Even when they say your uncopyable, continue to string them along by making further transmissions. See just how frustrated you can make the other amateur before he finally signs off in disgust.

Step Twenty One: Use lots of radio jargon. After all, it makes you feel important using words ordinary people don't say. Who cares if it makes you sound like you just fell off Channel 19 on the citizen's Band? Use phrases such as "Roger on that", "10-4", "I'm on the side", "Your making the trip" and "Negatory on that".

Step Twenty Two: Use excessive microphone gain. See just how loud you can make your audio. Make sure the audio gain is so high that other amateurs can hear any bugs crawling on your floor. If mobile, make sure the wind noise is loud enough that others have to strain to pick your words out from all the racket.

Step Twenty Three: Start every transmission with the word "Roger" or "QSL". Sure, you don't need to acknowledge that you received the other transmission in full. After all, you would simply ask for a repeat if you missed something. But consider it your gift to the other amateur to give him solace every few seconds that his transmissions are being received.

Step Twenty Four: When looking for a contact on a repeater, always say your "listening" or "monitoring" multiple times. I've always found that at least a half dozen times or so is good. Repeating your multiple "listening" ID's every 10 to 15 seconds is even better. Those people who didn't want to talk to you will eventually call you, hoping you'll go away after you have finally made a contact.

Step Twenty Five: Always use a repeater, even if you can work the other station easily on simplex ... especially if you can make the contact on simplex. The coverage of the repeater you use should be inversely proportional to your distance from the other station.

Step Twenty Six: When on repeaters using courtesy tones, you should always say "over". Courtesy tones are designed to let everyone know when you have unkeyed but don't let that stop you. Say "over", "back to you" or "go ahead". It serves no useful purpose but don't worry, it's still fun!

Step Twenty Seven: Use the repeater's autopatch for frivolous routine calls... especially during morning or evening commute times. While pulling into the neighborhood, call home to let them know you'll be there in two minutes.... or, call your spouse to complain about the bad day you had at work. After all, the club has "measured rate" service on their phone line so they get charged for each autopatch call. Your endeavor is to make so many patches in a year that you cost the club at least $20 in phone bills. That way you'll feel you got your money's worth for your dues!

Step Twenty Eight: Never say "My name is ....." It makes you sound human. If at all possible, use one of the following phrases: a) "The personal here is ..." b) "The handle here is..."

Step Twenty Nine: Use "73" and "88" incorrectly. Both are already considered plural, but add a "s" to the end anyway. Say "73's" or "88's". Who cares if it means "best regards" and "love and kisses." Better yet, say "seventy thirds"! (By the way, seventy thirds equals about 23.3).

Step Thirty: If the repeater is off the air for service, complain about the fact that it was off the air as soon as it's turned back on. Act as though your entire day has been ruined because the repeater wasn't available when you wanted to use it. Even thought you have never paid a penny to help out with the upkeep of it.

There are more hero's on ham radio, but after CW is eliminated, old hero's
won't die, they'll just fade away... just fade away.

I just wish KB9RQZ would stop pushing his gay agenda in the radio groups.
Having to listen to him butcher the english language is bad enough.

SC

5496. Morkie, I will conceed that you know two things that I will never know...What it's like to lick my excrement off of another man's genitals, and the going welfare rates in Michigan.

GE OMs;

If anyone out there has an ORION, and is running Linux,
I have written 3 programs to interface the Orion to
the computer:

1. Tests communications between the Orion and the computer.

2. Allows you to control many of the Orion's functions from
your keyboard.

3. Downloads the Orion's memorybank to your computer and
uploads it back.

The tarball is only 200KB so most ISPs won't choke on it.

If you'd like a copy just send me e-mail: W6ESE@arrl.org

73,
W6ESE - tony

Numbered awards are NOW available for your contacts on QsoNet (DXCC, WAC, WAZ AND WAS). These awards will be NUMBERED and dated and are available for multi bands and modes as well as single bands and modes ! WHO will be # 1 ? Send an email to wb5kyk@netquincy.us for further inforamtion.

5505. Basic Dual band mobile ??

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-10 20:04:44 UTC
From: John <john_stlmo@yahoo.com>
Message-ID: <ULZeh.1348$7n3.1173@newsfe04.lga>
Source record: 6291
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.swap

My wife recently passed here Tech. license and would like to have a dual band 2mtr/440 rig in her car. Her requirements: "Will go up to 50/60 watts - Simple to operate (just turn it on, turn to (or push buttons on mic) for the desired frequency/band, and talk..." She does want the DTMF mic.

Can't get much simpler than that. She doesn't want to pick up the Hong Kong police freqs or listen to aircraft landing... :)) The simpler the better.

Any recommendations?

Thanks.

John

Well, I have seen gps units interfaced to a mcpu and lcd display that shows gps info, which can also be time in any format you want.. 2 displays whether lcd or led can be set up from the same mcpu "Basic Stamp". It is very do-able and should be low cost "under $100" for sure... i can easily do it with what I have in the shack... I also sold one of those cell-site reference gps-time units for a bunch of $$$ that I only picked up for $55 bucks a few years ago...It would of been the best thing for a shack time reference unit..

5511. FRS Radioes question

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-11 02:03:07 UTC
From: Joseph Fenn <jfenn@lava.net>
Message-ID: <Pine.BSI.4.61.0612101554350.10526@malasada.lava.net>
Source record: 6297

I bought 2 of these tiny little FRS radioes so could keep in touch
with wife when she takes her daily walks. I called the FCC
and asked them if any kind of license is required to use thses.
They said certain chnls do require FCC license which costs $75 for
a 1 year period. Chnls 1 thru 7 need this license also the
higher chnls I believe was 16 to 20 also require FCC license.
The others do not require any license or ID when used.
So I set both hers and mine to chnl 12 (frs free useage chnl).
These free chnls per docs have a range of up to 7 miles. The
FCC licensed chnls with same unit have a range up to 14 miles.
When my wife was trying to reach me from a shopping center about
10 miles away she did find a spot that worked. But next time
we tried I Could'nt hear her well only a sylable or 2.
She says after she tried 4 or 5 times, some one came up and
said this is the "POLICE" do you need help!!! How in the heck
does FCC get into the picture or better yet how does the FCC
even monitor these FRS chnls. I thought they only monitor 911.

I have bought two flavors of WWV-synced clocks recently at the big box stores. One was a small unit (2-inch display) and the other was a large analog wall clock. Both of them work great, even though one is on an interior wall in the basement. I'm truly amazed that they can hear WWV and yet the cost was under $20.

If the radios are plainly marked FRS on the model plate, they can be used on any of the frequencies without a license. If they are GMRS models, you need the license ($75) due to higher power. If they are GMR/FRS models you "may" not need license if the radios are used on FRS channels "and" the power is rerstricted to 1/2 watt ERP (About 2 watts output). I suspect yours are of the GMRS/FRS variety.

The range claims of the manufacturers are BOGUS. If they work for many blocks in an urban environment and about 2 miles over flat terrain, you are getting your moneys worth.

As far as the "POLICE". 1) If you are in Canada there is some overlap with GMRS and police on a couple of 25KHz spaced channels channels. 2) In the US some police departments installed GMRS base stations in past and even so with an FRS radio or properly licenses GMRS radio, you are free to use the channel, however. 3) You might want to change channels to avoid a dispute, simply because they have guns and hancuffs. 4) If your radio can operate on a GMRS repeater (transmit +5 MHz), you need an FCC license AND permission of the repeater operator to use their repeater.

What model do you have?

I think there is some confusion between FRS Radios and GMRS Radios and some
units cover both.

First read about FRS Radio From The FCC
http://wireless.fcc.gov/services/index.htm?job=service_home&id=family

Then read about GMRS Radios From The FCC
http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile

Then read about the dual service radios
http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile

Hope this helps
CL

Both Joseph Fenn, and CL responded with good information. That
leaves me with nothing to add, except that so-called response from the
"Police" was highly likely to be some jerk out there listening in with
his own FRS radio. Just change channels to avoid such types.

Ed K7AAT

PS: J. Fenn, pretty nice credentials you have..... !

Likely because they aren't "WWV-synced".

While in the past there were some clocks that got the time in digital
format from WWV, the more recent wave of "atomic clocks" receive WWVB
at 60KHz. The low frequency allows for strong propagation throughout
much of the day, and penetration where higher frequencies might
get shielded out.

Sure... if you're up at 3000 feet on a mountaintop, with a clear view
to the mountaintop on which the other person is standing :-)

More commonly, in a city or in the woods, FRS radios will work
tolerably well for a quarter-mile or so, often to half a mile. Beyond
that, they're marginal to useless.

If you have a GMRS (license-required) radio, which actually puts out a
full 5 watts or so on the GMRS channels (and *very* few of the
dual-mode radios do) you might go a couple of miles in city terrain.
Most of the dual-mode radios have no more power on the GMRS
frequencies than on the FRS and shared frequencies.

Claims of 7 - 14 miles for these radios are sheer marketingbabble -
they're incredibly optimistic.

>When my wife was trying to reach me from a shopping center about

The FCC itself almost certainly was not monitoring.

It might have been the police. Or, it might have been someone from a
community emergency preparedness group (CERT, or perhaps REACT) who
was monitoring and who was willing to call the police on your wife's
behalf. Might even have been an off-duty policeman who keeps an FRS
radio around to speak with her husband :-)

This FRS set came in a 2 unit package on sale for 29.95 for 2 of em.
And the instructions were explicit. I called the FCC at Washn
just to find out which chnls were restricted to fcc license and
which were not. 1 thru 7 do require FCC license for useage
and cost is $75. 8 thru 14 If I remember correctily were free use
no license required. 15 and up were also restricted to FCC
licensing. I parked on 12 and have been useing it with no
no problems as long as range did'nt exceed about 10 miles.
Instructions said limit was 7 miles coverage for the free chnls.
For the FCC chnls the range is 14 miles and the ouput power is
more than the free ones. My wife even on chnl-12 was calling
me but could'nt reach me from about12 miles away, but lo and behold
the Police answered her and asked if she was in trouble. I had no
idea the 911 people scanned those freqs too, but apparently they
do. Thats a plus far as I can see.

The "limit" has nothing to do with whether it is free or licensed. It is strictly a function of physics, terrain, and power level. If you actually get 7 miles or more, you are incredibly lucky. Under normal conditions, one mile is more like it.

> For the FCC chnls the range is 14 miles and the ouput power is
> more than the free ones.

As stated above, the range doesn't depend on whether they require a license or not. Since more power is allowed on the GMRS channels, they will have a slightly greater range. Still though, unless there is a GMRS repeater (relay station) around, the nomal range is well below the touted 14 miles.

Joe says again,
I bought them (2) in a plastic pack on sale at radio shack
2 weeks ago and they said FRS. $29.95 on their big sale day
last week Saturday. I read the data sheet that came with them
and the ranges quoted are (for the free chnls) 7 miles. Chnls 1 to 7.
and think chnls 15 on up are FCC license required. Fpr the Licensed
chnls the range is 14 miles. I chose 12 and locked both units
to 12 which is free useage. I still wonder how the 911 crew
at Hawaiian Telcom got into the act but they did. So must be
they monitor even the license free chnls. I can understand if
they somehow have a scanner working on the licensed chnls thats
a good idea for sure. You got the ranges wrong. Its
7 and 14. I live on a hill and my wife did find a hot spot at
the huge Ala Moana center and we carried on a conversation for
a few minutes then quit. Thats over 10 miles from home.
Joe

Joe says again. I did call the FCC before useing them. She
specifically stated the chnls 1-7 required the $75 dollar license!!!!
The free Chnl I was useing was chnl 12. The ranges you quoted
are not same as the specs. Free chnls range 7 miles. FCC licensed
chnls are double that 14 miles. I was able to get thru to the wife
on chnl 12 which is a free chnl although spotty. She had to roam
around on 3rd deck of the shopping center till found a spot and
we proceeded loud and clear long as she remained there. I live
on a Hill and can see the entire coast of leeward Oahu from
Diamond Head to Barbers Pt. Thats why I was able to get thru with
7 watts (as quoted in the specs). The radio itself does'nt say
anyting about GMRS but does mention chnls 1-7 require FCC license.
How the Police 911 crew managed to hear the wife I dont know.
They came on and said this the Police (she got scared and ceased
any further transmissions). Thats was on chnl 12 as I said
a no licnse required chnl.
Joe

Thanks Ed,
I had'nt thoght of that but by golly your likely right on snoopers
trying to get into the act! I'll tell the wife next time she hears
"this is the police" to reply "up yours"!!!!

5528. Re: "Atomic" clock for UTC/GMT?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-12 00:16:50 UTC
From: Joseph Fenn <jfenn@lava.net>
Message-ID: <Pine.BSI.4.61.0612111412210.13816@malasada.lava.net>
Source record: 6214

Well Dunno but I have 2 of the big ones digital also displays
indoor and outdoor temp. They are fed by wwvh just one island
away from me on Kauai. I have no problem it stays locked
right to the second. Once in a while the Kauai WWVH goes down
on both 5 and 10 mhz for hours if not days. Then the 2 clocks
loose it of course. WWV on the mainland is almost inaudible
out here most of the time except if conditions are good the
15mhz sig comes thru fairly well and the clocks sync on it.

Geez folks -- there is NO license fee or requirement for an FRS Radio --
URL:
http://wireless.fcc.gov/services/index.htm?job=service_home&id=family

There is a fee and license required for GMRS Radios -- URL:
http://wireless.fcc.gov/services/index.htm?job=service_home&id=general_mobile

Why does this thread re appear over and over again ??

I suggest you determine what kind of radio you have -- perhaps it is a
FRS/GMRS Dual Service Radio

In which case read the FCC URL above.

A telephone verbal is useless. The FCC official web site is the straight
word.

Hey thanks, Bill
I downloaded a few of your programs and installed them on a MP3 player.
My first attempt at such a thing, it all went smoothly, I listened to the
discusion
while on the treadmill and while working the weight machines this morning, I
enjoyed the conversation. I'll be adding more soon.
I bought a cheapy MP3 player at FYE, hold on now, list price is $29.99, it
is on sale for $19.99 and has a $10.00 rebate. So the final cost is about
$10.00!
Works fine but it is bare bones.
Thanks again for the feed,
Mike

Well tnxfor that info. No way I was gonna use the FCC licensed chnls
anyway. I settled on chnl 12. works out pretty well. I had to
take it back to Radio Shack, as the "SCAN" function skipped all the
free (no license needed) chnls and did'nt know how to get it on a
no license chnl like 12. The girl figured out how to do it and
once I got one unit set up on 12, then the other girl did a scan
and it automatically locked onto unit 1 on chnls 12. I live
on a hill and was able to exceed the 7 mile limit ay about 5 miles
but the wife had to go upstairs on top floor of the big shopping
center to get a solid copy on me.

5550. YS-60 Pilot lights out

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-14 23:54:02 UTC
From: David Thompson <thompson@mindspring.com>
Message-ID: <uulgh.23$pQ3.15@newsread4.news.pas.earthlink.net>
Source record: 6236

I just got a Yaesu YS-60 Watt meter that works as its supposed to but the pilot lights are out. With such a dark meter face (I have the Welz equavalent and its not as dark too) its hard to read.

I have a manual for the Welz which is mostly in Japanese
but it has a schematic.

I have two questions:

1. What are the pilot lights in the YS-60? I assume 12V but what current.
I also assume they are soldered in.

2. Is it worthwhile to get a manual for the YS-60?

Thanks in advance for the help.

Sorry you had to go through all this. Your experiences are very common.
The FCC is to blame for permitting GMRS to share FRS frequencies and allow
type acceptance of these radios. Things should have been left the same,
only allowing production of 14 channel FRS radios. Big business has to
have its way and force these low quality radios on the public, and then
conveniently confuse the customer about licensing requirements and
realistic performance.

Skilled at what? I am skilled at PSK31, MFSK, SSTV, DigitalTV, Packet, APRS, RTTY, Throb, Olivia, Domino, and even CW. So if an operator is skilled in most modes, then they are a skilled operator. You don't have to be skilled in all modes to be a skilled operator.

Awww, c'mon Slow!

To use the vernacular of the left, "It was the Exam, stupid." The mode hasn't changed... hell, it hasn't changed since the 1840's! What needs to change is your attitude about how to entice folks into the Morse Code fold. Since the government stick is gone, you'll have to sell Morse Code on its merits. And here's one last hint, you'll attract more folks if you use sugar. Good Luck.

I am actually surprised to find out it was/is Vince. He's an O.K. guy,
puts in volunteer time and is very knowledgeable. While I firmly believe
this alter personality detracted from Amateur radio (Slow Code), Vince
has done other things to advance it.

Although I know Vince is very pro Morse code, I am having trouble
believing it was him (being Mr. Slow Code)

If it was/is him, turning in his license would only be a detriment to
the community IMHO.

Wow, read through some of your blog and other pages your blog refers to.
You are quite the lighting rod. You should not be surprised to receive
much attention any many areas.

Best of luck to you.

attention is one thing

but your "friend" (or the person you are speaking well of) has in the
last few managed to insult over 300,000 of your fellow hams and likely
the future of Ham radio

sadly in America it is acceptable to blame the target of the attack
your "friend" is one those people he has stated he would rather not be

a Ham than Me allowed to use HF I sugesst he consider following
thorough on his words

Would anyone happen to have the manual for a radio shack htx-212 2 meter rig in either pdf format or in .txt? I am blind, and need to try to figure out how to set the pl tones on this rig. If you have one, or can point me to a web site, that would be great. Just e-mail to this address. Dana@panix.com Tnx.

5577. BAMA Notice

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-17 17:12:45 UTC
From: Kenneth Grimm <kgrimm@adelphia.net>
Message-ID: <0kuao21s30t1q4rk0qtottndi31pe5ba5p@4ax.com>
Source record: 6163

Notice: Effective January 1, 2007, BAMA will add only manuals with a direct connection to the tube era of ham radio. Only manuals for amateur radio transmitters, receivers, antenna tuners, antennas, keyers, etc. will be added to the collection. The only test equipment that will be added will be those items already listed on the "Needed" list and those items created especially for the amateur radio market.

While I appreciate all the contributions of those whose interest is in test equipment and military equipment, I simply cannot continue to expand the BAMA collection in these areas at this time. I will not be removing the test gear and military manuals currently on BAMA. The BAMA collection will remain intact. I just won't be adding to these areas for the time being.

I want to thank any and all of you who are reading this and have contributed to the BAMA collection. Without your time and effort, BAMA would not have been possible. Thanks again and best wishes to all for the holidays.

73,

Ken K4XL

Well bozo, this isn't a buy and sell newsgroup, it's for the discussion
of amateur radio equipment.

And even if this was for buying and selling amateur radio equipment,
you are selling guns, which makes it doubly off-topic.

I just came across an ad for these generators:

http://www.portable-gas-generator.com/

1kW, $163

Seems too cheap. I'm a big believer of "you get what you pay for" --
generally. Has anyone any experience with these? Thought? Comments?

well 2 cycle stuff is often ok but a pain to be around when it is
running in household with a few cheapinverters and marine batteries it
serve very economicaly in an emergency

It's a pretty small generator. In price per watt, it's a bit more expensive
than our 4400 watt Coleman, which cost us $500 on sale. For small, emergency
related things, I'm sure it's fine, but don't think you'll run anything like
a heater or microwave from it.

some could indeed be silent keys since some do use code

I OTOH will never called an SK except over my dead body :)

I guess repeaters in general, whether it GMRS, commercial, or Ham, will still
use CW identifiers, they even use it on satellites.. It seems strange, but it
will be that way for a long time.

5592. QRO vs. Command amplifiers

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-18 15:58:33 UTC
From: "John, N9JG" <john@Xremove.MeYgotwals.com>
Message-ID: <JUyhh.2461$eb5.1926@newsreading01.news.tds.net>
Source record: 6178

I am currently using a Drake L-4B and am very happy with its reliability and compact dimensions (the PS is packaged separately and sits on the floor in back of the equipment table). However, the L-4B was not designed to operate on 160, 17, and 12 meters.

I have run across two companies with almost identical equipment - QRO Technologies and Command Technologies. I have been told that the companies at one time were one and the same. Anyway, both companies make similar amplifiers
QRO HF-2500DX http://www.qrotec.com/index1.html

Command HF-2500 http://www.command1.com/hf2500.asp

The outside dimensions and weights are slightly different. Does anyone have any comments on these two amplifiers? I am especially interested in quality of components and construction along with ruggedness. Factory support is also an important factor. Finally, I have noticed that QRO Technologies must have sold so much equipment prior to Xmas that they have gone South until 1-Apr-07. See http://www.qrotec.com/

Any comments or advice will be greatly appreciated.

John, N9JG

Listening to the bands these days I have come to the conclusion that
many Keys have indeed become Silent although they are not physically
dead.

And yes, when more code operators die they are just as dead as any
other amateur radio operator who has passed away.

FWIW - when one "presses the mic button to talk" - they are considered to be
"KEYING" the mic. Therefore - anyone who is a ham - be they a "code" key
user OR "key" a mic - would still pass as a "silent "key" "
The code is GONE - there is nothing we can do about its demise - so lets
start PROMOTING decent Radio Skills - beginning with the vanishment of
insulting amongst the ranks first off - and those who "might" be considering
coming into the hobby.

Since my original posting I have learned that the Commander HF-2500 uses Eimac 3CX800A7 triodes, whereas the QRO HF-2500DX uses Svetlana 4CX800A/GU746 tetrodes. Some sources have stated that the IMD figures for the Eimac triode in a grounded-grid configuration are better than the Svetlana GU746 tetrode in grounded cathode grid-driven mode.

well said indeed althought still maintiain I will an SK only over my
dead body

and Intend for that never to happen even have a plan to carry it out
chinese say "man who finishes house dies" therefore I will never quite
finish my home and live forever

but seriously the attiudes and "proCoders" were one of the biggest
things working in favor of NoCode

Code use is now in the hands it should be in those that suport it .
well on second even I, and I do hate the mode personaly would wish it a
better fate than its supports are likely to contrive but for good or
ill it their problem not mine

but insulting those you are requiting ro seeking to convince was never
a good idea I hope they learn that soon

I have owned a QRO HF-2500DX since 1997. I have never owned a Command, but know many who do.

The QRO uses Russian GU74b/4cx800a tetrodes, whereas the Command uses 3cx800a7 triodes. The Russian tetrodes are Russian mil spec, and have been in good supply at extremely low prices over the last 5-10 years (though they seem to have gone up a bit lately) whereas the Command's triodes are still pretty pricey. My impression is that the money saved on the tubes has gone into a more robust power supply and band switch in the QRO.

If I had it to do all over again, I would again go QRO.

+++++++
It stays on the desk. If you want a lot of transformer, the result is
a lot of weight. I might add that, while the tune up process is a
little different, this amplifier has highly repeatable tune settings,
so you just keep a little cheat sheet to tell you the tune and load
positions for each band.

David-

When you have a home power failure, you will need more than a 1 KW generator. Your refrigerator may use less than that when running, but its compressor's startup power requirement is probably well over 2 KW. The little generator might be nice to have camping, but not for emergency home power.

This little generator would be useful for running something like a chain saw or some lights, but not electronic equipment. The power might appear to be adequate to run a couple of rigs at Field Day, but the regulation/power spikes could damage your equipment.

I saw a comparable small generator at a Big Lots store for $150. At first I was quite tempted. I researched the Big Lots "Pro Source" generators, and only came up with the fact they were sold at Big Lots. Big Lots does not have any service parts, so where are you going to get a new air filter when the time comes? (You may be lucky and find another brand's filter that can be cut to size with a pair of scissors.)

Perhaps it would serve as a toy to play with and then discard.

John,

IF I remember the old web sites both companies had a few years ago --
shortly after the split --
one took the TRIODE route (Commander) the other (QRO) the TETRODE route.

The rest is amateur radio history!

Don't have any first hand experience with these, but in general I can say that 1 KW is not much power. 2 Stroke motors also are noisy, not very fuel efficient, usually hard to start and are not very reliable. 2 Stroke motors are very light for the horsepower they produce through so I'll bet the whole thing is very light.

The price is attractive considering it's about 50% of the going rate for that size..

Hans, thanks for the information. The Acom 2000 appears to be an advanced amplifier and has received vg reviews on eham.net. It is difficult to find pricing for this amplifier, but from what I can tell it is at least $1500 (USD) more than the QRO HF-2000DX. Of course the Acom 2000 has many additional features (and complexities).

BTW, you have a very interesting website.

Hello John,

Thank you very much for the compliment.
The website is only in dutch 'cause my english is not so good but a photo
says more then 1000 words i think.
Acom 2000 amps are rare too find on the second hand marked.
For more info ... ask your friend Google , HI.

Washington D.C.-

It was announced today that Kellogg's and the Federal Communications Commission have signed a pact to issue Amateur Radio Licenses on specially marked boxes of Corn Flakes.

In this unprecedented move the FCC believes this will not hurt amateur radio but allow all individuals to receive an Amateur Radio License without having to demonstrate any skills with the exception of being able to use a pair of scissors to cut out their operating permit from the breakfast cereal box.

Kellogg's spokesperson commented that they were proud to have been selected by the government to be the issuer of licenses for Amateur Radio in the US and hope to soon make an agreement with other cereal loving countries. They also expect that will be issuing certificates of achievement for DXCF for confirmed contacts with 100 corn flakers.

Yep, geting rid of the insults just might result in more folks joining the ranks of amateur radio.

Well, it's not that extreme. Is AM gone? (No, it just isn't very popular
among the current crowd.)

Is RTTY gone? (No, it just isn't very popular among the current crowd.)

Is packet gone? (No, it just ... etc, etc, etc)

I'm going to quit now before I get too obvious :-)

"Sal"
In total agreement that radios-r-fun.

I didn't mean CW was "gone" in the sense of no longer able to be used! I
meant only in the "testing" - which has spawned months if not years of
hateful arguments - so it is pointless to remain at odds with others over
it. Sure - CW, AM, RTTY, etc - are still all there to be used and enjoyed by
those with personal preference. And as well - they should be! Use them to
your hearts content!

No it made me go down to RadiShack and show one more time how to
"lock" it. Use the MENU key first and tab thru its various
offerings until you reachthe "lock" key. It was so tiny and
did'nt look like a lock key, just a black spot on the top of
the screen. So now I got it locked and alls well.
Joe

K9YA Telegraph
The Good News About Amateur Radio

January 2007 marks our fourth year at the K9YA Telegraph.

As we wrote at the completion of our first year:

"Our success derives from you, our large, enthusiastic and devoted subscriber base worldwide, and to the writers whose contribution of personal stories-at once fascinating, humorous, enlightening and compelling-made the Telegraph staff's inaugural year one of consistent joy and fulfillment."

That truth remains unchanged, but ever more encompassing as more of you, drawn from the international ham community, have joined the Telegraph readership and lent your experience to enlighten, evoke and entertain.

The Telegraph staff continues in its fourth year-as in our first-ebullient. Thank you for your messages of praise and encouragement, and remember: we're always on the lookout for your good story, or two.

Download sample issues and subscribe for free at http://www.k9ya.org

5641. Parts with FREE shipping

Hey all,

I'm trying to clean out the parts cabinet. So free shipping on all orders until I say otherwise.

My parts are new, but old stock spurplus. They are not pulls, and they have never been used. Most are gathered at hamfests, and some are gathered from eBay, some from surplus auctions, some just show up.

See the website below for details.

5642. Which Rig?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-21 20:26:33 UTC
From: charlie <wehatespam@wymsey.co.uk>
Message-ID: <Boadndao3vFncBfYRVnyvgA@pipex.net>
Source record: 6128

In anticipation of the C & G eventually sending me a copy of my RAE I am going to purchase a QRP rig. The choice for me is between the Yaesu FT-817ND or the ICOM IC-703. Given that I live in a flat in a fairly built up area and that I will have to use a loft aerial then the difference between 5 & 10 watts is not really significant. I have enough loft space to construct a fanned dipole for 40 through 10m but also intend to do some portable & narrow boat operating.

I would be very interested to hear other peoples' experiences of these rigs, particularly with regard to the HF receivers on each rig and especially if anyone has used both. Currently my main interest is HF DX but I'm sure I will want to explore 6m and later on 2m.

Charlie.

Please welcome our new friend, Amateur Radio! Amateur Radio was recently reborn when the FCC finally agreed to remove the old outdated morse code testing requirement to get an amateur license. This was something 20 years overdue. But now amateur radio can experience a rebirth and reinvigorate itself.

CW can take its place among the other amateur radio modes which never required any special testing. Now CW is an equal among them.

Welcome - Amateur Radio - back from the dead and dying!

Hi There,
Many thanks for reading this request.
Can anyone recommend a CAT program for principally the Yaesu FRG-9600
scanner (if it included CAT control of my TS-940S, it would be perfect!).
I want to be able to store sets of frequencies and get the rig to scan them,
etc.

Obvioudsly, the cheaper the better and must run on a PC.

Many Thanks and I will look forward to any suggestions.

Robert (GM0CSN)

5651. RCI-SWR Meter

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-23 00:46:06 UTC
From: Paul <paulcolo@ghvalley.net>
Message-ID: <12oov1ln5im1o91@corp.supernews.com>
Source record: 6137

I'm having trouble with a SWR Meter on a 2995DX Ranger.
The meter movement is non-existent near the operating frequencies.
It moves when the calibration knob is rotated to the SET.
But after that.... zero movement during the SWR function.
I can force the movement if I rotate the calibration knob
during the SWR function though. I have followed the test
instructions according to the instruction manual.
> mode= AM
> MIC GAIN= min.
> RF POWER= max.
> P-t-T>>> Calibrate---pointer= SET
> ACTIVATE SWR button.
> P-t-T and read directly on the scale.

Any suggestions as to what I'm doing wrong?
This is a newly purchased unit from a private party.

> I passed my general written test 3 months ago, but failed the Morse Code
>test. Will I be able to automatically upgrade to General once the rules change
>or do I need to take a new general written Test?

As I understand it, neither. You'll need to go back to a VE session,
bring your CSCE (the certificate which documents the fact that you
passed the written exam), pay another exam fee (probably), and have
them submit the paperwork for your General. The CSCE remains valid
for one year after the date on which you passed the exam.

So, it's not automatic, but you won't actually have to retake the exam.

Likewise I'm using a D-Link with no problems. The 144/440 rig sets
about 3 feet from the router and the CAT5e gigabit network cable runs
along with the coax for a ways and then parallels it for another 40 to
50 feet.

I can set a 2-meter HT here on the desk and it'll work just find. If
I move it up against the computer cabinet it'll just open the squelch.

5658. VX7-R Squelch noise problem.

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-23 10:03:06 UTC
From: paul@telco.demon.co.uk
Message-ID: <1166868186.305707.43450@i12g2000cwa.googlegroups.com>
Source record: 6144

Hi,

I bought my VX7-R secondhand about two years ago and it has always had
a problem with the squelch.

Even with the volume set to zero I get a 'thump' noise as the squelch
operates. It sounds like a dc level is set wrongly somewhere in the
squelch mute/unmute circuitry or a cap is slowly decaying and no longer
blocking the dc.

The noise has become noticably louder over the last year and is now
uncomfortably loud when using an earpiece.

If I had a circuit diagram and board layout I could probably fix this
myself but I can't locate either.

Does anyone have a fix for this problem or the necessary diagrams?

Thanks,

Paul

There's a new TOM SWIFT group, and you're invited!

Remember this thought provoking youth science and technology fiction series?
Here is the place to meet others that were fans also. The address:
http://groups.yahoo.com/group/Tom-Swift/

We would like to invite you all to join a new Tom Swift discussion list,
launched this month:
This is a friendly gathering place for fans of any or all of the 5 Tom Swift
Series written over the last century under the pen name Victor Appleton. Any
aspects of the books and related materials are fair game, including
discussions of the stories, collecting, fanfic, model building, historical
and scientific context and anything that might be of interest to "science
minded boys" of all ages.

It is our intent to keep this as open a list as possible with only enough
moderation by diverse group of moderators to maintain a friendly
environment. Polite and civil debate is welcomed and encouraged.

Motorola Radius M216 VHF 16 channel 150-174mhz, 25 watt. Model#D33LRA77A5BK
Serial#778FNU0605 I can NOT program this radio. It will do the Amateur 2
meter band without a problem.
It is in good working order and ready to be placed into service. You get the
radio, power cable and mic, no bracket.
Picture at this link:
http://mysite.verizon.net/vzequgiy/commctr1/id11.html
$100.00 plus shipping
Cont. US only, USPS money orders only.

You will need to take a copy of your CSCE and a new exam Fee to a VE session. Fill out an applicaiton for General Glass. This is a paperwork upgrade that the VE must do. You will not automatically become a General, you must sumbit the paperwork to get it. However once you have filed the paper work you then immediatly have General class privilegdes using a /AG suffix to your call.

This seems like a good time to introduce one of my other life-long hobbies. In 1955, I accomplished one of my first major life goals. I passed all the tests for an Amateur Radio License. It was just the entry level "Novice Class" license but it allowed me to "talk" via Morse Code to people all over the world with simple equipment that I built myself.

Check the link at 1030 EST Dec 26 it appears to be broken. I am
interested in seeing it since I was licensed only a short time
afterwards. My ticket issued Jan 56, but test done in 55. I was then
K9CAH so I was also licensed in the MidWest in Wisconsin. I was
13.

Name: Kirill
Call: VE3AXC

Merry Christmas and Happy New Year everyone! I will be a subscriber of this forum from now on, so nice meeting everybody!

On this note, please allow me to stray a bit off this forum's topic but my info might still be relevant for some. I myself have been a ham for 8 years; also run a small QSL card printing business (my printishop is located in Toronto, Canada) and have a web site specifically dedicated to that www.qslcanada.com

Reason I would like to post this message on this forum is to let your group know that I have a pretty good group referral discount program.

The idea is quite simple and there is no catch.... For each HAM who is referred by you and who wishes to place an minimum order of 500 cards, you would receive 100 (custom designed) cards of the same type free of charge. The offer is transferable, so if for example you let me know that you don't need any more cards, I will be happy to print additional 100 cards for your friend free of charge (or charge for 100 cards less)

This offer may be ideal for your group or a club you belong to. For example, if you
refer say 3 HAMs who would like to print a minimum 500 cards for themselves, you would receive 300 cards as appreciation for spreading the word about qslcanada
; you could transfer it to someone as a gift ; or each of 3 Hams would only pay
for 400 cards, since each one will get 100 cards free. To sum it up, each of the referral counts as 100 free cards in any shape or form. Pse let me know if you have any questions.

So if bunch of Hams in this group who are into QSLing might be interested to giving someone a free gift or getting a good deal on the next batch, pse let me know. The offer is valid any time in future. www.qslcanada.com has quite a bit of samples, more info and e-ham reviews

PS Have got to mention this, since it did happen before, where some folks took this posting too personally. I just wanted to get this info out there ONE TIME ONLY! Please don't call me any spammer names or hate mail me. I believe this to be a fair group offer any hams by hams enterprise deserves a little exposure to start out with.

I will try to participate in this group from now on, so best 73 to everyone! Happy New Year!

I would suggest FIRST, making sure you have the latest firmware for the
D-Link router.
Know how to update the firmware properly -- it is covered on the D-Link web
site.

Sister had a wireless D-Link router and the update/upgrade of firmware
seemed to quiet down the RFI. Likely a poorly written piece of code by a
programmer -- who has never heard of RF.

No, a 604 is a wired router, I would suspect it is a poorly wired or bad cable
that is a multiple wavelength of that particular frequency... I use the 604
(non print server) and 614 (print server) routers with no problems at all.

There may be multiple revisions of the 604, with significantly
different internals. I've had similar RFI problems with some routers
and WAPs, and have concluded that some of them use buck-mode voltage
regulators (DC-to-DC converters) which put out strong harmonics of
their switching frequencies. Similar devices from the same
manufacturer, a year or two newer or older, don't have these emission
problems... I believe that the voltage converters in the trouble-free
units probably incorporate a "spread spectrum" modulator on their
switching oscillator, and thus emit a broad-but-low level of RF hash
rather than discrete birdies.

Try to connect a MFJ-929 and a Yaesu FT-857. Use a MFJ-5114Y cable to
connect.
Which parameter should I select on both for start tuning process by push the
tune button on tuner?

When select tuner on transceiver and the right transceiver selected on tuner
nothing happens.

You'll need to inform the FT-857 that it has a CAT-compatible tuner
attached. Check your owner's manual. If I recall correctly, there
are two menu items that you'll need to set. One of them tells the
radio that there's a slave CAT device attached, and the other tells it
to talk to a tuner via the CAT port.

Seems to be a problem with low budget web hosts. Good news is it's up
more than down.

When I select a tuner on FT-857 options, CAT type option turn automatically
to tuner and isn't changeable.

Since I try to connect and several options on this tuner, think I notice a
burned smell coming out from this tuner.
Works normally, maybe some device burned down by using any wrong option on
this MFJ-929.

Hi,

For my TS930 I need two MF crystal filters, type MCF 44.93 MHz (kenwood part no. L71-0234-05). Can anyone tell me where to obtain these parts ?

I just tuned into this News Group to find some and not all ham's like to speak better of there self's than they act.
I thought that was why people became Ham radio Operators and had gotten away from C.B. God I hate that C.B. I get sick thinking about it. I've been a S S B Radio Operator for a long time. Yes I prefer to that think that there are Three types of Radio. No need to go there and get my but kicked by the know it's on here. It has been said so many times no matter what the Hobby. There is always someone out there trying to take the fun out of anything good. And I just seen some of them here. I have been wanting to become a Ham operator for I'll bet at least 35 or 40 years. The code has always stopped me. And the But head's and those with attitude Overly goody two shoes crowds. I have a learning disorder. It does not make me retarded, it simply means that I learn better for me in a hands on manner. Code is plainly just to much for people like me.
Now My point to all this is once again I'm hanging on a tread, I just don't know why I would want to go into Ham and put up with these too kinds people when I'm already doing it and I don't like it any better now. The only plus that I can see at this point is more Frequencies. Ham was a Hobby that was intended to be HELPFUL IN ALL OF IT'S ASPECTS.....
Now look what it's coming to. Some don't want the no Code, other's do and if they remove the code I'm afraid it will let in all the nut's .Well my friends you folks all ready have them. And in the mean time your keeping Good honest people out. Honest people aren't Born..... It takes a Very strong willingness now days to be one.. Ask me it's hard and we don't always win so . Your art form, your hobby no matter what your calling it today is steadily going by the way side. And some of you are so caught up in yourselves that you just can't see it. Some of you are the Sign of your time. I'll Bet there are a lot of old timer's just shaking in there Graves at the way you have been presenting the hobby that they helped to grow. Kind people used to run the Ham band's and there are still some out there are you one of them. Or do you just think you are Action's speak louder and farther then the Air waves. I'm not even a Hammer and I can see that..... I'll be

listening......

5688. How to disable CW sidetone in TS-440s?

Newsgroup: rec.radio.amateur.equipment
Date: 2006-12-27 18:44:47 UTC
From: Comcast newsgroups <newsgroups2000@hotmail.com>
Message-ID: <bvKdnUuTvMS8Ig_YnZ2dnUVZ_uqvnZ2d@comcast.com>
Source record: 6074

Hello all,

I've googled this and found nothing. I want to disable the
CW sidetone, or at least turn it all the way down on my
Kenwood TS-440. I use the sidetone in my keyer instead,
and the two clash!

Anyone know if this can be done without hacking anything
up? Like a DIP-switch or similar? Or a hidden volume pot?

Thanks

Dave WB7AWK

Just got word on the BBC last nite that CW is now non exitant
in the US amaterur system. For info BBC takes over from PRI at
1000z each night except Sat/Sun at 1000Z and their second item
they cent CQ CQ CQ several times then notified the world that
CW is no longer allowed on the American Amateur bands at all.
Listen in low end of the FM radio band and its the 2nd stn
from the bottom which is (public radio) but changes to
BBC at exactly 1000z and carries them every night except
Sat and Sun.

Look for VR9 in the service manual to turn down the side tone output.

Its the only way that I can see to accomplish what you want.

Nah not really - CW is live and well -- just check the CW portion of the bands.
Remember lots of Hams don't speak each others language - but with CW and Q-Signals they can communicate the essentials

Also thousands of Hams are active during CW contests making hundreds and thousands of contacts

You really meant the requirement to pass a CW test to obtain a license is being phased out

This by no means will eliminate CW as a mode of Ham operation.

Dit Dit -- CL

You have not heard correctly. The FCC dropped the requirement,
but it is VERY MUCH legal to use on the amateur bands. I'm on every
day on all useable bands with CW and perfectly content using it.

Thanks for the info - right after I posted it, I found that myself as well. That
indeed will do the trick - now to find pot VR9 on the IF board.... hopefully
it isn't too well hidden (why didn't they bring a Sidetone volume out to the
front or rear panel? I can't be the only one who doesn't like the sound of
the Kenwood sidetone!)

Might be better to turn down the sidetone in the keyer. If you were to ever use a straight key, you would need to turn the radio side tone back up.

Do a search for a tech manual, and look for cw side tone adjustment..
The tech manual shows how, and location of pot...
There are several on google that I found!

Good thought. But actually I normally monitor my CW on my R5000
receiver that sits next to the TS-440. But I will give that some thought.
Thanks for pointing it out...

Remember that D-Link (and Linksys) will change the hardware chipsets within
a model number. For example, one product has 5 different chipsets /
versions depending upon version number and serial numbers on bar code of
product -- SO a clean model may be a different version from a dirty RF one!

Very FEW things are automatic -- just due to a rule change.
When is anything in government automatic?
You don't get US social security -- unless you file the paperwork !
Most state drivers licenses are not either -- these days !

You have to take the initiative (to FCC and VE representatives) that you are
still alive and
you are still interested (passion and desire for "radio art") in becoming
licensed radio amateur.
"Radio art" is the FCC words from recent R&O -- it is NOT a cell phone, CB,
or FRS radio service.

How about improving the 440 by a simple mod. Find the value of the inside pot, remove it, run some wires to a convenient spot and install an outside pot/knob like it should have had in the first place. You're not one of those guys who doesn't like to drill holes are you... ;)

You will have to take your paperwork into a VE session, pay the session fee, and file the paperwork. You can do this at anytime AFTER the effectivity date of the rule change. It has not yet been published in the Federal Register so the effectivity date is not known. At the time you file, your CSCE must still be valid (i.e. not more than 365 days old).

My question is, how can I drop the power on my TS-140s? I am all cw op here and seems on cw its either all or nothing, a slight movement of the rf slider brings it up to over 100 watts and its hard to control the lower range. I would like to max out at around 50 watts.

Any ideas?

Thanks, Gil

I'll bet there are even more newsgroup users who are tired of people
posting messages that have nothing to do with the topic of the
newsgroup.

I'll spell it out for you: The three newsgroups you have posted to
have nothing to do with a "moment of silence". There is newsgroup
which is a catch-all for amateur radio related items:
rec.radio.amateur.misc.

Now that you know, I trust you will post correctly in the future.

Bill, W6WRT

Howard-

I have a brand new Kenwood TM-742 that does it. I took it apart, thinking the battery might be bad but it wasn't. Then I noticed that about half of the plated-through holes on that circuit board weren't! (You have to use a magnifying glass)

Apparently temperature variations inside the car sitting in the Florida sun, causes shrinking and expansion of the circuit board, so parts that normally touch open up, removing battery power from the memory.

Perhaps it will solve the problem if I re-solder the holes with a tiny wire to connect top and bottom of the board. Unfortunately some of the holes are blocked by components on one side, and my soldering iron tip is much too big.

Either the BBC was wrong (very wrong), or you misinterpreted what the
BBC said. Nobody has forbidden US hams to use CW.

You can find out the facts by surfing to any of a number of Web sites,
the "WWW.ARRL.ORG" site being the most obvious first choice, I think.

Take a look at the following band-plan chart, updated only two weeks
ago:

http://www.arrl.org/FandES/field/regulations/Hambands_color.pdf

You'll see that CW is an authorized mode for U.S. hams in *every*
portion of *every* ham band, except for the USB-only 60-meter band.

Or, download the following:

http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf

which is the actual text of the FCC Report and Order.

Here's the situation as I understand it:

[1] In 2003, the WRC conference declared that member countries would
no longer be required by treaty to insist that hams be proficient
in Morse Code in order to transmit on frequencies below 30 MHz.
It would be up to each individual country government to decide
whether or not to require code proficiency.

[2] Quite a few countries quickly adopted rules changes, so that their
own hams could have HF privileges without having to prove that they
can use CW. In fact, Great Britain (home of the BBC) dropped the
CW requirement some time ago.

[3] After a great deal of discussion, the FCC has decided to follow
suit. In a month or two from now (probably), the rules change
will go into effect, and it'll be possible for US hams to
upgrade to General or Extra without having to pass a Morse Code
proficiency test.

[4] Nothing in the FCC rulings forbids the use of CW. Period.

[5] There are still many CW contacts, contests, and nets taking
place between US hams. CW remains one of the best available
modes for making contact under weak-signal conditions, and
is probably _the_ best such mode when you don't have computer
assistance available.

Now, there was a different FCC rules change recently... one
which was announced a few months ago, and actually took effect
back on the 16th of this month. This "omnibus" change made a
change in the band-plans for several of the HF bands. It had
the effect of increasing the portion of several HF bands in
which phone traffic can be carried, and reducing the portions of
those bands which is *reserved* for CW and other narrow-bandwidth
modes.

However, it's still legal to for US amateurs to use CW in the "phone"
portions of the band, although most refrain from doing so except under
emergency and other exceptional circumstances.

That was a very informative reply regarding the whole homebrew thing. Where
CAN you find good circuits to build, by the way? I saw a cool schematic
for an all-tube general coverage reciver, but on the same site was a
harmonic-ridden two tube transmitter schematic. One band, no less.

I'm trying cook up an interesting homebrew project. Any ideas?

Your TS140S has dirty sliders.

Have you tried tuner cleaner in the works?

I had to do this same thing to mine a couple years ago, it fixed it so I could at least power down to about 8w.

I have heard of guys even replacing the sliders. I have no idea where you'd get them though.

I doubt that any efforts will prevail. Too many are opposed to it and those that are opposed are the younger ones and potential new Amateurs. I hate to see it go, as a requirement, cause I am a true believer that you respect more what you pay for in blood or pain and suffering and although that is a stretch to equate code with pain the principal comes through and I think that's why many are not wanting it dropped. Amateur Radio though is the last bastion for the code, I believe, as the Commercial Radiotelegraph license became obsolete years ago for the maritime service and I still regret never getting that license with radar endorsement for I think I'd be living a lot happier and fatter right now with some of the jobs I saw posted back in the 80's.

I thought the code requirement was effectively dropped when they reduced the required speed to five words per minute.

No he is being realistic. We have more CB sets out there than ham sets
and they are no different to hams. If there is an emergency then CB ers
would probably do a better job than hams and with less quibling. I
think the writing is on the wall for ham radio since they dont provide
a thing for the country It would be better if home security took over
the frequency as we all now use the net instead. Have you heard anybody
on the radio lately if you get my drify

there will be more amateur operators testing for
tech then right to general at the same exam sessions.

More young and old operators will be using CW,
psk31, sstv, ssb and AM then ever before !

I compare CW to a 5 speed transmission (manual)

I use cw because I like it, I use the stick because I like it.

plenty of band space for all to use and enjoy,
use the mode you want not what others force you to use.

If you're accurately reporting what the BBC broadcast actually said,
then either the BBC announcer was completely wrong, or was being
excessively dramatic.

>Lets wait till Jan 16 or Jan17 and see what the follow up from
>FCC says.

Sure. And, I'll bet you credits to navy beans that they do nothing at
all to forbid CW.

They've already posted their "report and memorandum". They simply
have not yet *formally* published it in the Federal Register (which
they have to do in order to make it legally effective).

Go read it.

> Joe
>

The pending rule change has already been posted on the FCC site in its entirety. Go read it. It will probably be printed in the Federal Register about mid-January. It's effectivity date will probably be about mid-February.

There is nothing about banning CW. Matter of fact, it gives all Technicians the same HF privileges as the Novice & Tech Plus ops. Note that these are primarily CW privileges. The major thing it says it that element 1 (CW testing) is no longer required to for any class of license. It also corrects an omission on an earlier R & O about some data modes. There is nothing else in it. There is nothing about banning CW. There is nothing about changing band allocations for CW other than allowing the Techs the same HF privileges as the Tech Plus ops.

Generally before the FCC makes any significant ruling, they go through a lengthy process which includes an NPRM (Notice of Proposed Rule Making). This gives all interested organizations and individuals the chance to submit comments, data, concerns, etc. There has NEVER been an NPRM on the topic of banning CW.

News agencies, since they are run by people, can make mistakes.

In this case you have the opportunity to read it directly for yourself rather than relying on a news agency. Why don't you?

There's still something called a RadioTelegraph Operators Certificate
(as opposed to a Permit or License), which requires 20 wpm. "Examinees
must copy by ear and send by hand plain text and code groups in the
international Morse code",
<http://wireless.fcc.gov/commoperators/exam.html>.

Are there any radiotelegraph stations still in operation?

Read http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf
in particular Appendix A beginning on Page 18. That appendix shows the
actual rule changes to Part 97 that will take place on the effective date.
Nowhere is the use of Morse Code prohibited, only the exam requirement.

This is the text of the pending rule action you are refering to. Nothing
will change except that we will know the effective date once it is
published in the Federal Register.

After the effective date, of course! :-)

For those that recall, this will be similar to the "paperwork upgrades" we
VE teams did after April 15, 2000.

Hi Joe,

The BBC was in error (or you misinterpreted what they said). Though *testing* for Morse proficiency will end, the *use* of Morse will still be allowed. Read for yourself:
http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-06-178A1.pdf

73,
Bryan WA7PRC
